Minister—Hon. Senator G. D. Robertson — Deputy Minister—H. H. Ward

THE LABOUR GAZETTE

VOLUME XXX

FOR THE YEAR

1930

253364
8.4.31

OTTAWA
F. A. ACLAND
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1931

HD
8101
A3
v.30
cop.2

ERRATA.

On page 37, in column 2, title of third paragraph should read "Apprenticeship Classes at Kitchener-Waterloo Collegiate."

On page 612, in column 1, line 3, omit the words "or the Court". On the same page, column 2, twelfth line from bottom, for the first word "such" read "sued".

On page 614, in column 2, fourth line from bottom, for "Act of 1872," read "Act of 1871".

On page 702, in the Saskatchewan division of the table, insert "Melfort" under "Estevan", and move up one line the names listed above Melfort up to "Ontario".

On page 1131, column 2, line 6, for "Signed on behalf of Local Union 138 I.B. of" read: "Signed on behalf Hamilton Hydro Electric."

INDEX

Accidents, Industrial:

Canada—
Canadian Lumbermen's Association discusses cost of accidents in planing mills, 294.
fatal accidents in 1929 by industries, by causes, and by provinces, 345.
fatalities during fourth quarter of 1929, 234; during first quarter of 1930, 601; during second quarter of 1930, 983; during third quarter of 1930, 1350.
supplementary list of fatalities during first three quarters of 1929, 235, 243, 991; other fatalities in 1929, 601, 608, 992, 1361; supplementary list of fatalities during first half of 1930, 1359; supplementary list of fatalities occurring during 1928, 235, 243.
railway accidents in Canada in 1927, 167.
Alta.: accidents in coal mines in 1929, 920; accident statistics for 1929, 1035.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] JANUARY, 1930 [NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada at the beginning of December showed the reduction usual at this season, but the losses were on a larger scale than on the corresponding date in most of the last ten years. In spite of these losses, however, employment continued in greater volume than on December 1 in any previous year of the record. The Dominion Bureau of Statistics tabulated statements from 7,197 firms (each with at least 15 employees), employing an aggregate staff of 1,038,880 persons as compared with 1,086,380 in the preceding month; the employment index stood at 119.1, compared with 124.6 on November 1 and with 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on December 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These indexes, which are based upon the average number of employees of the reporting firms in the calendar year 1926 as 100, are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business. At the beginning of December the percentage of unemployment reported to the Department of Labour by local trade unions stood at 9.3 compared with unemployment percentages of 6.0 at the beginning of November and 4.2 at the beginning of December, 1928. The December percentage was based on the reports tabulated by the Department of Labour from 1,761 local unions embracing a membership of 212,973 persons. Reports received from the offices of the Employment Service of Canada indicated a continued decline in the volume of business transacted during November, as shown by the average daily placements effected. This was chiefly due to lessened activity in services, construction and maintenance, logging and farming. In comparison with November, 1928, a smaller decline was reported, logging under this comparison showing a gain.

The average cost of a weekly family budget of twenty-nine staple foods was $11.83 at the beginning of December, as compared with $11.75 for November; $11.31 for December, 1928; $11.17 for December, 1927; $11.18 for December, 1926; $11.56 for December, 1925; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly higher at 96.2 for December, as compared with 95.8 for November; 94.5 for December, 1928; 97.3 for December, 1927; and 97.9 for December, 1926.

The loss in working time caused by industrial disputes during December was slightly greater than that in the preceding month, and was considerably more than the loss in December, 1928. The existing disputes however, were all settled before the end of the month, none being recorded as in existence at the close of the year. Seven disputes were in existence during December, 1929, involving 1,684 workers, and resulting in the loss of 13,754 working days. Corresponding figures for November, 1929, were: 8 disputes, 823 workers, and 12,871 working days; and for December, 1928; 11 disputes, 577 workers, and 9,265 working days.

Industrial Disputes Investigation Act

No new applications for the establishment of Boards of Conciliation and Investigation under the Act were received by the Department in December. The Board that was completed last September in connection with a dispute between the Dominion Atlantic Railway Company and its employees was expected to resume its sessions in January. The application for the establishment of a Board, received in November from linemen and other employees of the Winnipeg Hydro Electric System was still under consideration as the month closed. Further particulars of the proceedings during the month are given on page 13.

97518—1½

United States conciliation service

The value of the conciliation service operating under the United States Secretary of Labour is now generally recognized, according to the Secretary's report for the past year. The department intervenes in labour disputes only on the invitation of one of the parties concerned. The force of conciliators is composed of officers specially trained for their work as peacemakers in industry. During the fiscal year 1929, 522 disputes were referred to the department for adjustment, and of these cases 385 were adjusted by conciliation, 40 were found impossible of adjustment, while in 21 cases settlements were effected before the arrival of the conciliator or the intervention of the federal representative was not warranted. In the United States, as in Canada, much of the conciliation work that is carried on must necessarily remain unrecorded. "Too much publicity not only affects the work of our officials, but often dissastrously affects the relationship of those concerned even after the controversy has been terminated. As in the diplomatic service between nations not all the real negotiations can be published, so this might be designated as the diplomatic service of American Industry." The Hon. Mr. Davis, Secretary of Labour, claims that conciliation and mediation constitute the real "American way" of keeping peace in industry. "Co-operation and good will between management and men is the real purpose of the Conciliation Service."

Joint action by British employers and workers

A further development was reported at the close of 1929 in connection with the discussions on methods of securing industrial peace which were begun about two years ago through the initiative of Lord Melchett (Sir Alfred Mond). The LABOUR GAZETTE, March, 1929, (page 265) noted the rejection by the employers' organizations of the proposals of the "Melchett-Turner" conference for the establishment of a Joint National Industrial Council. An agreement is now reported to have been reached between the Federation of British Industries and the National Confederation of Employers' Organizations, on one side, and the Trade Union Congress on the other. According to a report in the London *Times*, December 31, it has been decided that the two parties to industry will hold joint conferences to debate such questions as unemployment, industry and finance, taxation, social services, inter-Empire trade, problems of international trade, international labour questions, powers of government departments, and cognate matters. The *Times* points out that the existing trade union machinery for discussing wage and working conditions will not be affected by the new joint body, but the significance of the change is that all unions collectively now enter into relations with all employers collectively. They will consider together all important problems affecting them.

Wages, hours of labour and prices in Canada 1920-1929

Two supplements are included with this issue of the LABOUR GAZETTE. The first deals with Wages and Hours of Labour in Canada, 1920 to 1929, including the following classes of labour: (1) building, metal, printing, electric railways, civic employment, and longshoremen; (2) mining, lumbering, electric power, telephone; and (3) factory labour in various industries. The second supplement deals with the movement of wholesale and retail prices and changes in the cost of living in Canada and various other countries in 1929 and in recent years.

8-hour day in Canadian steel industry

Beginning on January 1, 1930, the Steel Company of Canada, Hamilton, began a new working schedule under which the workmen operate on three turns of eight hours each, and are also on a higher hourly rate of wages than formerly. The former schedule divided the working day into two shifts of 12 hours each where furnace operation was continuous. It is stated that the new policy will add $300,000 a year to the payroll.

The reduction in working hours is in line with other measures taken by this company for the benefit of its employees. An outline of the New Pension and Benefit Plan which took effect during the past year was outlined in the LABOUR GAZETTE, June, 1929, page 649. The company is introducing labour saving devices as far as possible, and is an active participant in the accident prevention campaign now being carried on throughout Ontario.

The 12-hour shift was abolished in the United States steel industry in 1923, this action being the outcome of a conference on the subject that had been summoned by President Harding to meet at Washington in the previous year (LABOUR GAZETTE, August, 1923, page 879).

The results obtained by the practice of a shorter working day are declared to be highly beneficial both to the employers and the workmen.

Commission to investigate social questions in Quebec

The speech from the Throne at the opening of the Legislature of the Province of Quebec on January 7 contained the following intimation of the government's intentions in regard to coming social legislation:—

"Several social problems of great importance are now up for consideration. Attempts have been made with more or less success to solve some of these in the other provinces and abroad. My ministers do not wish to be behind hand and intend to submit to you a bill appointing a commission composed of economists to study the various systems of social insurance, of foster-homes for children, of old age pensions and several other similar social questions. My ministers think that an exhaustive consideration of these different problems, in the light of experience gained elsewhere will lead to their satisfactory solution."

Old age and mothers' pensions and minimum wages in Nova Scotia

The Hon. E. N. Rhodes, premier of Nova Scotia, in the course of an address delivered at Halifax on December 17, made the following announcement of the government's policy in regard to minimum wages, mothers' allowances, and old age pensions. He said:—

"Looking to the future and the reasonable assurance of increased revenue, the Government at a recent meeting decided to establish a Board to bring into effect the Minimum Wage for Women. The personnel of this Board is now under consideration by the Government. Extreme care will be exercised in its selection, and it is our belief it will be one in which the public will have confidence and one which will deal in a just manner with this all important subject.

"At the approaching session of the Legislature a Bill will be introduced to provide for Mothers' Allowances based upon the necessities of the case and graduated upon a scale having regard to the number of dependent children.

"It is my desire to make clear the position of the Government upon another subject of vital importance to a large number of our deserving citizens, namely, Old Age Pensions. The Government favours this important social reform and has decided to establish a system of Old Age Pensions just as soon as the revenues of the Province are sufficient to warrant the payment which will be involved. With increasing industrial activity and expansion throughout the Province, with prospects of a steadily increasing tourist business, with the additional monies that will come to us through a readjustment and increase of Dominion grants and subsidies, and the revenue that will accrue to the Provincial Treasury through the operation of the Government Control system, it is my confident hope that the Government will in the near future be in a position to put into effect in this Province an Old Age Pensions system, in order that our aged citizens will be provided for. Old age pensions cannot be paid with mere promises; they require cash and the moment they can be provided without placing an undue burden upon the taxpayers of this Province, Old Age Pensions will be established."

It will be recalled that the Minimum Wage for Women Act was first enacted in Nova Scotia in 1920. It was proclaimed in force on May 1, 1924, but no Board under its provisions has so far been appointed.

British Widows' and Old Age Pensions Act amended

On December 6 the Royal Assent was given to an Act amending the Widows', Orphans' and Old Age Contributory Pensions Act of Great Britain (LABOUR GAZETTE, November, 1929, page 1210). The main provisions of the amending Act are as follows:—

Firstly, it extends the provision made by the Contributory Pensions Act for widows of men whose employment would have been insurable and who died before January 4, 1926: the requirement that they should have a dependent child is waived in the case of widows aged 55 and over, and younger widows who have a dependent child continue to receive a pension until the child reaches the age of 16, instead of 14½ as prescribed by the previous Act;

Secondly, it provides old-age pensions for the wives, between the ages of 65 and 70, of pensioners who were over 70 on January 2, 1928; under the earlier provisions, such wives have to wait until they reach the age of 70 before drawing their pensions;

Thirdly, it enables pensioners to continue to draw their pensions, and insured persons to qualify for pensions by continuing their insurance as voluntary contributors, after emigration to British territories overseas;

Fourthly, it relaxes the normal qualifying conditions for old age and widows' pensions: where the person has been insured continuously for ten years prior to reaching the age of 60, the requirement is waived that his contributions should average a prescribed number in each of the three years preceding the date on which he attained the age of 65 or on which he died, as the case may be;

Fifthly, it repeals the provision of the Act whereby children's allowances or orphans' pensions were withheld or reduced if the children had been awarded compensation under the Workmen's Compensation Act: thus the children of men killed by industrial accident will benefit under both laws.

In a speech introducing the Bill, the Minister of Health explained that it represented merely the first measure in the pensions policy of the Government, as outlined in the official program of the Labour Party.

It is estimated that the total number of widows aged 55 and over who will benefit under the new Act is 500,000, of whom about one-half have already reached the age of 55. Pensions to those who will be 60 years of age before January 1, 1931 will begin on July 1, 1930. The number of wives between the ages of 65 and 70 of pensioners over 70 is about 24,000, and the number of widows whose husbands died before the commencement of the Act and who have children between the ages of 14 and 16 is estimated at 18,000. The new pensions will involve a total expenditure during the next 16 years of about £98,500,000, of which £81,000,000 is in respect of non-contributory pensions to widows aged 55 and over. The principal Act provided for a State subsidy of £4,000,000 for the first ten years of the Act's operation. This rate will be raised by the new Act up to £9,000,000 in 1930, and gradually by an additional £1,000,000 in each successive year up to £21,000,000 in 1943, at which figure it should remain for three years. Thereafter the cost will diminish.

Old Age pensions in United States

Industrial and Labour Information, the weekly publication of the International Labour Office, in a recent issue, quotes the opinion of an American observer that there is a distinct tendency on the part of industrial employers and employees in the United States to depart from their traditional attitude towards State intervention in social problems and to recognize the need for legislative measures to reinforce voluntary effort for the well-being of the workers. An illustration of this tendency is afforded by the movement in favour of legislative provision for old age. That the question of provision for old age is exercising the minds of manufacturers in the United States is clear from the discussion on the age-limit for employment in industry which took place at the recent annual meeting of the National Association of Manufacturers. The opinion was expressed that the "older workman's day in industry has not passed" and that figures were given to show that the majority of employers had no maximum age-limit for hiring or discharging workers. At the same time it was admitted that, for reasons connected chiefly with the physical fitness and rate of output of older men, a considerable proportion of the employers have established such limits. The Executive Council of the American Federation of Labour has reported on the prevalence of discrimination against the older workers, whether by the fixing of a maximum age for engagement or by the fixing of a definite age for discharge. The Federation, at its annual meeting in Toronto, authorized the Council to pursue its investigations into this matter. At the same time, it declared itself in favour of State pensions for old age, payable at 65 and amounting to at least $300 a year. In these days when "social charges" are a constant pre-occupation of industrial employers in European countries, it is interesting to note these evidences that the problem of the worker who is too old to be accepted into or kept in employment is occupying many minds in the United States, and that there seems to be a growing disposition to seek the solution in a system of public old age pensions.

Proposed extension of mothers' allowance legislation

Women's Institutes in British Columbia are recommending the provincial legislature to amend the Mothers' Pensions Act so as to extend its benefits to any relative who undertakes the maintenance of children who are left unprovided for. It is pointed out that many children are in this condition owing to the death or disability of the mother, the family being maintained by the male parent, grandparent or some other relative, with great difficulty and at great expense. The Institutes point out that the object of mothers' pension legislation, as it exists to-day, is to keep the family life unbroken by helping the mother in the event of the loss of the father. In its extended form, as now proposed, similar assistance would be provided for a motherless family.

Dangers of navigation on Great Lakes

The *Sun-Times,* of Owen Sound, Ontario, made the following plea in a recent issue for greater protection for the sailors of the Great Lakes in view of the loss of life each year, especially in the fall.

"All sorts of protective devices are demanded for the man who is employed in the factory, the shop, etc., and they are supplied willingly, but the sailor on the Great Lakes

simply has to take his chance. There are many dangerous places along the Canadian shores of the lakes, but there is a woeful lack of assistance provided should any of the large vessels which traverse their waters go on the rocks, spring a leak during stormy weather or collide with other ships. There should be several coastguard stations established on the lakes, each with a wireless station included in the equipment, and with these firmly established there would be a feeling of security among the sailors which does not obtain at the present time. This is a matter which might very well be discussed at the coming session of Parliament."

Responsibility for water front accidents

In response to an inquiry addressed to him on behalf of the waterfront workers of New Westminster on the question of responsibility for the safety of men engaged in loading or unloading ships, the Deputy Minister of Labour of British Columbia stated recently that the provincial law administered by the Workmen's Compensation Board governs on the wharf, and that federal law (the Canada Shipping Act) and the acts incorporating the New Westminster and Vancouver harbour commissions govern on board ship.

"I fail to find", the Deputy Minister said, "any record of the sections in the federal acts for the safety and protection of men engaged in waterfront work ever having been made effective in this province. I am informed, however, that they have been put into effect at the ports of Montreal, Que., and Saint John, N.B. With the foregoing information in your possession, I respectfully recommend that you approach your harbour commission and request the appointment of a competent person with authority to inspect gear, machinery and equipment used in loading and unloading ships in the harbour of New Westminster, and where found defective to order a discontinuance of its use. Under section 11 of the Act incorporating the commissioners it would appear that sufficient authority is given. In the event of failure the Minister of Marine and Fisheries might then be approached for an appointment under the authority of section 674 or section 882 of the Canada Shipping Act."

Rescue depots in Northern Ontario mines

It was announced early in January that legislation providing for the erection of provincial rescue stations at Timmins. Kirkland Lake and Sudbury—three of the most important mining centres in Ontario—is to be brought down at the forthcoming session of the provincial legislature. The initial cost of such station will be approximately $10,000. These rescue stations are the outcome of the Hollinger fire disaster in 1928. Legislation providing for their establishment was proposed at the last session of the House, but the matter was laid over for action this year. In the meantime, construction of the station at Timmins on money advanced by the Workmen's Compensation Board, has been under way, and will be completed in a short time. The purpose of the stations is to train rescue teams at the various mines. Each station will be equipped with 12 sets of breathing apparatus, 12 all-service gas masks; one H. H. inhalator; three monoxide detectors, and a full complement of self-rescuers with accessory apparatus. There will be an official in charge of each, both night and day. Training will be so arranged, that in the event of a mine disaster it will be possible to summon the rescue crews from all three stations.

Problem of employment of physically unfit persons

At a meeting of the Province of Quebec Safety League, held at Montreal on December 20, a Committee was appointed to study the problem of the man unable to obtain work through physical disability. The members of the committee are as follows:—Dr. Grant Fleming, Dr. Frank G. Pedley, of the Montreal General Hospital, and Dr. E. Hurtubise, of the Montreal Tramways Company. It was suggested that these members might add to their number from among representatives of local employment agencies.

At the same meeting it was announced that an Association of Industrial Nurses in the Province of Quebec had been formed as a branch of the Provincial Association of Registered Nurses. The new organization will offer its services to any employer who is considering the employment of an industrial nurse for his plant.

Index number for industrial sickness

The United States Public Health Service has instituted a current index of illness among industrial workers, showing from time to time the frequency of sickness lasting for eight days or more. The "Notes on Industrial Safety and Health," on another page of this issue, give some information as to the scope of the investigation on which the figures are based. It is admitted that the recorded sickness represented in the index is incomplete, but it affords at least an approximate indication of the morbidity experience of the working population. The rates quoted are the average annual numbers of disabilities per

1,000 men employed, the tabulation covering thirteen large industrial establishments, with a combined working force of about 100,000, the establishments represented being east of the Mississippi River. The first report (Reprint No. 1316 from the U.S. Public Health Reports), recently issued, gives the rate of sickness and non-industrial injuries as 184·2 for the first quarter of 1929, compared with 133·8 for the corresponding period of 1928.

For the respiratory disease group an 86 per cent increase in frequency is indicated, due to the influenza epidemic which was still raging in the early part of 1929. Influenza itself was 163 per cent more frequent than in the same period in 1928. The pneumonia (all forms) rate was only 28 per cent above the rate of 1928. Deaths in the industrial population of the United States and Canada followed the increased frequency of sickness. The Metropolitan Life Insurance Company reports in its *Statistical Bulletin* an increase of 18 per cent in the industrial death rate in the first quarter of 1929 compared with the same part of 1928. The mortality rate appears to have been higher than during the first three months of any year since 1920. The combined influenza-pneumonia death rate showed an increase of 88 per cent over the rate in the first quarter of 1928. Disabilities which lasted more than one week on account of influenza and pneumonia in the Public Health Service's sample of the industrial population increased 147 per cent. Sickness from nonrespiratory diseases as a whole occurred at much the same frequency in the two periods.

Increase in proportion of apartment house dwellings

A report on building operations in the United States during 1928, reviewed on another page of this issue, calls attention to the rapid movement towards the "urbanization" of the population as reflected by the building permits issued during recent years. "The trend towards apartment house dwelling continues in full swing," it is stated; "in 1921 accommodations were provided for 224,545 families in the new buildings for which permits were issued during that year. Of this number 58·3 per cent were sheltered in 1-family dwellings, 17·3 per cent in 2-family dwellings, and 24·4 per cent in apartment houses. Seven years later, in 1928, it is found that 53·7 per cent of the 388,678 new family dwelling units were in apartment houses and only 35·2 per cent in 1-family dwellings and 11·1 per cent in 2-family dwellings.

Industrial employment of children in Canada

The Canadian Council on Child Welfare, at its tenth annual meeting held at Ottawa recently, adopted the report of the "Child in Employment" section, which recommended that the campaign to secure Canada's adherence to the international child labour conventions be continued with increased vigour during 1930, until ratifications of these conventions are obtained. It was decided also to carry out the following program of work during the present year; (1) to examine the numerous exemptions made from existing regulations governing seasonal industries such as fruit canning; (2) to secure the inclusion of boys in the minimum wage provisions, so as to prevent the common abuse by which low-paid males are substituted for female workers; (3) to promote the placing of juvenile immigrants, especially in commercial occupations or banks; (4) to secure the abolition of commercial home work, principally in the clothing industry, in so far as children are affected by this practice.

During the past year the Council assisted the Montreal Council of Social Agencies in carrying out an inquiry into the employment of children of school-leaving age, and into the prevalence of non-attendance at school among Protestant children in Montreal. It was resolved also to make an effort to interest the universities in a proposal to establish a summer course for institutional workers, the instructors to include members of the staffs of institutions and of the universities. If the universities should not act on this suggestion the Council will consider the possibility of itself giving such training.

Labour and industry in the United States

Recent developments and tendencies in the field on labour relations in the United States are reviewed in the annual report of the Secretary of Labour for the fiscal year ended June 30, 1929. Mr. Davis refers to the "remarkable improvements in labour conditions" during the last two or three decades. "The continuing increase in wages," he says, "which has gradually spread all over the country, has been accompanied by shorter hours of labour, better working conditions, better homes, better schools, more parks and playgrounds." These improvements, it is claimed, accompany and result from the improved machinery and labour-saving devices, machines having "done away for the most part with arduous hand labour." Another hopeful development noted by the Secretary of Labour is the "new

human relationship" between employers and workers: "We now find that both are interested in securing a full measure of production from mine, mill and factory, all of which are now producing more than ever before, with the result that there is more to divide between the producers themselves."

Mr. Davis anticipates that a solution for the unemployment problem will eventually be found, indicating that this solution may lie in the direction of a further application of the principle of the wage earner's right to a share in increased production. Already, he points out, "the wisest business men today realize that our 45,000,000 gainfully employed and their dependents, constituting as they do this great bulk of our population, are the greatest purchasers of American products, and that, accordingly, it is a poor, unjustifiable economic principle to curtail their purchasing power by refusing them a just share in the fruits of increased production." Mr. Davis notes further the recent advances that have been made in vocational training, in the rehabilitation of the men disabled in industry, and in the development of community life.

French Superior Labour Council

The French Superior Labour Council held its thirty-third annual session during November. Reference to the constitution and work of this Council was made in the LABOUR GAZETTE, January, 1927, page 8. At the recent session the Council was called on to consider resolutions submitted by the Permanent Committee, on the following subjects; posting up of labour legislation; apprenticeship contracts; regulation of labour in family workshops; and workers' health and housing. The Minister of Labour, Mr. Loucheur, who opened the session, described the previous work of the Council and emphasized the results which had been obtained. He proposed for discussion during the coming year the following questions: compulsory provision by employers of housing for workers in districts where there is no accommodation; regulation of the conditions of work of managers of branches of multiple stores; and the responsibility of contractors carrying on public services.

On the subject of apprenticeship the council recommended that the Superior Vocational Training Council should define certain trades in which apprenticeship should be made compulsory. "In such trades," it was declared, "it should be illegal to employ any child under 18 who does not possess an apprenticeship contract in writing or a certificate of vocational aptitude as laid down in the Vocational Training Act of 1919, or the diploma provided for in the Labour Code."

Changes in Trade Union Policy in Russia

Industrial and Labour Information the weekly publication of the International Labour Office, in its issue of December 9, discusses the policy of the new executive of the General Council of Trade Unions in Soviet Russia as indicated by a number of important decisions, and especially by the setting up, in agreement with the Communist Party, of "advance guards" composed of the most reliable workers from the political point of view. The function of these bodies is to assist the Communist Party in carrying out its agrarian policy, and to help to improve labour discipline and to increase individual output by organizing "socialistic competitions" and observing the results.

The Montreal Trades and Labour Council, at a meeting early in January, resolved to submit to the executive committee of the Trades and Labour Congress of Canada the issues raised by the recent judgment of the Court of Appeal at Montreal in connection with the strike of clothing workers last summer. This judgment was reported in the LABOUR GAZETTE, December, 1929, page 1442. The Court held nine members of the Amalgamated Clothing Workers jointly liable for damages caused during a strike in the clothing industry in 1926 to certain employing firms.

In view of the introduction of a new Mines Act in the Alberta legislature at its forthcoming session a conference has been arranged between representatives of the mine workers, operators, and government officials. Among the matters to be discussed are the eight-hour working day and the question of cancellation of mine certificates.

The *Quebec Official Gazette*, November 23, contains official notices of the formation of a Canadian Tailors', Dyers', and Cleaners' Association, and of a National Catholic Syndicate of Marble Polishers of Canada.

A lower retirement age for Federal employees, with optional retirement at the age of 60 after long service, is recommended in the annual report of the United States Civil Service Commission, published in December. The report states that the fact that 20·87 per cent of all annuitants now on the roll were retired for total disability before they reached retirement age, indicates that there are many in the service whose efficiency is impaired, but who cannot be retired now, their disability not being total. "A lowering of the retirement age and an optional retirement say at the age of 60, after long service, would make for greater efficiency."

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of December was reported by the superintendents of the Employment Service of Canada to be as follows:—

Stormy weather conditions had been seriously interfering with fishing operations in the Province of Nova Scotia, with the result that catches reported were small. While there were a few vacancies for logging workers being notified, operations in this industry were hampered by the weather conditions and the fact that men had left the bush for the holiday season. Winter construction activities, particularly in the City of Halifax, were rather favourable. Manufacturing, including iron and steel, showed normal activity. Although the coal mines were not working full time, production was about average for the season. Transportation reported rather heavy traffic, while trade was good. The usual number of placements of women domestic workers were being made.

In the Province of New Brunswick, while fishing catches were fairly small, this industry was not interfered with to the same extent by weather conditions as was the case in Nova Scotia. Some small orders for logging workers were being registered in the employment offices; while men were leaving the woods for the Christmas season, thus interfering with operations, fair progress was reported in this industry to date. Manufacturing in this province seemed fairly active with no outstanding feature commented upon. Apart from the City of Saint John, where construction work of some consequence was proceeding, the building industry was rather quiet. Transportation was quite active, and fair traffic through the winter port of Saint John was reported. Trade was quite favourable.

Placements in the logging industry in the Province of Quebec were quite numerous. Some slackening in the manufacturing industries in this province was noticeable; textiles in Montreal and leather in Quebec were mentioned in this connection. The condition of the boot and shoe industry in Montreal and the clothing and fur industries in Quebec was quite satisfactory, while manufacturing conditions at Three Rivers were stated to be normal. Seasonal reasons were given with reference to a general curtailment in building and construction activity, although Sherbrooke reported conditions as rather satisfactory. Railway transportation was active. Although trade was satisfactory, it was quieter than usual for the time of year. The usual shortage of women domestic workers was reported. Toward the close of the month some thousands of men were given casual employment by the City of Montreal for snow removal.

In the Province of Ontario unsatisfactory road conditions were interfering with the usual registration of orders from farmers for winter farm hands. With quite satisfactory numbers of road cutters, teamsters, pulp cutters and loaders being notified to the Ontario employment offices, many men were being placed in the northern portion of the province in the bush and logging industries. The mines in the same district continued normal operations, but very few additional workers were being taken on. Weather conditions produced the usual midwinter slackening in building and construction, but the employment situation as affecting those normally engaged in this industry was relieved to some extent by temporary employment at snow shovelling which was quite general throughout the province. Stocktaking and the holiday season combined to produce slackness in manufacturing, but indications for a resumption of normal activity after the first of the year were numerous. The shortage of women domestic workers for positions as cooks-general was again reported.

Very few orders for winter farm help were being registered with the Manitoba employment offices, this condition being due in some measure no doubt to the holiday season. Vacancies for logging workers, particularly through the Winnipeg office, were quite numerous, and large numbers of experienced workers were being placed. Building and construction, especially on inside finishing, were fairly active for the time of year in Brandon and Winnipeg. Winnipeg reports 1929 as the biggest building year since the War with prospects for 1930 decidedly favourable. Manufacturing was reported as normal. Continued activity in the mining districts of the province was reported, and the prospects for 1930 were encouraging, with the Flin Flon and Sherritt-Gordon mines expected to reach the producer class within the next year. Demands for general and casual labour were not numerous. In spite of the interference of the holiday season the demands for women domestic workers were fairly satisfactory.

Not many farm workers were being placed in the Province of Saskatchewan. Building and construction throughout this province were very quiet. General labour and casual labour were not in heavy demand, and applicants registered were quite numerous. In the

Women's Divisions conditions affecting women domestic workers were fairly satisfactory.

Toward the close of the month the demand for winter farm help fell off quite considerably in the Province of Alberta. While some construction was being carried forward in the larger centres of this province, this industry was seasonally slack. The coal mining industry was not particularly active as orders showed a tendency to decrease toward the close of December. The demand for bush workers was not heavy. Vacancies for women

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

domestic workers being notified were not numerous.

In British Columbia some logging camps appeared to be fairly busy, but demands for logging workers were not numerous, and this condition was expected to continue until after the first of the New Year. The metal mines throughout the province continued active while coal mines were working short time. Building and construction were seasonally quiet with applicants for such work fairly numerous. Manufacturing industries did not show any special activity. While conditions throughout this province were not particularly depressed for the time of the year, from the employment point of view they were rather quiet.

EMPLOYERS' REPORTS.

The seasonal losses recorded at the beginning of December, 1929, were on a larger scale than on the same date in most of the last ten years, but nevertheless employment continued in greater volume than on December 1 in any previous year of the record. Statements were tabulated by the Dominion Bureau of Statistics from 7,197 firms employing 1,038,880 persons, compared with 1,086,380 in the preceding month; the index (average, 1926=100), stood at 119.1, compared with 124.6 on November 1, 1929, and with 116.7, 108.1, 102.3, 96.5, 91.9, 96.9, 96.3 and 88.3 on December 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively.

All provinces registered curtailment, the largest recessions taking place in the Prairie provinces and Ontario. In the Maritime provinces, large seasonal reductions in employment were noted, chiefly in construction, but also in iron and steel and lumber mills, while logging, trade and services showed improvement. In Quebec, manufacturing, transportation and construction indicated declines, while logging was decidedly busier, and important gains were also reported in trade. In Ontario, employment showed a considerable decline; trade and logging registered marked seasonal increases, and noteworthy improvement took place in the tobacco, telephone and metal mining groups. Construction, transportation and manufacturing, however, reported large losses, and smaller decreases were shown in quarrying, wholesale trade and services. In the Prairie provinces, there was also a further reduction in employment; logging, coal-mining, telephones, and retail trade were much more active, while construction registered pronounced declines, and transportation and manufacturing were quieter. In British Columbia, manufacturing was dull, as were construction, logging and transportation. On the other hand, trade recorded heightened activity.

The eight centres for which separate tabulations are made showed lessened activity, the losses in Montreal being most noteworthy. In Montreal, manufacturing and construction reported a falling-off, but retail establishments afforded increased employment. In Quebec, there was a decrease, chiefly in construction and manufacturing. In Toronto, retail trade recorded improvement, while manufacturing, construction, services, communications and transportation were slacker. In Ottawa, curtailment was indicated, chiefly in construction and manufacturing, but communications afforded more employment. In Hamilton, manufacturers were decidedly slacker, while construction was busier. In Windsor and the Adjacent Border Cities, there was another large decline, mainly in manufacturing. In Winnipeg, improvement was reported in trade and communications, but manufacturing, transportation and construction released employees. In Vancouver, manufacturing and construction showed curtailment; on the other hand, trade afforded more employment.

A substantial reduction in activity occurred in manufacturing establishments, mainly in iron and steel and lumber factories, but also to some extent in food, textiles and other groups. Coal and metal mining, communications, logging and trade registered marked improvement, but gains in the last two were especially large. Transportation, services and construction and maintenance, however, reported reductions, which were very extensive in the last named.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1929.

TRADE UNION REPORTS.

A continuance of the presence of the factors which had combined to depress employment amongst trade union members, as shown by the trade union unemployment reports for the end of October, produced further declines in the figures for the end of November. These factors were (1) the decreases in employment, particularly in railway employment, consequent upon the short wheat yield in Western Canada and the arrested movement of the crop; (2) the seasonal slackening in the building and construction group; and (3) the temporary depression in the garment division of the textile trades in the province of Quebec. The first and third factors mentioned above being exceptional in

character, their influence contributed substantially toward increasing the percentage of unemployment at the end of November to 9.3 as compared with 4.2 at the same date a year ago, but a comparison with October 31, 1929, did not show such a pronounced change, as the figure at the latter date stood at 6.0. One thousand seven hundred and sixty-one local unions, with a combined membership of 212,973 were included in the tabulation. Such falling off as occurred in the manufacturing industries was not of an outstanding character except for the Quebec clothing situation previously mentioned. Steam railways, both in operations and car shops, showed further recessions, these being wholly traceable to the lessened grain hauls necessary this year. Such declines as occurred were noticeable in all provinces.

On another page of this issue will be found a report in greater detail of unemployment reported amongst trade union members at the close of November.

EMPLOYMENT OFFICE REPORTS.

During the month of November, 1929, the references of persons to employment made by the offices of the Employment Service of Canada numbered 27,417, while the placements effected totalled 25,976. Of the latter, the placements in regular employment were 12,425 of men and 3,628 of women, a total of 16,053, while the placements in casual work were 9,325. Applications for work reported by the offices numbered 42,685 of which 30,079 were of men and 12,606 of women workers. Employers notified the Service during the month of 18,394 vacancies for men and 8,590 for women, a total of 26,984. A decline is recorded in all transactions when the figures are compared with those of the preceding month and in vacancies and placements in comparison with November, 1928, applications alone recording a slight increase over those of November a year ago, the reports for October, 1929, showing 38,523 vacancies offered, 51,678 applications made and 36,066 placements effected, while in November, 1928, there were recorded 28,656 vacancies, 40,924 applications for work and 27,318 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1929, may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during November, 1929, was $16,166,385 as compared with $18,063,577 in the preceding month and with $15,830,836 for November, 1928.

The *Maclean Building Review* states that "the close of 1929 finds the building industry of Canada enjoying the results of the busiest year ever recorded. The total value of contracts awarded in the Dominion for all types of construction, as compiled by Maclean Building Reports, Limited, amounted to $576,651,800, as compared with $472,032,600 in 1928. This is an increase of 22·1 per cent over what was, till then, the record year. The monthly average is forty-eight millions as compared with thirty-nine millions in 1928. Ontario again leads the rest of the Dominion, showing a healthy increase, not only over 1928, but also over 1927, the former banner year. Quebec shows a big increase with a total equal to that of Ontario for 1928. All the western provinces show big increases for the third year in succession, while the maritime provinces maintain their usual level. Nova Scotia shows a big decline, but this is due to the fact that 1928 figures include a large pulp and power development costing $12,000,000".

The value of the construction contracts awarded throughout the Dominion in December is estimated at $32,549,000.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 9.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that industrial expansion was characteristic in Canada during the first nine months of 1929. The result was that the chief factors of economic progress reached new high records surpassing all preceding years of Canadian history. The index of industrial production maintained by the Bureau averaged 13 per cent higher in the first eleven months than in the same period in 1928, which in turn exceeded all preceding records. The gain in forestry operations, including the lumber and pulp and paper industries, was about 12 per cent. An index based on the exports and production of metals and minerals in physical volume units showed a gain of 7·5 per cent over the average for the first eleven months of 1928. The industries showing outstanding progress during 1929 included the metal mining group with marked expansion in the production of copper and nickel, while most of the metals showed gains over 1928. The automobile industry operated at a high rate of capacity during the first half of the year,

while the decline in the latter half was in excess of the seasonal tendency. The oil industry enjoyed a prosperous year with the volume of distribution far in excess of any preceding year. The rubber industry was especially active during the early months of 1929. The iron and steel industry favoured with liberal orders from the principal users, operated until recently at a high rate of capacity. The field crops of 1929 were considerably below normal and the higher prices did not offset the drop in production. The value of the principal crops was estimated at 12.4 per cent less than in 1928. The reduction in the grain crop and the slow movement to external markets caused most of the decline in revenue carloadings and the net revenues of the two chief railway systems.

EXTERNAL TRADE

A summary of Canadian trade prepared by the Department of National Revenue shows that in November, 1929, the merchandise entered for consumption amounted to $108,733,697 as compared with $116,261,197 in the preceding month and with $102,966,710 in November, 1928. The chief imports in November, 1929, were: Non-metallic minerals and products, $20,980,388; Iron and its products, $19,380,392; Fibres, textiles and textile products $15,147,261.

The domestic merchandise exported during November, 1929, amounted to $111,068,332 as compared with $119,265,558 in October, 1929, and with $167,013,618 in November, 1928. The chief exports in November, 1929, were: Agriculture and vegetable products, mainly foods, $38,828,934; Wood, wood products and paper, $24,909,517; Non-ferrous metals and their products, $13,686,529.

Strikes and Lockouts

The time loss due to industrial disputes in December, 1929, was slightly larger than that occurring in November, a strike of coal miners in Nova Scotia which involved several hundred workers increasing the figure slightly. As compared with December, 1928, the figures for December, 1929, show that, although fewer strikes occurred, over three times as many working people were involved in 1929, causing a substantial increase in time loss. There were in existence during the month seven disputes, involving 1,684 workers and resulting in a time loss of 13,754 working days, as compared with eight disputes in November, involving 823 workers and resulting in 12,871 working days' time loss. In December, 1928, there were on record eleven disputes, involving 577 workers and resulting in a time loss of 9,265 working days. At the end of the month all these disputes had terminated leaving no strikes or lockouts on record. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again somewhat higher at $11.83 at the beginning of December, as compared with $11.75 for November; $11.31 for December, 1928; $11.17 for December, 1927; $11.18 for December, 1926; $11.56 for December, 1925; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920, $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. The advance was due to increases, mainly seasonal, in the prices of eggs, milk, butter, prunes, granulated sugar and potatoes, while the prices of beef, mutton, fresh and salt pork, bacon and beans were lower. Including the cost of fuel and rent with that of foods the total budget averaged $22.11 at the beginning of December, as compared with $22.03 for November; $21.56 for December, 1928; $21.37 for December, 1927; $21.41 for December, 1926; $21.87 for December, 1925; $20.90 for December, 1924; $21.21 for December, 1923; $20.97 for December, 1922; $21.49 for December, 1921; $25.67 for December, 1920; $26.92 for July, 1920 (the peak); $21.64 for December, 1918; and $14.26 for December, 1914. Fuel was slightly higher, due mainly to advances in the prices of anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was somewhat higher at 96·2 for December, as compared with 95·8 for November; 94·5 for December, 1928; 97·3 for December, 1927; and 97·9 for December, 1926. In the grouping according to chief component materials three of the eight main groups were higher, four were lower and one was unchanged. The Vegetables and Vegetable Products group advanced, due mainly to higher prices for wheat, while the prices of coarse grains, rubber and vegetable oils were lower. Higher prices for cattle, livestock, fresh meat and eggs caused an increase in the Animals and their Products group. In this group leather and cured meat prices were lower. The Non-Metallic Minerals group also showed a slight advance, higher prices for coal and lime more than offsetting declines in the prices of glass. The groups which declined were Textile and Textile Pro-

ducts group, due to lower prices for raw cotton, raw silk and raw wool; the Wood, Wood Products and Paper group, due to declines in the prices of lumber and cedar shingles; the Iron and its Products group, due to lower prices for steel sheets; and the Non-Ferrous Metals and their Products group, because of lower prices for lead, zinc and silver. The Chemicals and Allied Products group was unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF DECEMBER, 1929

DURING the month of December no new applications for Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received by the Department of Labour.

Reference was made in the September issue of the LABOUR GAZETTE, page 975, to the establishment of a Board of Conciliation and Investigation to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees on eastern and western lines being clerks, freight handlers, station and stores department employees, etc., members of the Brotherhood of Railway and Steam ship Clerks, Freight Handlers, Express and Station Employees. The sittings of the Board were adjourned for a time, but it was expected that they would be resumed during January.

In the October issue of the LABOUR GAZETTE, page 1081, reference was made to the completion of a Board of Conciliation and Investigation to deal with a dispute between the Dominion Atlantic Railway Company and certain of its employees being clerks, freight handlers, station and stores department employees, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The sessions of the Board were adjourned for a time, but it was understood that the proceedings in connection with this Board would be resumed in January.

In the December issue of the LABOUR GAZETTE, page 1333, reference was made to the receipt of an application for the establishment of a Board of Conciliation and Investigation to deal with a wages dispute between the Corporation of the City of Winnipeg and certain of its employees being linemen, cablemen, station operators, assistant operators, lamp trimmers, maintenance men, electricians' helpers and assistants, steam engineers, chauffeurs, steam main service men, and other mechanics, members of the Hydro and Mechanical Workers' Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg. The application was still under consideration at the close of the month.

The Garment Industry in Canada

The high rank of garment manufacturing among Canadian industries is pointed out by Mr. Harry Hereford, N.S.I.E., in the course of an article contributed to the *Credit Men's Journal,* December, 1929. Mr. Hereford describes the organization and work of the Canadian Association of Garment Manufacturers, a national body established in 1921, and now including within its membership the leading manufacturers of all classes of ready-to-wear clothing for men, women and children. "The manufacturing of clothing," he says, "takes first place amongst Canadian industries, the annual gross value of its products being in the neighbourhood of $150,000,000, with a payroll covering about 50,000 employees. It is true that pulp and paper, flour and meat rank somewhat higher in gross value but these commodities are largely exported, whereas the 150 million dollars worth of clothing is manufactured in Canada for Canadian consumption. This large figure is not surprising when it is realized that clothing represents about 18 per cent of the average family budget."

The writer describes some of the recent activities carried on by the Association on behalf of its members in connection with the sales tax and the tariff and also on the subject of existing or proposed legislation affecting the textile trade, express rates, etc. The association maintains a supply department for purchasing commodities in bulk, and renders various expert services to individual manufacturers.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1929

THE number of strikes and lockouts in existence in Canada during December was seven, as compared with eight in the preceding month. The time loss for the month showed an increase over that in November, however, a strike of coal miners in Nova Scotia involving several hundred men having increased the figure slightly. Compared with December, 1928, the figures for December, 1929, show that while fewer strikes occurred over three times as many workingmen were involved, causing a substantial increase in time loss.

Date	Number of disputes	Number of employees involved	Time loss in working days
*December, 1929.....	7	1,684	13,754
*November, 1929.....	8	823	12,871
December, 1928.....	11	577	9,265

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Five disputes, involving 911 workpeople, were carried over from November, and two disputes commenced during December. All of these seven disputes terminated during the month, four being in favour of the employer, and the result of three being recorded as indefinite. The dispute involving coppersmiths in Toronto carried in the table of strikes and lockouts terminated during November in favour of the employer, but this information was received in the Department too late for inclusion in the December issue of the LABOUR GAZETTE. At the end of December, therefore, there were no disputes recorded as strikes or lockouts.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926; plumbers, Kingston, Ont., April 2, 1928; photo engravers, Toronto, Ont., January 7, 1929, and moulders at Lachine, P.Q., May 2, 1929.

On November 15 in a shingle mill in New Westminster, when the management demanded that the employees wait for the payment of wages, or as an alternative accept a reduction of ten per cent in order to tide the mill over a dull period, some of the employees ceased work and were paid off. The mill was, therefore, closed down one day after which work was resumed under the conditions prior to the dispute. This information, however, was received too late to be included in the December issue of the LABOUR GAZETTE.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

PULPWOOD CUTTERS AND CAMP WORKERS, NORTHERN ONTARIO.—This strike in the vicinity of Port Arthur and the Pigeon River District, including Griff, Shabaqua, Mabella, Shebandowan Lake, etc., for an increase in wages, was called off on December 18, the strikers, being replaced by workers brought chiefly from Winnipeg by the employers, returned to work or sought employment in other camps.

MOULDERS, MONTREAL, P.Q..—During December this dispute is recorded as terminated, employment conditions being no longer affected.

COPPERSMITHS, TORONTO, ONT.—This dispute, commencing October 1 for an increase in wages, was called off by the union on November 19, the strikers resuming work under the same conditions as before the dispute. Information as to the termination did not reach the Department in time for the December issue of the LABOUR GAZETTE covering conditions during November.

SILVERSMITHS, TORONTO, ONT.—This strike, for a signed agreement with an increase in wages and the forty-four hour week, was called off by the union on December 31.

STAGE HANDS AND MUSICIANS, OTTAWA, ONT. —These disputes, involving stage hands from October 28 and musicians from November 11 and which followed a proposal as to a reduction in wages, terminated on December 14, the theatre involved having closed down on that date. On December 28, however, the theatre was reopened by a new company which signed agreements with the two organizations providing for conditions as before the dispute.

COAL MINERS, NEW WATERFORD, N.S.—Part of the employees in the colliery ceased work in protest against the employment of certain workmen taking the places of other employees transferred to other work by the management. After three days work was resumed, the management stipulating that none of the employees whose work was the cause of the dispute should be permitted to work until the matter had been settled.

CIGAR FACTORY WORKERS, TORONTO, ONT.—In a cigar factory a number of strippers, females, ceased work along with the forelady complaining that the machines which were used (piece work) were inefficient. The management held that mechanics attending to these had reported them in proper working condition. Within a few days the company had replaced the strikers by promoting others in the establishment and by engaging new staff but some of the strikers were later taken back.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1929*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress prior to December, 1929.			
LOGGING—			
Pulpwood cutters and camp workers, Northern Ontario.	800	10,000	Commenced Oct. 14, 1929; for increase in wages. Terminated Dec. 18, 1929; in favour of employer.
MANUFACTURING—			
Iron, Steel and Products—			
Moulders, Montreal, P.Q.....	13	50	Commenced May 2, 1929; for increase in wages. Employment conditions no longer affected by Dec. 31, 1929.
**Other Metal Products*—*			
Silversmiths, Toronto, Ont....	86	2,000	Commenced Oct. 25, 1929; for increase in wages. Terminated Dec. 31, 1929; in favour of employer.
SERVICE—			
Recreational—			
Stage hands, Ottawa, Ont.....	6	72	Commenced Oct. 28, 1929; against reduction in wages. Terminated Dec. 14, 1929. Indefinite.
Musicians, Ottawa, Ont.....	6	72	Commenced Nov. 11, 1929; in sympathy with strike of stage hands. Terminated Dec. 14, 1929. Indefinite.
(b) Strikes and Lockouts Commencing during December, 1929.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, New Waterford, N.S.....	750	1,500	Commenced Dec. 17, 1929; against transfer of certain workmen to other places. Terminated Dec. 20, 1929. Indefinite.
MANUFACTURING—			
Tobacco and Liquors—			
Cigar factory workers (strippers), Toronto, Ont.....	23	60	Commenced Dec. 6, 1929; against alleged inefficiency of machines for piece work. Terminated Dec. 10, 1929; in favour of employer.

* Strike of coppersmiths, Toronto, Ont., October 1, 1929, for increase in wages, terminated November 19, 1929. See text.

The General Electric Company recently adopted a new pension scheme under which the employees have the choice of two policies, one given free by the company, another paid for entirely by the employee. The premium paid by the company on the free policy is inflexible, but the benefit decreases reversely with the age of the insured at the time of application. If he is 28 or less at the time he receives the free policy, the latter's face value is, say, $500; if he is 40, it is only $440, etc. On the other policy, the premium paid by the employee amounts to fifty-eight cents per $1,000 per month if he applies at the age of 20 or less, and increases with his age at the time of application, but does not increase during the time of his employment.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1929, in the review of Strikes and Lockouts in Canada and Other Countries, 1928. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain and Northern Ireland

The number of disputes beginning in November was 33, and 18 were still in progress from the previous month, making a total of 51 disputes in progress during the month, involving 15,000 workpeople and resulting in a time loss of 139,000 working days. Of the 33 disputes beginning in the month, 10 arose out of proposed reductions in wages, 8 on other wages questions, 9 on questions respecting the employment of particular classes or persons, 3 on questions of trade union principle and 3 on other questions. Settlements were reached in 34 disputes, of which 8 were in favour of workpeople, 16 were in favour of employers, 10 ended in compromises; in two other cases work was resumed pending negotiations.

Australia

The dispute involving coal miners in New South Wales, which began March 31, continued during December. On December 17, the New South Wales government opened one of the largest mines, and this was the occasion for a riot in which one striking miner was killed and several other persons injured.

France

Statistics for the first quarter of 1929 show that 67 disputes, involving 24,577 workers, began in January; 55, involving 14,799 workers began in February, and 125 disputes, involving 16,216 workers began in March. Of the total number of 247 disputes beginning in this quarter, 175 were due to demands for increased wages, 10 over other wages questions, 24 for the reinstatement of discharged employees and the others for various other causes.

Netherlands

The number of disputes beginning in the year 1928 was 195, involving 15,200 workers and resulting in a time loss of 638,000 working days for the year.

New Zealand

For the first nine months of 1929, the number of disputes reported was 39, involving 42 firms and 4,911 workers. The total time loss in this period was 11,924 working days and the approximate loss in wages was £12,034.

United States

The number of disputes beginning in October was 61, and 68 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 9,366, and the time loss was 289,684 working days.

A strike of coal miners in the vicinity of Taylorville, Illinois, is reported to have lasted from December 9 to December 18. The number of workers involved was between 1,000 and 3,000. The strike was an unsuccessful attempt on the part of the National Miners' Union, a newly formed body of former members of the United Mine Workers, to secure a 30-hour week with a minimum wage of $35 per week.

Industrial Survey of Edmonton, Alberta

During 1929, the Industries Committee of the Edmonton Chamber of Commerce conducted an industrial survey of the city for the year 1928, showing the extent of industrial undertakings during that year together with the corresponding figures for 1927. The survey shows an increase in payroll of over 13 per cent for 1928 over 1927, and an increase in production of almost 22 per cent. The following table gives some of the results of the survey:—

Manufacturing Firms.	1927	1928
Number of firms reporting.	192	197
Capital employed	$13,398,150	$15,613,438
Male employees	3,689	4,177
Female employees	978	1,340
Annual payroll	$ 5,365,529	$ 6,065,053
Material used	$17,893,329	$22,205,227
Output	$27,648,957	$33,719,195

Of the 197 firms reporting for 1928, 72 had from 1 to 5 employees; 55 had from 6 to 10; 25 had from 11 to 25; 19 had from 26 to 50; 13 had from 51 to 100; 13 had over 100 employees.

COMBINES INVESTIGATION ACT

Investigation into Alleged Combine in Plumbing and Heating Industry in Ontario

THE second report of Mr. Gordon Waldron, K.C., appointed as a commissioner under the Combines Investigation Act to investigate an alleged combine in the plumbing and heating industry in Ontario, has been received by the Registrar of the Combines Investigation Act and was made public by the Minister of Labour on December 21, 1929. The last sitting of the commission was held in private at Toronto on December 18, 1929. The evidence taken previous to this date before the commissioner was heard in public, commencing in Windsor and district on August 12, 1929, and the proceedings of the investigation received wide publicity throughout the press of the country. The examination of witnesses before Mr. Waldron and the hearing of counsel for witnesses occupied fourteen days in Windsor and district, nine days in London, Ontario, and twenty-nine days in Toronto. In Fort William and Port Arthur an inquiry into the alleged combine was conducted in private by Mr. F. W. Griffiths, K.C., acting for the commissioner.

An interim report transmitted by Mr. Waldron to the Minister of Labour on October 31, 1929, was made public, together with the final report of the commissioner on December 21. The interim report conveyed the commissioner's findings on fraudulent practices alleged to have been discovered in connection with tenders on certain plumbing and heating contracts in London, Ontario.

The investigation concluded in December was authorized by Order in Council P.C. No. 1311, which follows:—

MINUTE of a Meeting of the Committee of the Privy Council, approved by His Excellency the Governor General on the 19th July, 1929.

The Committee of the Privy Council have had before them a report, dated 16th July, 1929, from the Minister of Labour, submitting as follows:—

That representations have been made to the Minister of Labour to the effect that the Amalgamated Builders' Council, an organization which includes in its membership plumbing and other contractors and dealers in the building trades in Toronto, London, Windsor, Fort William and Port Arthur, co-operating with the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, and the persons hereinafter named or referred to, is a combine within the meaning of the Combines Investigation Act;

That the Registrar of the Combines Investigation Act has made enquiries into the said alleged combine, and reports that he has reason to believe and does believe that the Amalgamated Builders' Council, co-operating with the Canadian Plumbing and Heating Guild and the persons hereinafter named or referred to, is a combine within the meaning of the said Act;

That the Minister deems it expedient in the public interest that a Commissioner be appointed under the powers conferred by the said Act to investigate the said alleged combine and the business of the persons who are or who are believed to be parties or privy to the said alleged combine.

The Minister, therefore, recommends that, under and by virtue of the powers conferred by the said Act, Gordon Waldron, one of His Majesty's counsel learned in the law, of the City of Toronto, in the Province of Ontario, be appointed a Commissioner under the said Act, with all the powers and authority thereby conferred, to investigate the business of the Amalgamated Builders' Council, and the business of the Canadian Plumbing and Heating Guild, and the business of the Dominion Chamber of Credits, and the business of the persons named in the schedule attached, and the business of any and all other members of the Amalgamated Builders' Council or of the Canadian Plumbing and Heating Guild, and the business of any other person who is or is believed to be a member of the said alleged combine or a party or privy thereto.

The Committee concur in the foregoing recommendation and submit the same for approval.

Report of Commissioner

The report of Mr. Waldron, submitted after an investigation which extended over a period of five months, states that a combine in violation of the Combines Investigation Act has been found to exist among certain persons engaged in the plumbing, heating, and sheet metal trades in Ontario. All persons who joined the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, Limited, and the Amalgamated Builders' Council, together with the officers operating the Toronto Plumbing and Heating Contractors' Union, are found by the commissioner to have been parties or privies to, or to have knowingly assisted in the formation or operation of a combine within the meaning of the Combines Investigation Act. Of these persons, one hundred and thirty-seven are listed as having been given an opportunity to make representations on their own behalf before the commissioner. The list contains the names of 103 individuals and 34 companies, located in Windsor, London, Toronto, Port Arthur and Fort William. Those in Toronto include fifteen officers and three employees of the Canadian Plumbing and Heating Guild, the Amalgamated Builders' Council, the

Dominion Chamber of Credits, Limited and the Toronto Plumbing and Heating Contractors' Union. With the exception of Louis M. Singer, K.C., these officers are plumbing and heating contractors. Of the three names of employees of the alleged combine, one is that of W. F. O'Connor, barrister. The remainder of the Toronto list consists of twenty-eight companies and seven persons engaged in business as manufacturers or jobbers of plumbing and heating supplies, with places of business in Toronto. Of forty-six persons in Windsor and district included in the list referred to above, twenty-five are plumbing and heating contractors, eleven are sheet metal and roofing contractors, and nine are jobbers of plumbing and heating supplies. The London list consists of twenty-five plumbing and heating contractors and five manufacturers or jobbers in this industry; while nine plumbing contractors and one jobber of plumbing supplies are listed as Fort William and Port Arthur members of the combine who received opportunity to make representations concerning their alleged complicity. Two officials of the journeymen plumbers' labour union are also stated to be involved in the alleged combine.

The Amalgamated Builders' Council, the Canadian Plumbing and Heating Guild, and the Dominion Chamber of Credits, Limited, have been referred to in the August, 1929, and December, 1929, issues of the LABOUR GAZETTE, in reports of this investigation.* The Toronto Plumbing and Heating Contractors' Union, the fourth organization referred to in the report as having certain members involved in the alleged combine, was an association of Toronto plumbing and heating contractors with registration under the Trade Unions Act dated May 21, 1929. The formation and registration of this plumbing contractors' association took place in the settlement of a strike of the members of Local Union 46 of the United Association of Plumbers and Steamfitters who were employed by non-members of the A.B.C., the employers' association registered under the Trade Unions Act on June 8, 1928. This strike was called on May 1, 1929, for the purpose of forcing such non-members to join the A.B.C., which had secured an exclusive agreement with the local journeymen plumbers' union. A compromise settlement was effected with the approval of the Minister of Labour, and a new agreement was effected by Local Union 46 with the Toronto Plumbing and Heating Contractors' Union, which was formed and registered under the Trade Unions Act for the definite and limited purpose of carrying out the labour agreement. The Toronto Plumbing and Heating Contractors' Union was joined by the Toronto members of the A.B.C. and by the non-members whose journeymen plumbers were on strike.

Mr. Waldron reviews in his report the evidence taken in the course of the investigation, and outlines the organization and operation of the above mentioned groups comprising the alleged combine. The methods and amounts by which prices were enhanced and the means by which trade was otherwise restrained or injured to the detriment of the public are reported in detail with respect to each of the cities where the alleged combine was in operation at the time of the investigation. It is found that there was, from the date of the convention at Hamilton at which the Canadian Plumbing and Heating Guild was organized, "that is, from June 11, 1927, to the date of the commencement of the operation of the Amalgamated Builders' Council, a combine detrimental to the public in contravention of the Combines Investigation Act and of Section 498 of the Criminal Code. . . . There was agreement at Hamilton to remedy the alleged conditions of the plumbing and heating trade, and there was agreement as to the methods or means of remedy. These were to raise the prices of materials and work to be paid by the public, to limit competition among operators in and out of the Guild, and to compel the jobbers and manufacturers, members and non-members, to respect the so-called sales policy or doctrine of the channels of trade."

"I find and report that there was, during the A.B.C. period, a combine detrimental to the public in contravention of the Combines Investigation Act and Section 498 of the Criminal Code. The Guild was maintained and operated through this period and its character and membership were not altered by the registration and operation of the A.B.C. The changes made after the registration of the A.B.C were (1) the abandonment of the pretence of inividual action, and (2) the making of agreements with the labour unions of Windsor and Toronto by which these professed to contract that their members would not work for any but members of the A.B.C., that is, members of the Guild. I reject the contention made before me in the course of the investigation that registration of the Amalgamated Builders' Council as an employers' union under the Trade Unions Act of 1872 rendered the members immune from criminal responsibility for all that was done because all that was done was in restraint of trade."

At the head of the organizations constituting the alleged combine was Louis M. Singer, K.C., of Toronto, in the office of Commissioner. Mr. W. F. O'Connor, barrister, was associated with Mr. Singer and in his employ from June, 1927. The alleged com-

*LABOUR GAZETTE, August, 1929, p. 868; December, 1929, p. 1338.

bine operated through branch organizations, located at Toronto, London, Windsor and district, Fort William and Port Arthur, and at other points where they have since ceased to act. It is pointed out by Mr. Waldron that members of the alleged combine did not become members of the two incorporated companies, the Canadian Plumbing and Heating Guild and the Dominion Chamber of Credits, Limited. "The Canadian Plumbing and Heating Guild, a non-share company, was incorporated in Ontario on June 30, 1927. The object is not clear. It may have been to provide a formal statement of beneficent and lawful purposes or it may have been to carry on the combine as a non-share company. If the latter intention was held, it was at once abandoned because no persons or companies joining the Guild became members of this company. The membership was by the charter limited to fifty. There is no minute or evidence that anyone was made a member of this company, and Singer notified those who joined the Guild that he would not be under their control and that they would have no interest or share in the company's finances or management." "The power of expulsion from the combine was retained by Singer, and there was expulsion for non-payment of fees, cutting prices, non-disclosure of tenders, lack of financial ability and disobedience to the rules as Singer had announced."

"There is still another noteworthy element of the structure of this organization put in operation as early as June, 1927. That was the list or the sending out of lists from time to time, of members of the Guild at first, and later of the D.C.C. and A.B.C., to operators, jobbers and manufacturers, who had joined the combine. A more unfair weapon in the circumstances could hardly be invented. When these lists were received, a jobber finding an operator not on the list would have notice that he might not sell to him, and an operator finding the name of a jobber or manufacturer not on the list would have notice that he was not to buy that jobber's or manufacturer's wares."

Manufacturers and jobbers of plumbing supplies who had subscribed to the Canadian Plumbing and Heating Guild, withdrew their affiliation with that body, alleging fear that the operators might involve them in a breach of the Combines Investigation Act. The manufacturers and jobbers joined instead the Dominion Chamber of Credits, Limited, a share company incorporated by Mr. Singer on September 8, 1927, for the stated purpose of selling credit information to its subscribers. Mr. Waldron reports "that the jobbers and manufacturers hereinbefore mentioned joined the combine, some of them joining, in the early stages of the combine, as they thought the Canadian Plumbing and Heating Guild, and later with others passing to an alleged association with or membership in the D.C.C. They joined with knowledge of what the combine was about and with knowledge of its purposes to enhance prices, limit competition, boycott the jobbers and manufacturers and oppress the public. Almost without exception the jobbers and manufacturers have represented to me that they withdrew from the Guild upon discovery of the use of lists or upon discovery of the unlawful action of the combine." "It is just to say, on behalf of the jobbers and manufacturers, that in the formation and operation of this combine, their position was extremely difficult. They were pursued, dogged and threatened by members of the Guild with boycott, if they disregarded the sales policy or channels of trade. They were boycotted, many of them; Anthes, who had been selected because of his integrity to be chairman of the jobbers and manufacturers, exposed himself to boycott, and he was boycotted in Windsor. It is quite clear that any jobber or manufacturer who had resisted this combine and refused to sign acceptance of the sales policy would reasonably have regarded himself as in danger of great financial loss."

The third branch of the alleged combine, the A.B.C., was then devised, Mr. Waldron finds, as a means of more effective discipline by the alleged combine. The A.B.C. was registered under the Trade Unions Act, R.S.C., 1927, c. 202, on June 8, 1928, and members of the Canadian Plumbing and Heating Guild became members of the A.B.C. Through the provisions of the Trade Unions Act the promoters of the alleged combine planned to circumvent the provisions of the Combines Investigation Act and Section 498 of the Criminal Code against agreements fixing prices, monopolizing or restraining trade to the detriment of the public. The organizers of the A.B.C. planned ultimately to include within their membership, if possible, all branches of the building trades, and to extend the organization on a nation-wide basis. Under Mr. Singer's direction the organization of an electrical contractors' section of the A.B.C. was in process in Windsor and district when the investigation of the alleged combine was commenced.

Discipline was to be effected under the A.B.C. system "(1) by enabling the locals to resolve openly to boycott jobbers and manufacturers who ignored the channels of trade or the sales policy of the combine, and (2) by effecting agreements with union labour, by which union labour would bind itself not to

work for any but members of the combine. It was planned that, by the use of these weapons of discipline, the jobbers would be forced to obey and the operators facing the loss of material and labour would be destroyed or forced into the Guild."

A boycott resolution was passed by each of the two local sections of the A.B.C. in the Border Cities, namely the plumbing and heating contractors' section and the sheet metal and roofing contractors' section. By these resolutions both sections stated their intention of refusing to buy goods from any person selling locally plumbing supplies, or, in the case of the sheet metal contractors' section, sheet metal supplies, to persons other than members of the local sections of the A.B.C. The resolution of the plumbing contractors' local section was passed on October 8, 1928, that of the sheet metal contractors' section was passed on June 14, 1929; the latter association having been formed early in 1928 and having been granted a local section charter from the A.B.C. dated June 10, 1929. The Border Cities zone of the Canadian Plumbing and Heating Guild had become the local section of the A.B.C. in that centre by a charter issued by the A.B.C. head office in Toronto in 1928 and dated September 25, 1928. Copies of these boycott resolutions were sent to the firms supplying such goods in Windsor and district and the terms of the resolutions were then enforced. Similar action was taken through a boycott resolution of the same nature passed by the local section of the A.B.C. in Fort William and Port Arthur.

Labour agreements were secured in Toronto and in Windsor and district by which the local branches of the journeymen plumbers and steamfitters' international union agreed to work only for members of the plumbing contractors' local sections of the A.B.C. Under the circumstances which prevailed, the commissioner states in his report that these agreements were in contravention of the Combines Investigation Act and section 498 of the Criminal Code.

The report states that "The true purposes of the registration, fraudulently concealed, were to enable the boycotting of jobbers and manufacturers despite the Combines Investigation Act, and the discipline of expelled or non-joining operators, by depriving them of both materials and union labour. The A.B.C. did not take the place of the Guild, but was merely an attachment or device added to make the Guild more efficient in the realization of the objects for which it had been promoted." Mr. Waldron advises that the registration of the A.B.C. was null under section 6 of the Trade Unions Act and ought to be so declared at once.

Concerning the Toronto Plumbing and Heating Contractors' Union, Mr. Waldron reports that Mr. Singer, having a majority of A.B.C. supporters installed as officers of the Toronto Plumbing and Heating Contractors' Union, proceeded to administer this association "in the same manner as the A.B.C." "The purposes (of the Toronto Plumbing and Heating Contractors' Union) were not those set out in the registration, but the true purposes were to oppress unlawfully the public and the manufacturers, jobbers and operators of the plumbing and heating trade in and out of the Guild or combine." The report therefore declares that the registration of the Toronto Plumbing and Heating Contractors' Union is null and ought to be so declared at once.

Interim Report on London Situation

The commissioner, on October 31, 1929, transmitted to the Minister of Labour an interim report respecting certain frauds stated to have been discovered in London, Ontario, during the course of the investigation, alleged to be breaches of the Combines Investigation Act and of section 444 of the Criminal Code. Section 444 of the Criminal Code provides that:

> "Everyone is guilty of an indictable offence and liable to seven years' imprisonment who conspires with any person, by deceit or falsehood or other fraudulent means, to defraud the public or any person, ascertained or unascertained, or to affect the public market price of stocks, shares, merchandise, or anything else publicly sold, whether such deceit or falsehood or other fraudulent means would or would not amount to a false pretense as hereinbefore defined."

These frauds were alleged to have been practised in London by twelve members of the Canadian Plumbing and Heating Guild and the Amalgamated Builders' Council, in the case of six local plumbing and heating contracts in 1927 and 1928. In each case the twelve plumbing and heating contractors, or certain of them, "would confer and conspire to defraud the Corporation, or persons asking for tenders, and having made the amount of the tender in the usual manner, by including the cost of material, labour, overhead and profit, each would add to his tender an amount agreed upon with the understanding that the successful tenderer would receive that sum in addition to the just amount of his tender from the person calling for tenders, and would then distribute it equally among those who were unsuccessful." In a plumbing contract for the City Hall of London in July, 1927, $4,000 is stated to have been fraudulently obtained from the Corporation of the City of London by the company securing the contract,

and to have been divided equally between the four other persons or firms tendering for the contract. An amount of $5,000 is alleged to have been fraudulently obtained in a similar manner by the same company in July, 1927, from the plumbing contract for the installation of comfort stations in a building of the Western Fair, at London, Ontario. From this sum $1,000 was paid to each of five unsuccessful tenderers for the contract. In a third case the same firm is alleged to have similarly obtained the sum of $150 in August, 1927, from a contract for the installation of a steam heating system in a private residence, and to have divided this money equally among the three other firms which had tendered for the work. A fourth case was that of a contract on the London Technical School in September, 1927, when $3,000 was equally divided by the successful tenderer among the three other firms tendering. Again, in February, 1928, $900 is alleged to have been fraudulently obtained by the plumbing firm securing a contract from a manufacturing company in London, and to have been divided among the three other firms which tendered for the contract. In the sixth similar case reported, the sum of $450 is alleged to have been divided by the firm securing a plumbing contract from a manufacturing company in London in the spring of 1928. This amount was divided among nine other plumbing firms which had tendered.

It was stated by some of the parties to the above alleged frauds, that the same were contrived and carried out on the advice of Mr. Louis M. Singer, the commissioner of the Canadian Plumbing and Heating Guild. This was denied by Mr. Singer under oath at the city of Toronto. Following the investigation in London, the above amounts were said to have been repaid to the Corporation of the City of London and to the other parties who had incurred these additional charges.

Action Following Investigation

On December 27 the commissioner's final report was forwarded by the Minister of Labour to the Attorney General of Ontario for such action as he might choose to institute, in accordance with section 31 of the Combines Investigation Act. This action was followed by the declaration of avoidance and cancellation of registration of the Amalgamated Builders' Council and of the Toronto Plumbing and Heating Contractors' Union by the Secretary of State and Registrar-General of Canada on December 31. A further reference to the cancellation of these two registrations under the Trade Unions Act will appear in the next issue of the LABOUR GAZETTE.

No decision had been received at the end of December as to whether prosecution by the Attorney General of Ontario would take place in connection with either the interim or the final report.

Legislative Program of Saskatchewan Executive Committee of the Trades and Labour Congress of Canada

A deputation consisting of Mr. H. Perry (chairman), Regina, and Messrs. A. M. Eddy, Saskatoon, William Stephenson, Moose Jaw, and H. D. Davis, Prince Albert, members of the Saskatchewan Executive Committee of the Trades and Labour Congress of Canada, waited on Premier J. T. M. Anderson and members of the Saskatchewan Government, and submitted a program of desired legislation. The program included the following recommendations:—

That the new Workmen's Compensation Act be put into operation as soon as possible with the following amendment: increase in rate of compensation from 66⅔ to 75 per cent, and the raising of the maximum earnings from $2,000 to $3,000;

The enactment of an eight-hour day law to cover all workers within the Province;

Co-operation with the Federal Government with a view to providing regulations governing the use of paint-spraying machines;

Enforcement of the provisions of the Scaffolding Act;

Enactment of legislation compelling employers who advertise for help during trade disputes to make known the existence of these disputes;

Stricter enforcement of fair wage regulations and a provision that wage rates for common labour be at least the same as that paid by the respective municipalities in which works are constructed;

Enactment of legislation providing for one day's rest in seven;

Raising of witness fees to $6 per day;

Legislation providing for the bonding of legal firms;

That the Provincial Health Act be amended to provide for examination of persons handling foods;

Reorganization of the Minimum Wage Board, with the appointment of a representative of labour on the same, and stricter enforcement of the Act's provisions;

Enactment of legislation providing for a weekly half-holiday.

WORKMEN'S COMPENSATION IN SASKATCHEWAN

Progress in Giving Effect to the Act of 1929

THE *Saskatchewan Gazette*, December 21, 1929, contained a proclamation giving effect, as from December 1, 1929, to section 2; sections 51 to 63 inclusive; sections 74 to 78; and sections 89 to 112 inclusive, of the Workmen's Compensation Act enacted in 1929 (LABOUR GAZETTE, April, 1929, page 379). Section 119 provides that the Act or any section thereof shall come into force on a date to be determined by proclamation of the Lieutenant Governor. The sections now proclaimed as being in force make provision for the establishment of a Workmen's Compensation Board and define the duties of the Board; and for the collection by the Board from employers of labour in the province of statements in reference to their several industries, these statements to be used by the Board as a basis in establishing rates of assessment to be levied on the various industrial groups for the purposes of accident insurance.

In the last issue of the LABOUR GAZETTE, page 1323, note was made of the appointment of Mr. Netson R. Craig, K.C., of Moose Jaw, as chairman of the Board. Mr. Craig on December 10 made the following statement in regard to the preparatory work remaining to be completed before the Act can become fully operative.

"While the organization of the Board is being completed," he said, "steps will be taken to have every employer prepare and transmit to the Board a statement of the amount of wages earned by all his employees during the year then last past, or any part thereof specified by the Board, and of the amount which he estimates he will expend for wages during the then current year or any part thereof specified by the Board, and such returns must be verified by statutory declaration. These returns will form the basis on which assessments to create an accident fund will be made. It will be seen at once that the returns from employers must be complete, and set out the whole payroll of the province in industries coming under the Act, before it will be possible to make an equitable assessment on the employers of the various classes as classified by the Act. Before any compensation can be paid, the assessment to cover such payments must be made and the money paid by the Board. The Legislature has not provided anything for the payment of compensation. There is authority to appropriate a small amount for the preliminary expenses of organization, but the fund out of which compensation is to be paid must be found in its entirety by the Board and in the manner above indicated.

"It is certain that the compensation provisions of the Act cannot become operative during the first quarter of 1930, and possibly not during the first half. It is suggested that every employer obtain a copy of the Act, and become familiar with its provisions, particularly sections 89 to 112 and the classification set out in schedule 1 of the Act. Copies of the Act may be obtained from the Board upon application."

WORKMEN'S COMPENSATION IN QUEBEC

Preliminary Report for 1928-29

DETAILS of the administration of the Workmen's Compensation Act of Quebec during the twelve months ending September 30, 1929, were supplied by the chairman of the Board, Mr. Robert Taschereau, K.C., at a meeting of the Province of Quebec Safety League held at Montreal on November 29. (The first report of the Board, covering the period from September to December, 1928, was reviewed in the LABOUR GAZETTE, July, 1929, page 739).

On September 30, 1929, 22,995 claims had been disposed of, and 3,712 were pending owing to consultations between the parties, or to the fact that the claimants' degree of disability had not then been established. A large proportion of these cases involved temporary total incapacity, the sum of $671,238 being paid in 13,838 claims in this group. Of this total, $466,064 was paid up by insurance companies in 10,019 claims; $201,129 by companies carrying their own insurance, in 3,776 claims; while $4,044 was paid in 43 claims, by employers who were not insured.

Indemnity for permanent incapacity, either partial or total, to the amount of $808,501, was paid in 1,521 claims, as a result of agreements made between the parties and approved by the Commission, or of decisions rendered in favour of claimants. Of the total payments, $613,184 was paid by insurance companies; $190,937 by self-insurers, and $4,380 by employers who were not insured.

The cases resulting in death numbered 109, the "rentals" or allowances to dependants that were allowed amounting to $649,213, of which $361,213 is payable by insurance companies, and $288,000 by self-insurers.

These 15,468 claims, that is those involving death, permanent partial or total incapacity, and temporary total incapacity, resulted together in a grand total of $2,128,953, of which $1,440,462 was payable by the insurance companies, $680,066 by the self-insurers, and $8,425 by employers who were not insured. These sums are exclusive of the amounts paid for medical attention, which, it is stated, would increase the figures by at least one-third.

The Board's statement includes tables giving particulars of the accidents that occurred during the year, as follows:—

Sex and Matrimonial Condition of Injured Workmen

Males:	
Married	7,822
Single	6,762
Widowed	339
Not specified	172
Females:	
Married	54
Single	306
Widowed	12
Not specified	1
Total	15,468

Age of Injured Party

Over 21 years of age:	
Total temporary incapacity	9,685
Permanent incapacity	1,228
Death	83
Minors:	
Total temporary incapacity	4,032
Permanent incapacity	280
Death	24
Not specified:	
Total temporary incapacity	122
Permanent incapacity	12
Death	2
Total	15,468

Nature of Injuries Temporary Incapacity Cases Involving Payment

Bruises, contusions and abrasions	3,806
Cuts, lacerations and punctures	4,292
Fractures	1,207
Crushes	1,319
Sprains, strains, twistings and wrenchings	1,642
Burns	582
Eye injuries	350
Hernia	127
Internal injuries	204
Concussion (brain, spine, etc.)	42
Dislocations	156
All other injuries	111
Total	13,838

Permanent Incapacity Cases

One or more toes	56
Foot	98
Leg	118
Head	19
Face	4
Eye	132
Ear	9
Nose	3
Arm	128
Hand	52
Thumb and three fingers	5
Thumb and two fingers	4
Thumb and one finger	16
Thumb	141
One finger	493
Two fingers	91
Three fingers	24
Four fingers	19
Internal organs	31
All other	78
Total	1,521

Of the 15,468 accidents which took place in all the Province, 5,570 happened in the City of Montreal, including the whole island and Ile Jésus. This represents a percentage of 37·3 per cent of the whole number of accidents.

In the City of Quebec and the County of Quebec, 893 cases were reported, representing a percentage of 5·77 per cent. This leaves a balance of 56·93 per cent for all accidents reported in all the other districts of the Province."

PROVISIONAL ASSESSMENT RATES FOR WORKMEN'S COMPENSATION IN NEW BRUNSWICK 1930

THE Workmen's Compensation Board of New Brunswick, as provided for under the Act, recently published the provisional assessments for 1930, being the estimated amounts necessary to provide sufficient funds in each of the industrial classes to meet all claims for compensation payable during the ensuing year. The provisional rates of assessment for 1930, per $100 of payroll, show a few changes from the rates for 1929 (LABOUR GAZETTE, February, 1929, page 181). These changes indicate to some extent the nature of the accident record in each group on which assessment is based.

In several of the larger industrial groups the assessment remained unchanged from last year, among these being, coal mining, which continues at $5 per $100 of payroll; manufacturing of steel and iron and its products, continues at $2; bricklaying and general construction remains at $3; sawmills, lathmills lumber yards workers and woodcutters, etc., continues at $5.

The principal changes among the industrial classifications, in the rates of assessment levied upon them for 1930, as compared with 1929, are as follows:—

Classes showing increases:

Manufacturing of cement stone quarrying, and dressing, $3 to $5.
Stone dressing or cutting, marble works and stone monument business, $1 to $1.50.
Plaster mills, 70 cts. to $1.
Logging, cutting of timber and transportation and hauling of lumber, $5 to $7.
Installation and handling of machinery, $1.50 to $2.
Manufacture of tar and tarred goods, distilling coal tar and refining products obtained therefrom, $1.20 to $2.
Manufacture of fertilizer not incidental to any other industry, $2 to $3.
Construction, installation or operation of electric power lines or appliances; electric light systems; power plants; electric railways; gas works, including natural gas, installation and maintenance, $1.50 to $2.
Operation of dry docks, including repair work on vessels, $3.50 to $4.25.

Classes showing decreases:

Steel shipbuilding and repairing, $2.50 to $2.
Sugar refineries, $1.50 to $1.
Wholesale and retail stores, general warehousing, 50 cts to 40 cts.
Telegraphs and telephone companies, office and exchange only, $2.50 to $2.
Express companies, including hazard of railway transportation, 60 cts to 50 cts.
Operation of railways, including ordinary maintenance also roadbed work, $2 to $1.50.

SOCIAL INSURANCE IN THE NETHERLANDS

THE system of social insurance in the Netherlands, which now covers old age invalidity, accidents and unemployment, has been further enlarged so as to include a scheme of sickness insurance which will take effect on March 1, 1930. This legislation is described in the current issue of the *Monthly Labour Review* (published by the United States Department of Labour) as providing for one of the most advanced systems of social insurance systems in Europe. Its special significance is said to be due to the fact that the system is based upon an exact calculation of contributions, benefits and expenses, and also because it covers the bulk of the population and is unusually flexible in its working.

Invalidity and Old Age Insurance.—This part of the system covers all persons earning less than $1,206 a year, except those less than 35 years old at the time of original employment, and those provided for by public or private pensions. Employers and employees are held equally responsible in seeing that the latter are insured, and failure to comply with the law subjects both parties to prosecution involving a fine or imprisonment. The entire contributions are made by the employer. This is done by affixing each week government insurance stamps of the required value to the insurance card of the insured. These stamps may be obtained from any local post office or labour board.

Up to July 31, 1929, the weekly contributions were based upon yearly wages and made according to the following scale:—

	Yearly Wage	Contribution
Class 1	less than $ 96.48	$0.10
Class 2	$ 96.48 to 160.80	.12
Class 3	160.80 to 241.20	.16
Class 4	241.20 to 361.80	.20
Class 5	361.80 and over	.24

According to the new scale, which came into effect on August 1, 1929, and is based upon age and sex of the insured wage earners, the weekly contributions are as follows:—

	Males	Females
From 14 to 17 years	$0.16	$0.16
From 18 to 20 years	.20	.16
From 21 years and over	.24	.20

Benefits.—Benefits are payable, after 150 weekly contributions have been made in behalf of the insured, for permanent invalidity or for temporary invalidity which has lasted continuously for a period of six months. A wage earner is considered to be an "invalid" when on account of injury, disease, or defects he is unable to earn a living such as under normal circumstances may reasonably be expected of a person of equal abilities, education, etc.

The section of the act relating to the determination of the amount of the pension is given in the Legislative Series, 1923, published by the International Labour Office, Geneva, reads as follows:—

75. (1) The annual amount of the invalidity pension and of the old age pension shall be arrived at by combination of the basic amount and the increment specified in this section.

(2) The basic amount shall be the amount arrived at by multiplying the total amount of the premiums paid by 260, and dividing the

result by the number of weeks for which the insurance has lasted. In this calculation any weeks during which an invalidity pension is received and any premiums paid for such weeks shall not be taken into account.

(3) If it is found that the insured person can show 150 or more premiums to his credit, paid for weeks which have elapsed since he attained the age of sixteen years, the weeks which have elapsed prior to the attainment of this age, and the premiums paid for such weeks shall also be left out of account in reckoning the basic amount.

(4) The increment shall amount to 11·2 per cent of the total amount paid in premiums, but shall not be less in any case than one-fifth of the basic amount.

A widow is entitled to benefit (1) if her husband was receiving invalidity or old-age benefit; or (2) if at least 40 contributions have been made on his behalf; or (3) if the widow is an invalid without prospect of regaining her normal health; or (4) if she has attained the age of 60 years. No benefit will, however, be paid if the marriage took place after the husband had reached his sixty-fifth birthday or after he had begun to receive invalidity benefit. The benefit payable to the widow is fixed at a sum equal to one-fifth more than the amount to which the deceased would have been entitled under the formula above quoted in the case of invalidity or old-age benefit.

Accident Insurance.—This system was established under an act of 1921, providing compulsory insurance against industrial accidents for all wage earners (with the exception of agricultural workers, seamen and fishermen outside territorial waters). A separate Act makes similar provision for agricultural workers.

Sickness Insurance.—The Sickness Insurance Act of 1913 was substantially amended by a new act enacted on June 24, 1929, providing compulsory insurance against sickness for practically all workers whose yearly wage is less than 3,000 florins ($1,206).

As already stated, this act will come into effect on March 1, 1930, and the amount of the contribution, which is to be made by the insured and his employer in equal shares, has not yet been definitely fixed. It is proposed, however, to fix it at 2 per cent of the wage of the insured. The amount of sick benefit is set at 80 per cent of wages, and becomes payable on the third day following that on which the sickness began. The maximum period of payment is six months; no payment is made for Sundays.

Unemployment Insurance.—Unemployment insurance is based upon a system of Government subsidies to the unemployment funds of the labour unions. These subsidies, which are fixed by law at 100 per cent of the contributions made by the members of the unions, have as a rule considerably exceeded this proportion during periods of excessive unemployment, especially in winter.

Increase of Wages in Germany

Mr. L. D. Wilgress, Canadian Trade Commissioner at Hamburg, Germany, in a report appearing in the *Commercial Intelligence Journal* (the weekly publication of the Department of Trade and Commerce) for January 4, 1930, stated that "since the stabilization of the currency in 1923-24 there has been a tendency for German wages to steadily increase. Successive increases have brought the level of wages in Germany fully up to the standard for continental Europe, and in many cases practically as high as the English standard. This movement has been effected gradually and with comparatively few labour disturbances, so that the successive wage increases have had little disruptive influence on the steady expansion of German export trade. The upward trend of German wages since 1924 has been remarkably regular, but since the middle of 1928 the movement has been at a slower pace. The wages of skilled workers at first increased rapidly and then commenced to rise more slowly. Among the unskilled group of workers the movement has been more regular. Among both groups the increase in wages has been greater than the rise in the cost of living, so that during the past five years real wages have risen. The increase in real wages has taken place in spite of the fact that the level of wholesale prices during this period has not risen. Even during the short periods of falling prices wages have been further increased. The whole wages movement since the currency stabilization therefore has had no direct relation to the rise and fall of prices.

The present level of wages in the principal branches of trade and industry is indicated by the following table giving the weekly tariff wages paid in September, 1929. (The Reichsmark is valued at $0·238, one hundred pfennigs equal one Reichsmark.)

Industry	Skilled	Unskilled
	In Reichsmarks	Per week
Mining	59·56	42·12
Metal	50·50	37·82
Chemical	51·79	42·91
Building	67·32	55·47
Wood	57·75	49·76
Paper	41·71	37·44
Book printing	56·12	48·85
Textile—Male	37·82	31·73
Female	27·70	22·37
Brewing	61·85	.....
Confectionery	48·76	.....
Railway	51·58	41·85

EMPLOYEES' PENSIONS ON CANADIAN NATIONAL RAILWAYS

Rules and Regulations of Scheme Effective August 1, 1929

THE Pensions Department of the Canadian National Railways published early this month the Rules and Regulations for pension allowances to retired officers and employees of the Canadian National Railways, pursuant to the Canadian National Railways Pension Act enacted by the Dominion Parliament at its session of 1929 (LABOUR GAZETTE, June, 1929, page 602). The new regulations are made effective as from August 1, 1929.

Hitherto the pensions provided by the Grand Trunk Act were payable only on the former Grand Trunk system, the employees on that system receiving pensions, while those on the Canadian Northern, Grand Trunk Pacific and the other Canadian National lines received none. The amending act authorizes the application of the existing pension arrangements to all employees on the Canadian National Railways without discrimination (The Grand Trunk Pension Plan was outlined in the LABOUR GAZETTE, January, 1924, page 33, and the Intercolonial plan was outlined in the issue of January, 1925, page 27).

The text of the new Rules and Regulations is as follows:—

CANADIAN NATIONAL RAILWAYS PENSION DEPARTMENT

GENERAL NOTICE

The Directors of the Canadian National Railway Company, pursuant to the provisions of the "Canadian National Railways Pension Act," have made the following Rules and Regulations for pension allowances to officers and employees after they have left the service, which Rules and Regulations supersede and take the place of the present Grand Trunk Pension Rules and Regulations and any and all other pensions or existing pension rules and regulations, except those pertaining to the Grand Trunk Railway of Canada Superannuation and Provident Fund Association.

RULES AND REGULATIONS

Wherever hereinafter used, unless the context otherwise requires:—

"Company" means the Canadian National Railway Company (Successor, by amalgamation to the Grand Trunk Railway Company of Canada), and includes any company or corporation to the officers and employees of which, pursuant to the provisions of the "Canadian National Railways Pension Act," these rules and regulations are made applicable.

"Directors" means the Board of Directors of the Canadian National Railway Company.

"Employee" means and includes any officer or employee of the Company, giving or required to give his whole time and attention to the business of the Company, or, jointly to the business of the Company and of some other Company, Companies, business, or employment as may be approved of by the Directors, and includes both male and female employees.

"Railway" means and includes any railway undertaking, lines, steamships, telegraphs, properties, and works which the Company has authority to construct, maintain or operate (except Canadian Government Railways).

"Service" or "In the Service" means continuous employment as an employee, and, for the purpose of ascertaining length of service, includes the period of service, if any, upon or in connection with the Company or Railway (a Schedule of which companies and railways is hereto annexed) and also includes such employment whether commenced prior or subsequent to the date when these Rules and Regulations shall come into effect, and whether such employment or service was or is rendered, prior or subsequent to the amalgamation, acquisition or control of such companies or railways by the Company—all of which service shall be considered as continuous from the date from which the employee has been continuously so employed.

"Continuous employment" in this definition of "service" means service continuously without break of any kind except such breaks in service as are specifically provided for in Clause 16 of these Rules and Regulations.

Persons who leave or resign from the service thereby relinquish pension privileges ,and if they re-enter the service they shall be considered as new employees, and service for pension purposes will count only from date of re-entering the service.

Prior employment with the Department of Railways shall be counted as service.

1. The Canadian National Railways Pension Fund shall, subject as hereinafter mentioned, be administered by a Pension Committee (hereinafter referred to as the "Pension Committee").

2. The Pension Committee shall consist of nine members, seven of whom shall be officers of the Company, namely:—

The Chief Officer in charge of Pensions, who shall be the Chairman.
The Chief Officer in charge of Legal Affairs.
The Chief Officer in charge of Maintenance and Operation.
The Chief Officer in charge of Traffic.
The Chief Officer in charge of Finance.
The Chief Officer in charge of Purchases and Stores, and
The Chief Medical Officer,
(or such other officer as each of the said officers may from time to time appoint to represent and act for him on the said Committee) and two members to be elected from time to time from the ranks of officers of the recognized labour organizations on the Canadian National Railways by vote of such officers, who shall be general chairmen, legislative representatives, or

holders of higher official positions approved of by the Directors; notice of the election of such members shall be given promptly to the Secretary of the Pension Committee.

3. The Head Office of the Pension Committee shall be at Montreal, and the Pension Committee shall from time to time appoint a Secretary. There shall be attached to the Pension Committee in a legal advisory capacity a legal officer of the Company selected for the purpose by the Vice-President in charge of Legal Affairs of the Company.

4. All actions and decisions of the Pension Committee shall from time to time be reported to the Directors for confirmation, and when confirmed shall (subject to such modifications, if any, as may be made by the Directors) take effect as and from the date of the decision of the Pension Committee.

5. Subject as aforesaid and as hereinafter expressed, the Pension Committee shall have power:—

To make and enforce rules and regulations for the efficient operation of the Pension System:

To determine the eligibility of employees to receive Pension allowances:

To fix the amount of such allowances:

To prescribe the conditions under which allowances may be granted: and

The Pension Committee may, for the government of their own proceedings, make rules not inconsistent with these Rules and Regulations.

6. The benefits of the Pension system shall apply to all employees in the service on the date of the coming into effect of these Rules and Regulations or entering the service thereafter, provided that with respect to any employee entering the service on or after the said date any service rendered by him before he was of the age of sixteen (16) years shall not be counted for pension.

7. The Pension shall be an annual allowance calculated at the rate of one per cent (1%) for each year of service on the highest average rate of the employee's wages or pay during any ten consecutive years of his service, the calculation to be made on the gross amount from time to time credited to the employee on the payrolls of the Company without deduction of any kind.

(Example:—An employee in continuous service from the age of 25 years to 65 with highest average rate of wages between 40 and 50 of $1,000.00 per annum would receive forty hundredths of $1,000.00, or $400.00 per annum.)

8. Subject to confirmation as provided in Rule 4, such pension may be granted by the Pension Committee to employees on their retirement from the Company's service in the following cases:—

(*a*) To an employee retiring at the age of 65 years or over, with 15 or more years of service to his credit.

(*b*) To an employee of the age of 60 and under 65 years with 20 or more years of service to his credit retired by reason of permanent physical or mental disability upon the certificate of the Company's Chief Medical Officer that for such reason the employee is unfitted to follow his usual or any other suitable employment in the Company's service.

(*c*) To an employee who, after ten or more years of service to his credit, becomes incapable of continuing his service by reason of injuries received whilst actually at work in the employment of the Company, but only for so long as his incapacity shall continue.

(*d*) To an employee of the age of 50 years and upwards with 15 or more years of service to his credit who is discharged from the Company's service otherwise than for misconduct.

9. In ascertaining the number of years of service of an employee to determine the amount of his pension any number of months in the last year of his service less than six months shall be eliminated and up to and over six months shall be counted as one year.

10. Subject to approval of the Directors the Pension Committee may grant a pension to an employee on account of the special circumstances of his particular case where on retirement he may not be eligible under the provisions of Rule 8.

11. It is the intention that all employees shall be retired from the Company's service on reaching the age of 65 years. The Pension Committee may, however, upon the recommendation of the Head of the Department in which the employee is employed, approve of the continuance in the service of the Company of any employee after he has reached the age of 65 years for such period as the Pension Committee may determine.

12. The Pension allowance of a joint employee shall be based upon the proportionate amount of his wages borne by the Company.

13. No pension shall be at a lower rate than $25.00 per month, except in the case of joint employees.

14. The Pensions granted shall be payable by cheque in monthly installments.

15. The date of the commencement of the pension of any employee will be on the first day of the Calendar month following the month in which he was retired from the service, or such other date as the Pension Committee may determine.

16. The following need not necessarily be considered by the Pension Committee as a break of continuous employment or continuity of service:

(1) Absence on leave.
(2) Temporary lay off on account of reduction of forces.
(3) Suspension or discharge if followed by re-instatement or re-employment within one year with the approval of the head of the Department.

In reaching a conclusion as to whether there has been a break in continuity of service the fact of the employee entering other employment during such absence, whether on leave or from suspension, discharge, or lay off, may be considered by the Pension Committee.

(4) Applications for pension by employees who enlisted in the Army or Navy or Air Force and served upon the side of the Allies during the Great War of 1914-1918, may, in the discretion of the Committee, be dealt with as follows:

The period of such military or naval or air force service shall not be considered as a break in the continuity of service with the Company, and such period may be included in the ten years (referred to in Rule 7) used to ascertain the highest average rate of wages or pay, and in ascertaining the rate of wages or pay for the

period of such absence on military or naval or air force service, such rate shall be based upon the amount of wages or pay which the employee might or would have received had he not been so absent, such amount to be determined in the discretion of the Committee and such period of military or naval or air force service may be included in the total period of service on which his pension is based.

And applications for pension by employees absent on leave and, during such absence, being employed as General Chairmen, Legislative Representatives (or in any other higher official positions approved by the Directors) of organizations of labour operating on the lines of the Railway and recognized by the Directors may, in the discretion of the Committee, be dealt with as follows:—

With respect to employees absent on leave and during such absence being employed as aforesaid, such period of absence shall not be considered as a break in the continuity of, but shall be counted as service with the Company, and in arriving at the highest average rate for the ten year period of wages or pay for pension, the same shall be determined by using the average of the highest ten year periods of wages or pay received from the Company by the first five employees on the seniority list kept by the Company (on which list the name of the employee to be pensioned appears) immediately above such employee, and if there be not five such employees on such seniority list above such employee, then to make up such average of five employees' wages or pay by taking the wages or pay received by employees on such seniority list, in seniority order, immediately below the employee to be pensioned.

17. No pension or allowance shall be assignable in whole or in part, and in the event and during the continuance of any seizure, attachment, or garnishment thereof, any such pension or allowance shall cease to be payable.

18. The Pension Committee may in its discretion withhold permanently or temporarily the payment of any pension or allowance in any case where it considers there has been any misconduct on the part of the pensioner or any action on his part inimical to the interests of the Company.

(2) In the case of pensioners, who, in the opinion of the Pension Committee, are irresponsible or of unsound mind, or wherever the Pension Committee deems advisable, payments of pensions may be made to such person or persons, as, in the opinion of the Pension Committee, are best qualified in all the circumstances to administer such payments, whether or not the person to whom the payment is made is the legal guardian of the pensioner, or otherwise.

(3) The proportion of unpaid pensions or allowances of deceased pensioners will be paid up to and including date of death as the Pension Committee shall decide.

19. The Secretary shall keep himself informed of the whereabouts of all pensioners and shall require satisfactory evidence from each of them at least once a year that he still comes within these Rules and Regulations.

20. The acceptance of a pension or allowance shall not debar pensioners from engaging in other business, but such pensioners shall not so engage in other business or re-enter the service of the Company except with the written consent of the Pension Committee; otherwise their pensions or allowances will be subject to discontinuance by the Pension Committee.

21. Any person whose employment may be authorized shall not be eligible for pension if such person's age at the time of entry into the service exceeds fifty years.

22. It is expressly provided that neither the establishing out of its revenues of a system of pensions by the Company, nor any other action now or hereafter taken by the Company or by the Pension Committee, shall be construed as giving to any employee any right whatsoever to be retained in the service or any legal right or claim to receive any pension whatsoever, and the Company expressly reserves its right and privilege to discharge at any time any employee when the interests of the Company in its judgment may so require and without any liability for any claim or for any pension or other allowance than salary or wages due or unpaid.

23. The foregoing Rules and Regulations shall not apply to any employees or persons who are members of or eligible for or in receipt of pension or superannuation under any other plan, now or hereafter in effect, where such plan is contributed to wholly or partly by the Company or the Government of Canada (except Government War Pensions).

24. These Rules and Regulations shall take effect on August 1, 1929, and may be altered and changed from time to time by the Directors upon the recommendation of the Pension Committee as the Directors may determine.

SCHEDULE OF COMPANIES AND RAILWAYS FOR COMPUTATION OF "SERVICE" (AS DEFINED) AS AN EMPLOYEE (AS DEFINED) UNDER THE RULES AND REGULATIONS OF THE CANADIAN NATIONAL RAILWAYS PENSION FUND

Canadian National Railway Company.—Including former Grand Trunk Railway Company of Canada and other Companies amalgamated therewith, also the following owned, leased or controlled railways and companies:

Detroit, Grand Haven and Milwaukee Railroad Company.
The Grand Trunk Junction Railway Company.
Grand Trunk Western Railway Company.
The Detroit and Huron Railway Company.
The Pontiac, Oxford and Northern Railroad Company.
The Michigan Air Line Railway.
The Ottawa Terminals Railway Company.
St. Clair Tunnel Company.
Toledo, Saginaw and Muskegon Railway Company.
The United States and Canada Railroad Company.
Vermont and Province Line Railroad Company.
The Pembroke Southern Railway Company.
The Central Counties Railway Company.
The Chicago, Detroit and Canada Grand Trunk Junction Railroad Company.
Cincinnati, Saginaw and Mackinaw Railroad Company.
The Thousand Islands Railway Company.
International Bridge Company.
Grand Trunk-Milwaukee Car Ferry Company.
The Terminal Warehousing Company, Limited.
The Montreal Warehousing Company.
Canada Atlantic Transit Company.
Canada Atlantic Transit Company of United States.

Chicago, New York and Boston Refrigerator Company.
Montreal and Southern Counties Railway Company.
The Oshawa Railway Company.
Grand Trunk Railway Insurance and Provident Society.
Canadian National Railways (France) Limited.
Montreal and Province Line Railway Company (leased).
Stanstead, Shefford and Chambly Railroad Company (leased).
Manitoba Northern Railway Company.
Prince Charles, Limited.
The Grand Trunk Pacific Railway Company and the following owned or controlled railways and companies:—
The Grand Trunk Pacific Branch Lines Company.
The Grand Trunk Pacific Saskatchewan Railway Company.
The Grand Trunk Pacific Development Company, Limited.
Canadian National Steamship Company, Limited, formerly Grand Trunk Pacific Coast Steamship Company, Limited.

Canadian Northern Railway System.—Including amalgamated railways and companies and the following owned, leased or controlled railways and companies:
The Canadian Northern Railway Company.
The Bay of Quinte Railway Company.
The Bessemer and Barry's Bay Railway Company.
The Canadian Northern Alberta Railway Company.
Canadian Northern Manitoba Railway Company.
The Canadian Northern Ontario Railway Company.
Canadian Northern Pacific Railway Company.
The Canadian Northern Saskatchewan Railway Company.
Canadian Northern Western Railway Company.
The Halifax and South Western Railway Company.
The James Bay and Eastern Railway Company.
The Marmora Railway and Mining Company.
Duluth, Winnipeg and Pacific Railway Company.
Duluth, Rainy Lake and Winnipeg Railway Company.
The Canadian Northern Quebec Railway Company.
The Central Ontario Railway.
The Irondale, Bancroft and Ottawa Railway Company.
The Quebec and Lake St. John Railway Company.
Brockville, Westport and North Western Railway Company.
Canadian National Electric Railways.
(Toronto Suburban Railway and Toronto Eastern Railway).
Canadian National Realties, Limited.
Canadian National Transfer Company.
The Canadian Northern Steamships, Limited.
Mount Royal Tunnel and Terminal Company, Limited.
The Niagara, St. Catherines and Toronto Navigation Company (Limited).
The Niagara, St. Catherines and Toronto Railway Company.
The Qu'Appelle, Long Lake and Saskatchewan Railroad and Steamboat Co.
The St. Charles and Huron River Railway Company.
Toronto Dwellings, Limited.
The Manitoba Railway Company.
Okanagan Lake Boat Company, Limited.
The Canadian Northern Coal and Ore Dock Company, Limited.

Canadian Government Railway System.—Including the following railways and companies:
Intercolonial Railway.
Prince Edward Island Railway.
National Transcontinental Railway.
National Transcontinental Railway Branch Lines.
Dartmouth to Deans Branch.
New Brunswick and Prince Edward Island Railway.
The Moncton and Buctouche Railway.
The Salisbury and Albert Railway.
The Elgin and Havelock Railway.
The St. Martins Railway.
The International Railway of New Brunswick.
Quebec and Saguenay Railway.
The Caraquet and Gulf Shore Railway.
The Lotbiniere and Megantic Railway.
Cape Breton Railway.
The York and Carleton Railway.
Halifax Ocean Terminals.
Vale Railway (leased).
Saint John and Quebec Railway (leased).
Prince Edward Island Car Ferry.
Car Ferry—Strait of Canso.

Canadian National Telegraphs.—Including Canadian Northern Telegraph Company. The Great North Western Telegraph Company of Canada and the Grand Trunk Pacific Telegraph Company, also employees of the Western Union Telegraph Company taken over with British Columbia Lines under agreement dated August 28, 1924, and those taken over with Maritime Lines under agreement dated January 4, 1929.

Canadian National Express.—Including the Canadian Express Company, Canadian National Express Company and Intercolonial Express Company.

Canadian Government Merchant Marine, Limited.

Canadian National (West Indies) Steamships Limited.

Canadian National Railway Company.—Including former Grand Trunk Railway Company of Canada and other Companies amalgamated therewith, also the following owned, leased or controlled railways and companies:
The Grand Trunk Junction Railway Company.
Grand Trunk Western Railroad Company.
Detroit, Grand Haven and Milwaukee Railroad Company.
Grand Trunk Western Railway Company.
The Detroit and Huron Railway Company.
The Pontiac, Oxford and Northern Railroad Company.
The Michigan Air Line Railway.
Toledo, Saginaw and Muskegon Railway Company.
The Chicago, Detroit and Canada Grand Trunk Junction Railroad Company.
Grand Rapids Terminal Railroad Company.
The Chicago and Kalamazoo Terminal Railroad Company.
Bay City Terminal Railway Company.
The Ottawa Terminals Railway Company.

St. Clair Tunnel Company.
The United States and Canada Rail Road Company.
Vermont and Province Line Railroad Company.
The Pembroke Southern Railway Company.
The Central Counties Railway Company.
Cincinnati, Saginaw & Mackinaw Railroad Company.
The Thousand Islands Railway Company.
International Bridge Company.
Grand Trunk-Milwaukee Car Ferry Company.
The Terminal Warehousing Company, Limited.
The Montreal Warehousing Company.
Canada Atlantic Transit Company.
Canada Atlantic Transit Company of United States.
Chicago, New York and Boston Refrigerator Company.
Montreal and Southern Counties Railway Company.
The Oshawa Railway Company.
Grand Trunk Railway Insurance and Provident Society.
Société Anonyme Canadian National Railways (France).
Montreal and Province Line Railway Company (leased).
Stanstead, Shefford and Chambly Railroad Company (leased).
Manitoba Northern Railway Company.
Prince Charles, Limited.
Saint John and Quebec Railway.
Quebec Oriental Railway.
The Atlantic, Quebec and Western Railway.
The Quebec, Montreal and Southern Railway.
The Inverness Railway.
The Kent Northern Railway.
The Montreal Stock-Yards Company.
Montreal Fruit and Produce Terminal Company Limited.
The Grand Trunk Pacific Railway Company and the following owned or controlled railways and companies:
The Grand Trunk Pacific Branch Lines Company.
The Grand Trunk Pacific Saskatchewan Railway Company.
The Grand Trunk Pacific Development Company, Limited.
Canadian National Steamship Company, Limited, formerly Grand Trunk Pacific Coast Steamship Company, Limited.

Canadian Northern Railway System.—Including amalgamated railways and companies and the following owned, leased or controlled railways and companies:
The Canadian Northern Railway Company.
The Bay of Quinte Railways Company.
The Bessemer and Barry's Bay Railway Company.
The Canadian Northern Alberta Railway Company.
Canadian Northern Manitoba Railway Company.
The Canadian Northern Ontario Railway Company.

Canadian National Express.—Including the Canadian Express Company, Canadian National Express Company and Intercolonial Express Company.

Canadian Government Merchant Marine, Limited.

Canadian National (West Indies) Steamships, Limited.

BRITISH CONTRIBUTORY PENSIONS TO BE CONTINUED TO IMMIGRANTS TO CANADA

The following letter from the Controller of the British Ministry of Health was received by the Mayor of Hamilton, Ontario, in December, being in reply to a letter addressed to the Right Hon. J. H. Thomas, Lord Privy Seal, asking particulars concerning the proposed extension of British Old Age Pensions to pensioners residing in the Dominions:—

"Under the existing law a pension under the Widows', Orphans and Old Age Contributory Pensions Act is not payable to any person while absent from Great Britain. In the bill now before Parliament, however, it is proposed that as from January 2, this provision shall be modified so as to permit of the payment of any pension to which he may be entitled to a person resident in any part of His Majesty's Dominions overseas. It will be appreciated, however, that the scheme is a contributory one. In general, therefore, title to pension can only exist where the applicant, or in the case of a married woman or widow, the applicant's husband, has been insured under the scheme while resident in Great Britain.

"The method of payment of pensions to persons in the Dominion, in the event of the measure in question becoming law, has yet to be determined, and may, under the proposals in the bill, be a matter for arrangement between His Majesty's Government and the Government of the Dominion concerned.

"As soon as possible after the passing of the new measure it is proposed to make known to persons in the Dominion who may be affected by the new provisions, what steps should be taken to lodge claims. For the present it is suggested that any persons who make inquiries from you on the subject should be advised to communicate with this Department."

The Japanese Trade Union Bill

The Trade Union Bill drafted by the Japanese Bureau of Social Affairs in 1925, has been redrafted and will be introduced at the next session of the Imperial Diet. In view of the fact that the attitude of the employers' organizations towards the legal recognition of trade unions has become less hostile, and that public opinion favours the enactment of the Bill in order to secure a more orderly labour movement, it is expected that the Bill will be passed.

The Bill recognizes individual unions and federations of unions irrespective of trade. Any person not a worker may join a trade union, if such person: (1) has been a worker, (2) has been appointed an official of a union or (3) has been admitted by a resolution of a general meeting. Soldiers, sailors and civilians attached to the army or navy are not allowed to join a trade union. The only requirement for the legal recognition of a trade union is notification of the authorities accompanied by a copy of the rules, including the name, objects, address of headquarters, etc. Trade unions are free to be incorporated or not as they please. The primary purposes of a trade union must be to maintain or improve conditions of labour. It may also carry on the activities of a mutual aid society, a co-operative society, etc. The discharge of a worker by an employer on account of membership in a trade union is made unlawful. A contract of service which requires that the worker shall either withdraw from or refrain from joining a trade union is declared invalid. Trade unions are not liable for losses brought upon an employer by a labour dispute. The authorities are empowered to declare illegal any conduct on the part of a union which is contrary to law or to the rules of the union. They may also require unions to submit reports of their transactions, property, membership, etc. Means are provided for trade unions to resort to litigation if their rights are unlawfully violated.

The present Bill does not include any provisions relating to collective agreements. The Government intends to enact separate legislation on this subject.

During December a total of 5,530 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 45 of which were fatal cases; in Schedule 2 industries 454 were reported including 3 fatal cases, and 304 Crown, 3 of which were fatal, were reported during the month, making in all 6,288, of which 51 were fatal. The total number of accidents reported to the Board during 1929, was Schedule 1, 76,029; Schedule 2, 6,008; Crown, 5,066.

A lower retirement age for Federal employees, with optional retirement at the age of 60 after long service, is recommended in the annual report of the United States Civil Service Commission, published in December.

PUBLIC HEALTH IN THE PROVINCE OF QUEBEC

Annual Report of the Provincial Bureau of Health

THE sixth annual report of the Quebec Provincial Bureau of Health was published in December, the second report of the Division of Demography being included in the same volume. The first of these reports covers the 12 months' period ending June 30, 1928, and the second covers the year 1927.

Progress in Applied Hygiene

The director of the Bureau states that the Province has advanced considerably during the past few years in conditions affecting public health. "The new organizations," he says, "which the Provincial Bureau of Health has instituted and created the past five or six years have already begun to bear fruit. The results being obtained in other countries and the increasingly manifest tendency of health administrations in other Canadian provinces to imitate and follow us in certain directions, surely indicates that we are not on the wrong road."

As an example of the improved conditions now prevailing the report refers to the decline by nearly 1,000 in the number of deaths during 1927 of children under one year of age, and of 132 in the deaths in the province from tuberculosis, "Our infant mortality rate," it is stated, "dropped from 142.0 deaths per thousand births to 129·3, a gain of nearly thirteen points, and the death rate from tuberculosis from 127·9 per 100,000 population to 120·8, or a gain of seven points. We are progressing fairly rapidly as regards infant mortality, slowly as regards tuberculosis. And there is an explanation for this. The result of educational work, which is of paramount importance in protecting infant life, becomes manifest at once, whereas the campaign against tuberculosis, requiring so much time and involving so many elements, with some of which we are imperfectly provided, must be pressed for several years before we shall see the dawn of a better day. The figures cited above are still formidable, and heavily surcharge our general mortality which, without these two causes of loss, would be the lowest in all Canada. But we are confident that the gains already made will be followed by others still more striking as a result of the campaign of general education carried on throughout the Province and the individual instructional campaign of which each District Anti-tuberculosis Dispensary and each baby clinic in our large and small towns, are the centres. This gain of thirteen points in the infant death-rate in 1927 is the largest noted by any of the provinces of the country and is without doubt due to the diffusion of knowledge of maternal and infant hygiene effected by our County Health Units and Town Milk Stations.

"When our rural counties will all be provided with Health Units and our urban centres with baby clinics, our statistics on infant mortality will bear comparison with those of the most favoured states."

County Health Units

The County Health Units, mentioned in the preceding paragraph, were provided for under legislation enacted by the provincial legislature in 1928. A similar provision has been made in Manitoba (LABOUR GAZETTE, August, 1929, page 847). At the present time eight health units, comprising ten counties, exist in the Province of Quebec. These are, in order of formation, the Counties of Beauce, Saint-Jean, Iberville, Lac Saint-Jean, St. Hyacinthe, Rouville, Temiscouata, Joliette, Nicolet and Terrebonne. Two other units, one including the County of Chicoutimi and the other the two Counties of L'Assomption and Montcalm are about to be organized, and the Counties of Megantic, and of Temiscamingue at their last municipal council meetings, requested the same advantage and voted the tax necessary for their share of contribution. So, within a few months. there will be about fifteen rural counties provided with the system now considered the best for the protection of the public health.

The report mentions that one county is now contributing over $5,000 for public health, three others $3,500, and others again $2,500 for the establishment of public health organizations under the provisions of the Health Unit Act of 1928, to which reference has already been made. It is claimed that such rapid progress in this type of health system is unique on the American continent. The Rockefeller Foundation gave invaluable assistance in organizing these health units, contributing upwards of $34,000, for the work in the province during 1929, not including sums expended in the training of local staffs. "The results of the new organization are already apparent," the report states. "The staff of each unit devoting its whole time to its functions, it follows naturally that public health education may be practised in a most intensive manner. Repeated visits to all the municipalities in the county, frequent interviews with the civil and religious authorities, special

attention to the slightest outbreak of infectious disease, free distribution of sera and vaccines, medical inspection of school children and inculcation in the young mind of notions of hygiene, visits in the home by the nurses, travelling tuberculosis and baby clinics, reaching every parish in the county during the course of the year, repeated and efficient inspections of all public buildings, bakeries, butcher shops, groceries, restaurants, etc., all serve to demonstrate to the people that hygiene is a serious matter. The result may be judged from the fact that, in those counties first organized, the Health Unit now constitutes an integral part of the lives of the people and has become a necessary essential which will no longer be foregone.

"When, for instance, one sees the general mortality of the County of Beauce fall from 14·6 per 1,000 in 1926 to 11·8 in 1928, that of Lac Saint-Jean from 14·8 in 1926 to 12·1 in 1928, and that of Saint-Jean-Iberville from 12·4 in 1926 to 11·8 in 1928; and when, for the same years, the death-rate from infectious diseases has fallen from 211·9 per 100,000 population to 59·1 in Beauce, from 174·4 to 53·5 in Lac Saint-Jean and from 74·0 to 60·4 in Saint-Jean-Iberville, not to mention the very remarkable reduction in infant mortality as well, it may fairly be said that the system has proved its worth and that the important thing is, now, to maintain, perfect, and extend it."

Report on Vital Statistics for 1927

The report of the Division of Vital Statistics for 1927 is the second of the kind since 1924, when the Province was constituted a registration area. Prior to 1926 the statistical material collected for the province is stated to have been incomplete and inexact. The total population in 1927 is given as 2,604,000 (1,301,592 males and 1,302,408 females), or about 28 per cent of the population of the Dominion. Of the total population, 1,307,778 were less, and 1,296,222 were more than 21 years of age. The rural population formed 52·9 per cent and the urban population 47·1 per cent of the total. The report gives full particulars of births, marriages and deaths during the year.

Industrial Development in the United States and Canada

The Metropolitan Life Insurance Company has published the results of a survey carried out by one of its committees with the co-operation of the National Electric Light Associations on the subject of industrial development in the United States and Canada during 1926 and 1927. Two thousand and eighty-four communities, 1,934 in the United States and 150 in Canada, contributed their experience with three distinct types of community growth; first, growth through the acquisition of industries which have moved to that point from another city; second, growth through the establishment of branch plants; and third, growth through the setting up of new local industries. Reasons for industrial movement were obtained directly, for the most part, from the manufacturer locating the plant. Every state of the United States and all provinces of Canada are represented. The total population of all United States cities reported on in the survey is 51,930,811 which is approximately 75 per cent of the total urban population of this country. In Canada, the total population of all cities reported on is 2,912,211 or approximately two-thirds of the total urban population of that country.

One hundred and fifty Canadian cities reported a gross gain of 290 plants, employing 15,357 people, during the years 1926 and 1927. These plants included newly organized companies, branch plants, and relocations.

The average size of plant gained in Canada was 53 employees which compares with an average of 36 employees for the United States. Plants gained by cities in the Province of Quebec averaged 87 people, in Ontario 61, in Saskatchewan 35, in Alberta 27, in British Columbia 24 and in Manitoba 23. Of the 197 new local plants, 14 employed 100 or more persons. Four of these were pulp or paper mills, and the others were distributed among the following industries; dairy, bread and bakery products, medicines and food products, cotton goods, knit goods, motion picture films, and petroleum refining.

Twenty-eight of the branch plants established in Canadian cities were located there by United States firms, and six by English or Scottish firms. Of this total, 23 were established in Ontario, 10 in Quebec, and 1 in Saskatchewan.

Twenty-one firms relocated to Canadian cities and 18 firms moved away from Canadian cities. Of the latter group, 2 went to the United States, 3 moved from one province to another, and the remainder moved from one point to another within the same province.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Dominion Asked to Subsidize Public Health Units

The Association of Registered Nurses of the Province of Quebec, at a meeting on December 6, decided to send to the Dominion Government a request that a federal grant be made to the various provinces for promoting county health units.

Dr. A. Grant Fleming, of Montreal, gave an address in which he stated that there is an increasing demand for the specialization of medicine. "At the present time," he said, "it cannot be denied that the full benefits of preventive and curative medicine are not reaching all the people." As an evidence of the fact that people of moderate means are not receiving sufficient medical care, he pointed out that in the United States, a committee is working on the cost of this service. In Alberta the government is organizing travelling clinics. In Saskatchewan there are 27 municipal physicians on full or part time, and the people of the Province tax themselves to maintain sanatorium care. British Columbia is on the verge of some legislation on the lines of health insurance. In the larger centres it was comparatively easy to organize health departments, Dr. Fleming continued, the rural areas, however, have not had the benefit of much public health effort. In some provinces there has been division into large districts, each under a health officer, but with large territory to cover and no staff of workers he could accomplish little.

The solution to the problem of bringing the benefits of public health work to rural communities has been found in the province of Quebec, the speaker pointed out, in the establishment of county health units, of which the minimum group is composed of a medical officer, a sanitary inspector, a public health nurse and a secretary, all trained workers on full time service. Dr. Fleming pointed out that Quebec led the way in Canada in establishing county health units. The first unit was formed in 1926, and there are now at least 16 county health units in the Province, the county being taken as the basis of organization because it is the simplest political division for the purpose. The provincial health authorities, he said, were to be commended for the movement, in which assistance was given by the Rockefeller Foundation. "These County Health Units are giving results in the control of diseases and the improvement of health. The problem now is how this system can be extended across the Dominion."

By the British North America Act, Dr. Fleming pointed out, all matters not mentioned specifically as coming within provincial jurisdiction are under Federal control. Public health was not mentioned in the Act, and it would seem, therefore, that it became the responsibility of the Dominion Government. However, the provinces started to take care of public health, which has come to be regarded as a provincial responsibility. The Dominion Government has made a grant to the provinces on a *per capita* basis, to be supplemented by an equal sum from the Provincial Governments, to fight venereal diseases, and, Dr. Fleming thought it would be reasonable for the Dominion to subsidize further public health work, definitely assuming some responsibility for the health of citizens in the country. This would not relieve the provinces of their responsibility, but would stimulate them and assist in the work.

Duties of Employers in Regard to Industrial Safety

Mr. Robert Taschereau, K.C., chairman of the provincial Workmen's Compensation Board, at a meeting of the Province of Quebec Safety League at Montreal on November 29, spoke of the duties of employers in regard to safe practices. "I fail to understand," Mr. Taschereau said, "why an employer should persist in refusing to take the proper measures to safeguard the life of his employees. The contribution to the hospital does not relieve the employer from his obligations towards those who are working for him. His first duty is to safeguard them. I am aware that the employer who looks after his employees will not receive the same amount of advertisement as when he sends a large contribution to the hospital. The satisfaction of having done his duty will be a sufficient reward to the man who has his heart in the right place. What chance do you give your employees if you supply them with dangerous appliances? Do you think you are acting fairly when you ask your employees to risk their lives every day when you have failed to give them the necessary protection?

"Prevention of accidents is in the interest of the employer, because accidents are always expensive. The temporary closing of an industrial establishment or the temporary suspension of work may be brought about by an accident. Is the employer willing to run this chance? If so, and if he is not otherwise protected, I have no hesitation in stating that he is a poor business man. It is

true that, with regard to accidents to employees, the employer is in most cases covered by an insurance company, but who pays the premium? And when the experience is bad, are not the rates raised accordingly? We must also take into account the worry and loss of time which generally are the results of an accident. The employer should educate his employees and make them believe in safety.

Safety Education.—"The means taken by the employer will be inefficient unless the employee realizes that, in this connection, his own personal safety is at stake. What will be the use of supplying an employee with a pair of goggles or other means of safety unless he uses them? How can you prevent a mechanic from foolishly exposing himself to danger? Education is the only proper remedy. This education can be brought home by way of written instructions, posters, etc., and more particularly by way of oral instructions, given by a competent foreman or the party in charge of the work. The young employee or apprentice should, at the outset, be strongly impressed with the idea that Safety First is always the best policy. The employer should by all means encourage such a policy by taking a personal interest in those who are seriously endeavouring to have it prevail. Disregard of the elementary rules of prudence, wilful disobedience of instructions concerning safety, should not be tolerated in the establishment, and in flagrant cases, the authority of the employer should be asserted in no uncertain way.

Powers of the Board.—"It seems to me that our statistics show that there is a great room for improvement. No one will deny that with a little foresight, accidents resulting in the loss of one or more fingers could be substantially reduced. The situation could also be improved if proper safeguards were applied to machinery. Will the expense of a few dollars be a sufficient reason to allow the situation to remain as it is? In this connection, I prefer leaving the question open, but I may be allowed to remind those who are interested and who neglect to fulfil their duty that the Workmen's Compensation Commission is empowered under the Statute to investigate, and in proper cases, to apply the remedy. It would be a big mistake to believe that in this respect, the Commission will not fulfil its duty."

Health in Industry in Ontario

In an article on this subject contributed to the *Pulp and Paper Magazine,* December 26, Dr. John W. S. McCullough, Chief Health Inspector for Ontario, dwells on the value of health from the workers' standpoint. "Health", he declares, "is the most important asset of the workingman; just as sickness is the greatest cause of poverty, so sickness may be the ruin of the worker and his family." The writer gives a retrospect of the past activities of the Province of Ontario in assuring healthful conditions of labour as follows:—

"One of the earliest steps taken in the protection of the health of men in the industries of Ontario, was the provision by the Provincial Board of Health about 25 years ago, under Order in Council, of medical services at low cost. This provision remains the least expensive medical service to be found anywhere and its merit is acknowledged by the fact that the regulations governing the service have been adopted by other provinces of Canada.

"This service applies to all industries operating in the unorganized territory of Ontario. It costs the individual one dollar per month. Under it the worker is entitled to medical and surgical attention, medicine, nursing and hospital care during the period of his disability, these for any illness whose origin can be traced to the period of his employment. The monthly fee is collected by the Company and paid directly to the doctor without deduction. The quality of the service is assured by the fact that the contract of the employer with the doctor, must be approved by the Department of Health which reserves the right to annul such contract if the doctor is not deemed suitable, if the distance from his office to the camp is deemed too great for adequate service or for any other sufficient reason.

"Besides providing for the care of men in illness, the regulations include a much higher duty, viz., that of disease prevention; the protection against communicable disease, the provision of safe water supplies, clean camps, well-ventilated quarters, first-class food, separate kitchens, baths in many cases, in short, homes of a character quite equal to, if not better in many cases, than those occupied by city workers. Moreover, the inauguration in 1912 of a system of District Officers of Health, supplemented by a corps of trained Sanitary Inspectors serves to maintain the medical and sanitary services at a high level. The general appearance of the best camps is a revelation to medical and health visitors from other countries and provinces, who have occasion to inspect conditions on the spot. . . .

"A medical and sanitary service of the kind in operation in the industries of the newer portions of the province is of high benefit to both the industrial worker and his employer. On the one hand, such a service ensures satisfactory treatment at low cost to the worker, repairs his disability and returns him

to work within a reasonable period; the sanitary service protects him against affections having their origin in insanitary surroundings. On the other hand, the employer is benefited by the lessening of turnover or wastage of labour due to an excess of sickness or delayed recovery from sickness or injury."

Sickness Among Industrial Employees

The United States Public Health Service recently reprinted from the Public Health Reports a bulletin on this subject, showing the frequency of disability from important causes and lasting longer than one week among 165,000 persons in industry in 1927, and giving a summary of the sickness experience of this group from 1920 to 1927. From 1921 to 1927 the average annual frequency of such cases among male employees was 101 cases per 1,000 persons. It is pointed out that this is an understatement of the frequency of cases of sickness and non-industrial accidents, as sick benefit associations refuse payment for disability on account of several types of sickness, or for chronic diseases contracted prior to the date on which the sick person joined the association. The real magnitude of the sickness incidence rate is therefore unknown, but the figures in the present report are nevertheless of considerable value. None of the cases of sickness reported include industrial accidents.

A chart in the bulletin shows the relative importance of different groups of diseases from the standpoint of the frequency of their occurrence. Claims for sickness benefits on account of respiratory diseases constituted 41·8 per cent of the total claims; for digestive diseases, 13·7 per cent; and for external causes (non-industrial injuries), 10 per cent. These three groups added together, therefore, accounted for 65½ per cent of the cases for which sick benefits were paid by associations reporting to the Public Health Service.

Of the respiratory cases reported since 1921 nearly 50 per cent were influenza or grippe.

The digestive diseases were the second most important group from the standpoint of the frequency of their occurrence. Within this group, in the order named, the most important numerically were: (1) diseases of the stomach (not including cancer), (2) appendicitis, (3) diarrhoea and enteritis, and (4) hernia.

External causes made up the third largest group, and the fourth was the circulatory-urinary group, followed by rheumatism (acute and chronic). Other groups of importance numerically were diseases of the organs of locomotion, and the epidemic and endemic diseases. The illnesses not included in the groups mentioned above comprised only 7·9 per cent of the total cases.

Prevalence of Sickness and Physical Defects

The Service Letter on Industrial Relations, published semi-monthly by the National Industrial Conference Board (U.S.A.), had a note in the issue for November 25 giving some conclusions that were reached by the Committee on the Cost of Medical Care after a study of existing material on this subject. The field of observation regarding time lost for illness covered some 570,000 persons studies of the Metropolitan Life Insurance Company; the employees of the Boston Edison Electric Company, whose number is not stated; 1,282 office workers in an unnamed manufacturing concern; and 16,285 employees of the B. F. Goodrich Company. If the sickness observed in these cases were equally distributed among all the persons observed, it would mean for each a loss of time of about eight days, or between 2 per cent and 3 per cent of the working days of the year.

Figures with respect to physical defects drawn from the experience of the Life Extension Institute and the Metropolitan Life Insurance Company do not state the proportion of the whole number showing one or more of the defects enumerated, but rather the proportion of the total number affected by each defect enumerated. Since certain defects are found in a majority of the total number, it seems unlikely that there is more than an inconsiderable portion of the community in which a physician would be unable to find some physical defect.

It is pointed out that the significance of such findings is much greater in relation to the present and to the future than it is in relation to the past. "What the conditions of illness and of physical perfection or imperfection may have been fifty years ago, we simply do not know. There is no ground for the conclusion, so often drawn, of physical deterioration. For all we know, the physical condition of the people of the United States may have been and probably was far worse than it is to-day. If, as has been demonstrated, mortality has declined, there is every reason to suppose that the physical disorders which precede death have diminished in their evil effects. Such figures, however, impose a duty in the present, namely, the more widespread and efficient utilization of preventive and curative measures. For the future such figures have a significance as a basing point from which future changes can be judged."

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Toronto Vocational Schools

The total enrolment in the Toronto vocational schools is 24,819, according to figures presented to the advisory vocational committee. Of this number 9,573 are taking commercial work, 14,385 are in the technical school classes, 225 at the Edith L. Groves School for Girls, 145 at the Bolton Avenue School for Girls, and 491 at the Junior Vocational School for Boys.

The enrolment by schools is as follows:—Day classes, Central Technical School, 2,537; Danforth branch, 1,257; Western branch, 889; Central Commerce, 1,998; Eastern Commerce, 1,502; Western Commerce, 1,030. Evening classes—Central Technical, 5,928; Oakwood Branch Technical, 173; Northern Branch Technical, 69; Danforth Branch Technical, 2,378; Western Branch Technical, 1,154; Central Commerce, 2,417; Northern Branch Commerce, 41; Eastern Commerce, 1,574; Western Commerce, 1,011.

Proposed Apprenticeship Legislation in British Columbia

The question of training boys in skilled trades in order to relieve the congestion of the labour market caused by an overabundance of unskilled labour, is one that is exercising the attention of many public-spirited men in British Columbia. In Vancouver there are some thirty-five apprentices who have been placed in positions, under the care of a group of men who represent many walks of life, and are known as the Vancouver Apprenticeship Council. So many boys are now eligible for apprenticeship that it has been deemed necessary to ask the legislature to pass an act respecting the training of apprentices. The proposed act has for its purpose the legalizing and extending of that form of apprenticeship whereby training is given to young persons in trades which require continuous teaching and opportunity of acquiring proficiency in that trade for a definite term of years. The act would at first be confined to certain specified trades in the building construction industry, such as carpenters, painters and decorators, plasterers, sheet metal workers and millworkers. The act would not compel anyone to have or to take an apprentice. Its main object is to secure proper conditions for the apprentice in any trade which, by voluntary application of a certain number of employers, or by agreement between employers and employees, makes application to come under the provisions of the act, and even then no individual employer is compelled to take apprentices.

It is proposed that where necessary, having relation to the number of industries and opportunities for training apprentices, similar district apprenticeship committees to the the one in Vancouver be set up elsewhere in the province. The administration of the act would largely be in the hands of local apprenticeship committees serving in an honorary capacity, as is at present the case under the Vancouver Council. The proposed act is largely modelled on the one at present in force in Ontario, and which has under its care some 1,500 apprentices with very satisfactory results. The situation at present is that there is a lengthy waiting list of boys eligible for apprenticeship, but for whom at the moment places cannot be found.

Special Classes at Institute of Technology and Art at Calgary

Special classes in automotive electricity, welding and third year auto service work have been started for the winter term at the Institute of Technology and Art, Calgary, with an attendance of 50. The two courses in automotive work will be conducted over a period of three months, while the welding course will take up only three weeks' time. The enrolment in the welding class is almost double the figure recorded last year.

Apprenticeship Classes at Kitchener-Walkerville Collegiate

A night class for apprentices will be formed at the Kitchener-Walkerville Collegiate probably early this year. Such a step will be necessary under the terms of the Ontario Apprenticeship Act. Apprentices in the building trades will attend the courses of instruction. A check-up of conditions reveals the fact that eighteen young men will comprise the class, this number being at present employed in learning the rudiments of four branches of the building industry. A government grant will defray much of the expense incurred in conjunction with this class. The grant will be made on the same basis as payments now being made for similar classes elsewhere. Practical geometry, drawing and blueprint reading will be among the subjects taught.

International Kiwanis Plan Vocational Guidance

There are over half a million youths in the United States and Canada between the ages of fourteen and seventeen who are seeking vocational guidance. Placement of many of these boys is now being helped by the 1,835

Kiwanis Clubs which have made vocational guidance a major objective for 1930.

With 102,000 Kiwanians at work, the organization hopes to apply both general and specific technique to its vocational service. The work is now under way on the North American continent with school lectures on the various kinds of business and professional enterprises, the giving of individual counsel to find the likes, desires and aptitudes of youths, and finally the placement in surroundings where the young men and women can test out their capabilities.

THE FISHERIES INDUSTRY OF CANADA

THE "Fisheries Statistics of Canada, 1928", has been issued by the Dominion Bureau of Statistics, in collaboration with the Dominion and Provincial Fisheries Departments. The report contains an introductory sketch of this historic industry, which dates from the times ante-dating all authentic records, when the Normans, Bretons and Basques fished on the Atlantic cod-banks. The first grant of the fisheries of Canada was made by the King of France to de Monts in 1603. "Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has never since ceased to yield a perennial harvest both to Europe and America".

The extent and importance of this industry are set forth in the following paragraphs from the report:—

"Canada's fishing grounds are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The Bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000 square miles, or over four-fifths of the area of the fishing grounds of the North Atlantic. In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas they represent only a part of the fishing grounds of Canada. Hudson Bay, with a shore 6,000 miles in length, is greater in area than the Mediterranean Sea; the Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered, whilst throughout the interior is a series of lakes which together contain more than half of the fresh water on the planet, Canada's share of the Great Lakes alone amounting to over 34,000 square miles, a total which of course does not include Lake Winnipeg (9,457 square miles), Lake Manitoba, and others of even greater area.

"Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken. Judged by this standard, the Canadian cod, halibut, herring mackeral, whitefish and salmon are the peer of any in the world. It is possible therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada".

Review of Fisheries in 1928

Canada's fisheries production in the calendar year 1928 reached a total of $55,050,973 in marketed value, or $5,927,364 above the total for 1927. Only once before, save in 1918 and 1919 when the inflated prices of the war era prevailed, have the fisheries yielded a larger sum than in 1928.

The number of men employed in the catching and landing of fish—the primary operations of the fisheries—was 62,785, as compared with 63,415 in the preceding year, and in the fish canning and curing establishments 15,434 persons were employed as against 16,697 the year previously—a total personnel of 78,219 directly engaged in the fishing industry or 1,893 fewer than in 1927. The interesting point will be noted that though there was a decrease in the number of persons engaged in the industry in 1928 as compared with 1927 the catch and marketed value for the Dominion as a whole were both larger in 1928 than they had been in the previous year. Increasing use of powered craft and mechanical equipment in the fisheries is enlarging the productive capacity of the individual worker in the industry. The widening application of power in the fisheries is a factor which must be taken into the reckoning in any analysis of the changes from year to year in the size of personnel engaged in the industry. Capital investment showed some increase; amounting to $58,072,371, it was $1,765,910 greater than in 1927. It is also noted that while there was some increase in the capital investment in the industry in 1928, the indications are that there will be a further increase in the ensuing year.

Reckoning in terms of marketed value, forty-eight per cent of the Dominion's fisheries pro-

duction for 1928 is to be credited to British Columbia. The Maritime province accounted for thirty-two per cent, Ontario for seven per cent, the prairie provinces and the Yukon territory, together, for seven per cent, and Quebec for six per cent. Only in the case of one of the provinces, Prince Edward Island, was there a decrease ($171,126) in marketed value as compared with 1927. From the standpoint of marketed return, the salmon fishery was first in importance during the year and the total production from this fishery, increasing by some $3,000,000 as compared with the year before, had a value of $17,867,053. The cod fishery ranked next with a production valued on the markets at $6,285,777. The lobster fishery was third in marketed value —$5,183,988. In the case of both halibut and herring the year's production amounted to more than $3,000,000. Pilchard production was above the $2,000,000 mark and the marketed value of the catch of whitefish, most important among the inland fish from the standpoint of marketed return, was also more than $2,000,000. The haddock, pickerel, sardine, smelt, and trout fisheries, respectively yielded marketed values of over $1,000,000.

The following table shows the number of employees in the fisheries, by provinces, in 1928:—

Province	On vessels, boats, etc.	In fish canning and curing
Prince Edward Island	2,396	1,211
Nova Scotia	15,857	3,738
New Brunswick—		
Sea	10,596	2,035
Inland	444	.....
Quebec—		
Sea	8,695	1,274
Inland	2,152	.....
Ontario	4,128	.....
Manitoba	4,172	.....
Saskatchewan	1,084	.....
Alberta	1,401	.....
British Columbia	11,818	7,176
Yukon	428	.....

Fish Canning and Curing

The number of fish canning and curing establishments in operation in Canada in 1928 was 713, classified as follows: 375 lobster canneries, 67 salmon canneries, 22 clam canneries, 5 sardine and other fish canneries, 204 fish curing establishments, and 40 reduction plants.

Employees and Wages.—There were 15,434 persons employed in the industry in 1928, comprising 630 salaried employees, 10,579 wage-earners, and 4,225 contract workers or piece workers. The last classification includes chiefly contract workers who are employed in the salmon canneries of British Columbia, where a large part of the work is done under contract, the contractor engaging and paying his own workers and being himself paid by the cannery operator according to the quantity of fish packed. More than half of the workers in British Columbia salmon canneries are employed under this arrangement. Compared with the preceding year the total number of employees shows a decrease of 1,263.

The months of highest employment in the industry as a whole were June, when 9,418 wage-earners were employed and May, 8,942; while the months of lowest employment were February, with 1,468 wage-earners and January with 1,719.

The annual census of fish canning and curing establishments shows the form of organization, the time in operation and the hours worked by wage-earners. A classification of the returns of 1928 according to form of organization shows that 329 establishments were operated by individuals, 126 by partnerships, 250 by joint stock companies, and 8 by co-operative associations.

The average working day for wage-earners in 1928 consisted of 8.6 hours, and the average week of 50.8 hours. A classification of wage-earners according to the number of hours worked in month of highest employment shows 4,536 employees working 8 hours per day or less; 3,045 working 9 hours, 5,072 working 10 hours, and 284 working over 10 hours. Statistics in detail are included in the general tables of the report.

Fishing Bounty.—Under the authority of "An Act to encourage the development of the Sea Fisheries and the Building of Fishing Vessels", the sum of $160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Marine and Fisheries, among fishermen and fishing vessel and boat owners on the Atlantic Coast, under regulations made from time to time by the Governor in Council.

For the year 1928, payment was made on the following basis:—

To owners of vessels entitled to receive bounty $1 per registered ton; payment to the owner of any one vessel not to exceed $80.

To vessel fishermen entitled to receive bounty, $7.50 each.

To owners of boats measuring not less than 12 foot keel, $1 per boat.

To boat fishermen entitled to receive bounty, $6.50 each.

There were 9,390 bounty claims paid. In the preceding year there were 9,609 bounty claims paid.

The total amount paid in 1928 was $151,411.20 allocated as follows: to 553 vessels and their crews, $41,099.50; to 8,837 boats and their crews, $110,311.70.

MINERAL PRODUCTION OF CANADA DURING 1929

FOR the fourth year in succession, the mining industry of Canada reached a new high record output in 1929, when the value of production amounted to $303,876,000 or 10·5 per cent more than in the preceding year, according to the official estimate compiled by Mr. S. J. Cook, chief of the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics at Ottawa, recently published in a preliminary report issued by the Bureau. During the year new records were established in the output of asbestos, cement, clay products, copper, gold, gypsum, lime, nickel, petroleum, salt, stone, sand and gravel, zinc, and in the value of natural gas. The total increase in the value of the mineral output in 1929 over 1928 was $28,887,000.

Metals as a group showed the greatest gain at a total of $151,327,000 as compared with $132,012,454 in 1928. This was a gain of $19,315,000 or 14·63 per cent. Fuels at $76,116,000 as compared with $74,413,160 in the preceding year showed a net gain of 3 per cent or $1,703,000. Other non-metallics had a value of $21,205,000 as against $18,826,692 in the preceding year. The gain in this section was 12·6 per cent or $2,378,000. Structural materials including brick, tile, cement, lime, stone, sand and gravel valued at $55,228,000 as compared with $49,737,181 in 1928 showed a gain of 11 per cent or $5,491,000.

In order of total values, the leading mineral products of Canada are: coal, copper, gold, nickel, cement, lead, asbestos, clay products, silver, zinc, stone, natural gas, sand and gravel, lime, petroleum, gypsum, cobalt, salt, and platinum metals. This list of 19 products includes all that reach an output value of one million dollars or over annually. Together they make up about 98 per cent of the total value of Canada's mineral production. In addition to these main products, about 50 other minerals were recovered in commercial quantities during the year. Canada produces 90 per cent of the world's nickel; 85 per cent of the world's asbestos; 55 per cent of the world's cobalt; 9 per cent of the world's gold; 8·7 per cent of the world's lead; 8·4 per cent of the world's silver; 6·4 per cent of the world's zinc; and 4 per cent of the world's copper. Comparative figures for 1929 and 1928 are shown in the accompanying table.

OFFICIAL ESTIMATE OF THE MINERAL PRODUCTION OF CANADA, 1929, WITH COMPARATIVE FIGURES FOR 1928.

	1928	1929
	Value	Value
	$	$
METALLICS		
Gold	39,082,005	39,585,000
Silver	12,761,725	11,870,000
Nickel	22,318,907	25,700,000
Copper	28,598,249	43,362,000
Lead	15,553,231	16,551,000
Zinc	10,143,050	11,009,000
Cobalt and platinum metals	3,009,062	2,248,000
Other metals	546,225	1,002,000
Total	132,012,454	151,327,000
NON-METALLICS		
Fuels		
Coal	63,757,833	62,965,000
Natural gas	8,614,182	9,202,000
Petroleum, crude	2,035,300	3,945,000
Peat	5,845	4,000
Total	74,413,160	76,116,000
OTHER NON-METALLICS		
Asbestos	11,238,360	13,337,000
Feldspar	284,942	325,000
Gypsum	3,743,648	3,666,000
Mica	87,168	120,000
Quartz	523,933	500,000
Salt	1,495,971	1,560,000
Talc and soapstone	219,358	225,000
Other non-metallics	1,233,312	1,472,000
Total	18,826,692	21,205,000
Total Fuel and Non-Metallics	93,239,852	97,321,000
CLAY PRODUCTS AND OTHER STRUCTURAL MATERIALS		
Clay products (bricks, tile, sewer pipe, pottery, etc)	12,381,718	13,055,000
Cement	16,739,163	19,595,000
Lime	4,534,568	4,878,000
Stone, sand and gravel, etc	16,081,732	17,700,000
Total	49,737,181	55,228,000
Grand Total	274,989,487	303,876,000

The New Brunswick Federation of Labour is in session at Moncton as this issue goes to press. Some of the matters under consideration are the proposed adoption by the Province of the federal Old Age Pensions Act; legislations to provide for the establishment of Mothers' Allowances and Minimum Wages for Women; amendments to the Workmen's Compensation Act and the Factory Act; and the report on the child welfare survey recently made by the Canadian Council on Child Welfare, which recommended various legislative enactments.

REORGANIZATION OF COAL MINING IN GREAT BRITAIN

Provisions of Government's Coal Mine Bill

THE Coal Mines Bill was introduced by the Government in the House of Commons of Great Britain on December 11. The measure is divided into four parts, as follows:—

Part I proposes to regulate the production, supply, and sale of coal by means of a central co-ordinating scheme for the whole of Great Britain, and district schemes for all colliery districts; and these schemes, when approved or made by the Board of Trade, will have statutory effect. The Bill contemplates that these schemes may also provide for enabling financial assistance to be granted from within the industry itself to any branch or branches of the industry which are considered by the industry as a whole to require such assistance in order to extend or maintain the general volume of trade. The interests of the several districts as between each other, and the interests of the individual colliery owners in the several districts, are safeguarded by provisions for independent arbitration.

The public interest is protected by the fact that all details of every scheme must be approved by the Board of Trade and further by the provision for the formation of a national committee of investigation, containing representatives of consumers, whose duty it will be to inquire into any complaints made as to the operation of the central scheme. Similar committees with similar duties may be formed in every district. These investigation committees are given the necessary powers to enable them to obtain information relevant to their inquiries; and provision is made that, if any complaints reported by them to the Board of Trade as to the operation of a scheme in any district are not rectified to the satisfaction of the Board, the Board may direct that the scheme shall cease to have statutory effect; and that, unless they are satisfied that voluntary arrangements have been made in the district for securing the necessary co-operation with other districts and compliance with the central scheme, the Board may make a new scheme for the district.

Part II.—Section 3 of the Coal Mines Regulation Act, 1908, provided that the normal maximum period, during which miners might be below ground, could be increased by one extra hour on not more than sixty days in any calendar year. The Coal Mines Act, 1926, provided that during the continuance of that Act, i.e., until July 8, 1931, the normal maximum period (which had in the meantime been reduced by one hour by the Coal Mines Act 1919) could be increased by one extra hour on *every* working day instead of only on sixty days. Part II of the Bill proposes that, during the continuance of the Coal Mines Act, 1926, this extra hour shall be reduced to half an hour.

Part III authorizes the Board of Trade to set up a Coal Mines National Industrial Board with powers to investigate and report upon any dispute as to the terms of a proposed agreement for the regulation of the wages or other conditions of colliery workers in any district where there has been a failure to settle the dispute in accordance with any arrangements in force in the district.

Part IV contains certain general provisions, including an interpretation clause.

Under the provisions of the Bill the expenses of the committees of investigation and of the Coal Mines National Industrial Board are to be provided out of moneys provided by Parliament. The aggregate cost of these services is not expected to exceed £35,000 per annum.

Value of Perquisites of Farm Labourers in U.S.A.

The United States Department of Agriculture recently published a preliminary report on "The Perquisites and Wages of Hired Farm Hands." Farm wages are often estimated on the basis of the cash paid, and comparisons with non-agricultural wages give the impression that farm wages are distinctly lower than those in other industries. Real farm wages, however, are declared to be not actually lower than those for many other classes of labour. For the United States as a whole the total average monthly value of all the perquisites of farm labourers was $30.34; the amount of their wages was $46.44; the average total income each month being valued at $76.78. These averages are based on reports concerning 2,117 individuals. Wages were reported paid in cash alone in 109 cases, averaging $58.68. The quarterly wage rate reports issued by the Division of Crop and Livestock Estimates, give average monthly wage rates of farm labourers in 1925 as $33.91 with board, and $47.84 without board.

Practically two-fifths of the remuneration of non-casual farm hands was found to consist of perquisites. The proportion runs distinctly lower where wages are highest, as in New England and on the Pacific Coast. The reverse tendency is characteristic of the South

Atlantic and South Central States. The southern tendency is to give farm hands house or cabin and fuel, and often food for their own tables, rather than board and lodge them as in the rest of the country. Certain kinds of farm products are frequently supplied. Milk is reported a perquisite in over a quarter of cases, and constitutes most of the values of the dairy and poultry group. Pork, including bacon and ham, makes up most of the bulk, value and frequency of the meats. Flour and meal are given about equally in frequency and in closely like quantities. They are seldom reported outside the South. Potatoes and apples are the principal vegetables and fruits in frequency. Values of the other vegetables or fruits, when given, are much the same.

Rural Credits in Australia

The Dominion Office of Great Britain published recently a report of rural credits in Australia, prepared by a special committee which investigated this subject at the direction of the Oversea Settlement Special subcommittee of the Imperial Conference held in November, 1926. The committee was composed of representatives of Great Britain and Australia and of co-operative organizations.

In regard to long term credit the committee found that adequate lending facilities were already in existence in Australia. "The most important of these facilities," it is stated, "are provided by the savings banks or other institutions under the control of the State governments, whose funds are guaranteed by the State. Such a system clearly can provide cheap credit. If it is felt that there is no objection to the indefinite extension of a credit system which leans upon the State governments as ultimate guarantors of the funds loaned to agriculture, these institutions would seem to offer the simplest way of providing mortgage credit at low rates of interest. If, on the other hand, it is felt that on the grounds of public finance rural credit should ultimately be freed from its dependence on the national credit, steps should be taken to organize the debentures of the State savings banks and other mortgage institutions as independent agricultural investments, secured solely upon agricultural wealth.

"In order to strengthen such a system, and thus to reduce as far as possible the cost of credit, it is recommended that co-operative farm loan associations should be formed by producers, modelled on those of the Federal Farm Loan System in America, and that mortgage loans should be made through their agency. This recommendation is subject to there being reasonable grounds for expecting the Australian producer to be willing to adopt some form of co-operative guarantee of loans made by mortgage institutions. Steps should be taken to develop uniformity in procedure between one State and another in regard to the granting of mortgage credit, and this should include, if possible, a standard form of agricultural mortgage. The Commonwealth Government, in consultation with the State Governments, should consider the advisability of constituting some central governing Board similar to the Federal Farm Loan Board in the United States of America, empowered to co-ordinate the activities of the various mortgage institutions."

Marketing Credit.—"Marketing credit should not only provide the producer with a reasonable advance on his produce at the time of production, but it should assist in promoting the orderly marketing of the produce after it has left the producer. Credit for marketing purposes can be obtained from the Rural Department of the Commonwealth Bank (by associations of producers) and from the other banks. It is not considered that any further lending machinery is required. To develop marketing credit from these sources is primarily a question of extending, strengthening, and unifying marketing associations of producers. It is recommended that consideration should be given to the question of establishing some Commonwealth or inter-State authority for the supervision of the constitution and working of marketing associations."

Production Credit.—This includes short-term and what is sometimes called "intermediate" credit.

"Intermediate credit was introduced in the United States to provide loans of maturities ranging between nine months and three years. Having regard to the wide difference between the systems of rural credits in Australia and America, it is not considered that any special steps for the provision of intermediate credit in the Commonwealth are necessary. Accommodation of this type should be given by the State banks and joint stock banks. It is suggested that the formation of co-operative guarantee societies might be considered, particularly in the closer settlement areas, as an alternative to co-operative credit societies of the European type. The object of such societies would be to guarantee their members' bank overdrafts. Every effort should be made to organise new and existing co-operative trading societies, with a view to strengthening their credit status, on the lines which have been successfully followed in Denmark."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fifteenth Session of the International Labour Conference

The International Labour Conference, at its Thirteenth Session (October, 1929), decided to place on the agenda of the Fifteenth Session for final discussion the questions of the regulation of hours of work on board ship, the protection of seamen in case of sickness, the promotion of seamen's welfare in ports, and the establishment of a minimum requirement of professional capacity for captains, chief engineers and navigating and engineer officers in charge of watches. In accordance with the double discussion procedure after a preliminary general discussion, the Conference defined the principal points on which the Governments should be consulted with a view to the drafting of Conventions on these subjects.

In execution of these decisions, the International Labour Office has just published the texts of the four questionnaires which are to be addressed to the Governments of the States Members of the International Labour Organization, each questionnaire being accompanied by the report of the relevant committee of the Conference and a summary of the discussion which took place thereon in the plenary sitting.

Proposed Asiatic Labour Congress

In its issue of December 2, *Industrial and Labour Information,* the weekly publication of the International Labour Office, announced that active steps have been taken by representatives of workers' organizations in India and Japan for the holding next spring of an Asiatic Labour Congress to consider, among other matters, the subjects on the agenda of the 1930 Session of the International Labour Conference. The proposal to hold such a Congress was mooted as long ago as 1925, when the representatives of Indian and Japanese workers who attended the Seventh Session of the International Labour Conference met in Geneva and launched the project. Owing chiefly to unsettled conditions in China, it was found impossible to give early effect to the scheme. The Indian and Japanese labour movements, however, remained in contact, notably through their delegates to the Sessions of the International Conference and two months ago they concluded the final arrangements for the proposed Congress. It is proposed, subject to the approval of the Indian and Japanese trade union organizations, that the Congress should be held either in Bombay or in Madras about the end of April, 1930, and be open to all national trade union organizations in Asiatic countries which accept the objects and methods defined in its draft constitution. These objects include the bringing about of unity among the working classes of Asia, equality of treatment for all workers, the levelling up of conditions of life and work in Asiatic countries to the standards of those in more advanced countries, the promotion of international social legislation, and the combating of imperialism and capitalism. These aims are to be achieved by democratic and recognized trade union methods, including co-operation with other organizations so far as such co-operation appears useful in the interest of the trade union movement in Asia.

It is also proposed that the first session of the Congress should consider, in addition to the draft constitution and the agenda of the International Labour Conference, the problem of the conditions of the workers in the textile industry in India, Japan and China, a question which is already under investigation by the International Labour Office as part of the general enquiry demanded by the Conference last year.

Ratification of International Labour Conventions

Up to November 1, 1929, the total number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations was 377 (including nine conditional ratifications). At the same date the number of Conventions of which ratification had been authorized by the competent authority in the countries concerned, but had not yet been registered with the Secretary-General of the League of Nations, was 23.

Publications of the International Labour Office

The International Labour Office has just issued a Report on Migration Movements which covers the three years from 1925 to 1927. The Report is a continuation of those published in 1925 and 1926 on migration movements from 1920 to 1923 and from 1920 to 1924. The figures are taken from the current information provided by the various states as the outcome of a Recommendation adopted by the International Labour Conference in 1922 concerning the communication to the Labour Office of statistical and other information regarding emigration, immigration, and the repatriation and transit of emigrants.

Study of Social and Industrial Problems

Two of the Committees set up by the Governing Body of the International Labour Office to assist the Office in the study of social and industrial problems held mettings in Geneva during December.

The Advisory Committee on Professional Workers, which met for the second time, was appointed for the purpose of supplying the Governing Body with advice on any questions concerning the conditions of work of professional workers with which the Office may have to deal. It consists of three members of the Governing Body and two representatives of the International Committee of the League of Nations on Intellectual Co-operation—these five members form the permanent executive of the committee—and a number of representatives of national and international organizations of professional workers, together with experts appointed *ad hoc* according to the special questions to be considered. The Committee on Conditions of Work in the Textile Industry, which also met in December, was appointed by the Governing Body to advise it on the scope and methods of the investigation demanded by the International Labour Conference last year into "the conditions of work of men, women and children, employed in the textile industries of the various countries of the world, including wages, hours of work, hygienic conditions, and other conditions affecting their employment". This Committee is composed of twelve representatives of the Governing Body—four nominated by each of the three groups (Governments, employers and workers) on the Governing Body. At a previous meeting, the scope of the enquiry was considered; the Committee suggests that it should extend to twenty-two countries in Europe, Asia and America. Last week it dealt with the procedure to be followed in conducting the enquiry.

UNITED STATES RECORD OF CANADIAN IMMIGRANTS, 1928-29

THE annual report of the United States Commissioner General of Immigration to the Secretary of Labour for the fiscal year ended June 30, 1929, states that during this period the United States received 279,678 immigrants and lost 69,203 emigrants, a net gain of 210,475 as compared with a net gain last year of 229,798. The report gives the following particulars concerning immigration from Canada:—

"The total recorded number of aliens of all classes admitted at points along the Canadian land border, including those coming originally for permanent or temporary residence and those returning after an absence of more than six months, was 74,386. Of this number, 48,939, or 65·8 per cent, were natives of non quota countries, principally Canada; 13,891, or 18·7 per cent, entered as quota immigrants being mainly of European birth; and 9,465, or 12·7 per cent, as visitors for business or pleasure, transits, and returning residents. The remaining 2,091, or 2·8 per cent, were of miscellaneous classes, embracing 43 Government officials, their families, attendants, servants, and employees; 21 aliens to carry on trade under existing treaties; 882 wives, 331 husbands, and 122 unmarried children of American citizens; 240 wives and 12 unmarried children of natives of non-quota countries; 103 ministers of religious denominations and 28 wives and 23 unmarried children of ministers; 20 professors and 6 wives and 3 unmarried children of professors; 155 students; 85 women who had been American citizens; and 17 American Indians born in Canada.

"Over two-thirds of the aliens admitted via the northern land border were born in Canada, 51,571 giving that country as their place of birth; 21,089 were of European birth, principally Great Britain; 647 were born in Newfoundland and 287 in other sections of the Western Hemisphere; 415 gave Asia as their place of birth; while 120 were natives of Africa and 257 of Australia, New Zealand and the Pacific Islands. The bulk of these aliens from Canada came from the Provinces of Quebec and Ontario, 33,084 entering through the Montreal immigration district, 7,944 through the Buffalo district, and 17,657 through the Detroit district. In the western section, 6,653 aliens were admitted at points in the Grand Forks (North Dakota) district; 2,482 came via the Spokane district, and 6,566 via the Seattle district.

"Of the 74,386 aliens coming over the Canadian border during the year, 64,846 were classified as immigrants and 9,540 as non-immigrants. The vast majority of the former were admitted under the Immigration Act of 1924 as natives of Canada non-quota, or as quota immigrants, natives of other countries. Of the non-immigrants, over 91 per cent came in as temporary visitors or as transits. The volume of newcomers or immigrants from Canada last year was not only the smallest since 1922, but it was less than one-third of the number for 1924, the peak year of immigration from that country, when 200,834 immigrants came to the United States over the northern land border.

"Immigration statistics show that nearly two-thirds of the 64,846 immigrants entering via the Canadian border last year were adults, 40,550 or 62·5 per cent being over 21 years of age, and 21,345, or 53 per cent of these adults were males. Of these immigrants, 33,846 were males and 31,000 females; 9,693 were under 16 years of age, and 14,603 from 16 to 21 years; 19,466 ranged in age from 22 to 29 years, 9,041 from 30 to 37 years, 4,333 from 38 to 44 years, and 7,710 from 45 to 60 years and over. The single males numbered 22,427 and the single females 17,511, the married males 10,699 and the married females 11,628, the widowers 630 and the widows 1,729, the male divorced 90 and the female divorced 132. Among the wage-earning immigrants, 15,022 were recorded as skilled and 3,584 as in the professional class. There were 4,362 servants, 3,148 farmers, 2,690 farm labourers, and 5,713 common labourers; 3,257 were of the miscellaneous classes and 27,070 mainly women and children were listed as having no occupation."

According to returns from the Department of Immigration and Colonization the number of Canadians who returned to Canada from the United States during the eight months from April to November, 1929, inclusive, was 22,608 persons. Of this number 20,332 were Canada-born citizens; 1,581 were British subjects with Canadian domicile; and 695 were naturalized Canadians with domicile.

Nurses' Annuity Plan in United States and Canada

A number of members of the nursing profession in forty-one of the United States and in three Canadian provinces are building up retirement income annuities through the Harmon Association for the Advancement of Nursing. This service of the Association was opened to registered nurses in January, 1929. In its final form, the plan received the endorsement of the American Nurses' Association, the National League of Nursing Education, and the National Organization for Public Health Nursing, at the meeting of their joint boards of directors last January. Since that time the advantages of an annuity to the nurse, whose income is sporadic and often decreases with age, have spread, and membership in the Association has grown to cover a large part of the United States and sections of Canada. There are included those in private duty and hospital work, visiting nurse associations, public health departments, commercial industrial and manufacturing companies. Among the features of the plan are:—

1. A permanent monthly income for the member's own use, which, once begun, continues throughout the remainder of life.

2. No medical examination.

3. Convenience to the member in accumulating a fund and in the receipt of monthly income checks.

4. No forfeiture of any deposits.

5. Absolute safety for the investment.

6. In case of any emergency, the privilege of borrowing against or of withdrawing all of the deposits at any time, previous to the beginning of the annuity payments, or of discontinuing further deposits, leaving those already made in the fund, and receiving at retirement age whatever annuity income they will provide.

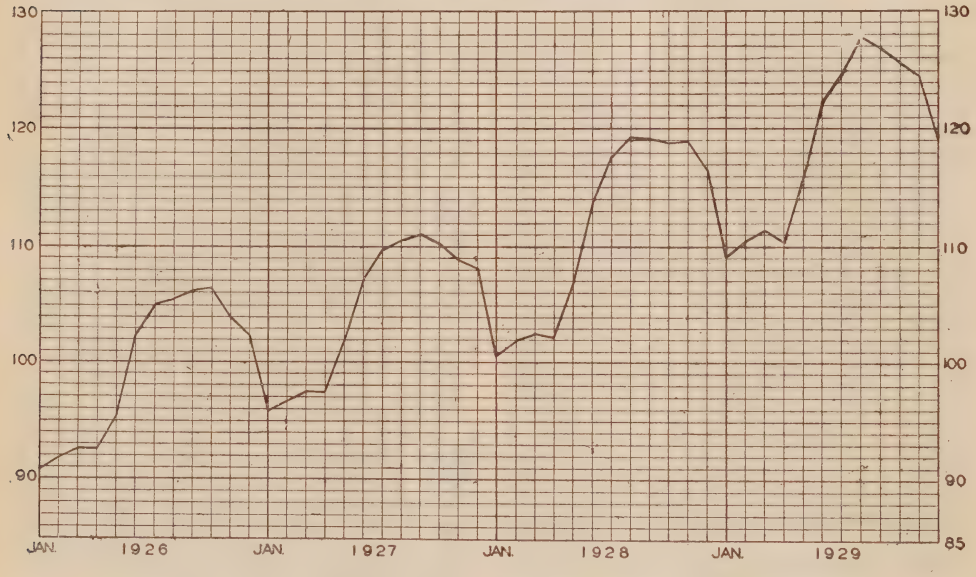
7. In case of the member's death, the immediate cash payment to the beneficiary of the full credit balance in the deposits.

8. An organization through which funds from legacies, endowments, gifts, excess interest, or other sources may be administered for the member's benefit.

9. Membership in an association organized for the special purpose of assisting registered nurses in their financial provisions for their future, guided by their own trustees and officers chosen by the members themselves.

The District Court at Butte, Montana, gave a decision in November in the case of a school teacher who sued for wages under a State law which protects "labourer's" pay. The judge ruled that the word "labourer" as used in the statute included those persons who are engaged for pay to exercise their minds for useful ends.

A government notice recently published in the *South African Gazette* announced that holiday periods were to be observed in the building industry in the Capetown area from December 24, 1929, to January 6, 1930, and from December 24, 1930, to January 5, 1931. During these periods no work except essential services was to be performed. All building employees in the area were required to contribute 5 shillings a week to the Holiday Fund, administered by the Secretary of the Local Committee of the National Industrial Council for the Building Industry at Capetown.



ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1929

EMPLOYMENT in Canada during 1929 was on the whole in decidedly greater volume than in any other year on record; its fluctuations during the year differed to some extent from those indicated in 1928 and preceding years, and towards the autumn and winter there was a certain amount of unemployment, particularly in the West, as a result of the small harvest and the grain congestion, while the stock market depression also had a retarding influence upon industry. In spite of these unfavourable factors, the number employed by the firms furnishing data to the Dominion Bureau of Statistics was greater each month than in the same month in 1928, when industrial activity attained its previous maximum. On December 1, 1929, the index, calculated on the average for 1926 as 100, stood at 119.1, and was ten points higher than at the beginning of the year, while it was only slightly lower than the 1928 peak of 119.3 registered on August 1. It was substantially higher than on December 1, 1928, when it stood at 116.7, indicating a gain of some 20,000 employees on December 1, 1929, as compared with the same date of 1928. These data are based upon returns from employers in practically all lines of industry except agriculture, with payrolls aggregating well over a million workers during 1929, so that a high index generaly indicates very satisfactory business conditions throughout the Dominion.

Steady improvement was shown from early in January until the end of March, when there was a slight recession due to the fact that Easter last year fell upon March 31; many firms customarily take advantage of the Easter holidays to close their plants for a few days, and when these temporary shutdowns occur at the beginning or end of the month, they are reflected in the index of employment. During April, the upward movement was strongly resumed, and continued until August. From the beginning of September, however, a moderate slowing up was in evidence until the end of the year, but, as clearly shown in the accompanying chart, the situation continued more favourable than in 1928 and earlier years for which statistics are available. During the period of expanding employment, some 174,000 persons were added to the payrolls of the co-operating employers, a number greater than in the same period of any other year on record. As is the case in most years, the largest advances during 1929 were shown at the beginning of May and June.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

The Dominion Bureau of Statistics tabulated payroll data from some 6,700 firms who employed a monthly average of 1,020,635 workers during 1929, their staffs varying between 918,780 on January 1, and 1,097,812 at the beginning of August. The index, calculated upon the average for the calendar year 1926 as 100, reached its peak for the year in that month, standing at

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

Average calendar year, 1926=100

[1]The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here shown for the 12 months, Jan. 1—Dec. 1, 1926, generally shows a slight variation from 100.

127.8, which is the maximum so far recorded. In 1928, the peak was 119.3 on August 1, while that in 1927 was 111.0 on September 1. The index averaged 119.0 during the year under review, as compared with 111.6 in 1928, 104.6 in 1927,* 99.6 in 1926, 93.6 in 1925, 93.4 in 1924, 95.8 in 1923, 89.0 in 1922 and 88.8 in 1921.

As in the last few years, an outstanding feature of the situation during 1929 was the marked expansion in construction, in which the number of workers covered by these statistics considerably more than doubled between February and August. Manufacturing showed consistent gains for many months, consolidating the favourable position established in 1928, and affording much more employment than in earlier years of the record. Mining, logging, services, communications and trade were all much more active than in preceding years, employment in these industries attaining the maximum so far reached in this record. Transportation averaged rather higher during 1929 as a whole, although the group was seriously affected towards the latter part of the year by the delay in the movement of the crop.

Employment by Economic Areas

Firms in all provinces generally reported greater activity in 1929 than in 1928. The index, based upon the 1926 average as 100, was higher in the Prairie provinces and Ontario than elsewhere, these two areas indicating more pronounced improvement over the preceding year than was the case in the remaining provinces.

Maritime Provinces.—In the early part of 1928, employment in the Maritime provinces showed the customary decrease, succeeded by seven months of expansion. At the beginning of September and October, curtailment was noted, but this was less than in the same months in 1928. The trend was again upward on November 1, but further contractions were indicated in the succeeding month. The index number averaged 114.8 during 1929, as compared with 106.6 in the preceding year, and 105.7 in 1923, when activity reached its highest levels in the years prior to 1928. Manufacturing, as a whole, afforded a greater volume of employment in 1929 than in 1928, the index averaging over seven points higher. The textile industries, which had been comparatively dull throughout the preceding year, showed gains in 1929; lumber, pulp and paper and iron and steel reported a much more favourable situation, the activity in the last named being particularly noteworthy, both in its local effect and as an indication of generally improved conditions in industry. The index in iron and steel averaged 127.7 in 1929, as compared with 109.8 in the preceding year, and with 100 in the basic year, 1926. Despite the tie-up in the movement of grain, which affected the general situation towards the end of the year, transportation afforded more employment than in 1928, the average being several points higher. Construction was considerably brisker throughout the year, and continuation of work on several important projects forecasts further activity during 1930. Services, communications and trade registered a higher level of employment than in any other year of the record. The aggregate payrolls of the 530 reporting firms in the Maritime provinces averaged 77,007 persons, as compared with 70,772 in the preceding year.

Quebec.—Employment in Quebec showed rather more fluctuations than in 1928; the period of expansion during the summer was shorter, but in this period a larger number of persons were added to the staffs of the reporting firms than was the case in the preceding summer, while the situation each month was more favourable than in the corresponding month in any of the last eight years. From the low point of 101·1 on April 1, the index rose to 122·8 at its peak on November 1, and at the beginning of December it was 118·4, or over 15 points higher than on January 1. The labour forces of the 1,526 co-operating employers varied between 249,025 and 309,432 workers on the dates of minimum and maximum activity, respectively, averaging 281,403 for the twelve months. The mean index was 113·4, as compared with 108·3 in the preceding year. Manufacturing as a whole was much brisker in every month of 1929 than in the same month of other years for which data are available. Lumber, iron and steel and other manufactures recorded a materially larger volume of employment than in the preceding year, while rather reduced activity was indicated, on the whole, in textiles, and employment in pulp and paper was practically unchanged. With the continuation of development work in the newly prospected mining areas of Quebec, employment in this industry has been maintained at a high level, but further improvement may be expected when operations are more fully established. Communications, services, transportation and trade were all more active than in 1928; construction, during the greater part of 1929,

*As the average for the calendar year 1926, including figures up to December 31, 1926, is the base used in computing these indexes, the average for the 12 months, January 1-December 1, 1926, generally shows a slight variation from 100.

afforded more employment than in the preceding year, the index averaging a few points higher; this group should be very active in Quebec during 1930, with the commencement of work on several large power development undertakings, as well as on a number of industrial buildings now projected. Employment in logging camps was in much greater

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

Average calendar year, 1926=100

NOTE:—The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

in the record. An average staff of 431,044 employees was registered by the 3,047 firms furnishing data in Ontario, as compared with the mean of 388,995 in 1928, while the number of employees per establishment averaged 141 compared with 131 in 1928. The mean index was 123·1 in 1929, or nearly ten points higher than in the preceding year. Manufactures consistently reported a better situation, the index being higher in every month than on

[1]The average for the calendar year 1926, including figures up to Dec. 31, 1926, being the base used in computing these indexes, the average index here given for the 12 months Jan. 1—Dec. 1, 1926, generally shows a slight variation from 100.

the same date in 1928, and also averaging a few points higher than that for manufacturing in Canada as a whole. Employment in iron and steel, pulp and paper, food, electrical apparatus, building material, non-ferrous metal, lumber, textile and other factories showed decided improvement over the preceding year. The general advance in iron and steel products is particularly significant, in view of the dullness of recent months in the automobile trades which are largely centered in Ontario. Nearly all divisions of the iron and steel industry showed expansion during 1929. Operations in logging camps showed a marked increase, having never before been on so large a scale. Mining, communications, transportation, con-

struction and maintenance, services and trade employed considerably larger payrolls, the improvement in construction and trade in this province being especially important; the gains in the service group took place chiefly in the hotel and restaurant division, and are in part a result of the immense tourist trade during the vacation months.

Prairie Provinces.—Important expansion was indicated in the Prairie Provinces during the summer months; the payrolls of the employers furnishing data averaged 145,100 persons during the year and the index averaged 126·3, while in 1928 an average payroll of 130,062 workers, and a mean index of 117·9 were recorded. Towards the autumn, the small

harvest and the delay in marketing the grain caused a slackening of activity in the Prairie Provinces, affecting more particularly the transportation industries, but also business in general, and resulting in considerable unemployment among agricultural workers, who are not represented in these statistics. Despite these depressing factors, the level of employment in manufacturing, mining, communications, transportation, construction and maintenance, services and trade was, on the whole, much higher in 1929 than in 1928, when the situation generally was better than in earlier years of the record. Within the manufacturing group, there were important gains in the lumber, iron and steel and other industries. Construction work in connection with the development of the power resources of these

provinces was maintained at a high level during 1929, and that of a more general nature was also brisk. Highway work was exceedingly active, being facilitated by the favourable weather and labour conditions for this industry which prevailed during the summer.

British Columbia.—The firms reporting in British Columbia employed an average working force of 86,081 employees, while in the preceding year the mean was 80,692. The index averaged 111·5, the highest on record, as compared with 106·4 in 1928. At the end of the year, employment was some eight points higher than at the beginning. Practically all groups of the manufacturing division showed heightened activity, the advances in pulp and

paper, textiles and iron and steel plants being most noteworthy. Logging, mining, transportation, communications, services and trade were much busier during the greater part of 1929 than in 1928, while slight gains were shown in construction. The improvement in logging is important, as this and the lumbering group have been quiet in recent years.

Index numbers by economic areas are shown since 1926 in Table I.

Employment by Cities

Employment in the eight centres for which separate tabulations are made showed improvement during 1929 as compared with 1928 and previous years of the record. Windsor

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1926-1929—Continued

(NOTE:—Average calendar year, 1926 = 100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.)

and the adjacent Border Cities, Hamilton and Quebec City reported higher index numbers of employment than was the case elsewhere, while Hamilton, the Border Cities and Toronto showed the greatest gains over the preceding year.

Montreal.—The staffs of the Montreal firms making returns averaged 138,184 persons, as compared with an average of 125,545 on the payrolls of the employers reporting in 1928; the mean index, at 115·3, was over seven points higher than that for the preceding year. Almost uninterrupted increases were indicated from early in January until November, followed by the customary contraction on December 1. Manufacturing as a whole reported

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES, 1926-1929—Concluded

NOTE.—Average calendar year, 1926=100. The relative weight shows the proportion of employees in the indicated industry to the total number of employees reported in Canada by the firms making returns on the date indicated.

marked gains, especially in vegetable food, printing and publishing, tobacco, distilled and malt liquor and iron and steel plants: on the other hand, textile factories registered a lower average of employment. Communications and trade generally showed a much better situation than in 1928 or any other year of the record; in transportation and construction the index numbers averaged practically the same as in 1928, but were higher than in previous years for which data are available.

Quebec.—Considerable fluctuations were indicated in Quebec, but the index averaged higher than in earlier years of the record. From the low point of 112·8 on March 1, it rose to its maximum of 136·5 on September 1, and at the beginning of December was higher than the average for any previous year on record. The staffs of the employers furnishing data averaged 11,977 and the index averaged 124·2 in 1929, compared with 11,028 and 119·9, respectively, in 1928. Manufacturing, transportation and construction were more active; within the first-named, general improvement was noted except in the leather industry, which showed a contraction as compared with 1928.

Toronto.—Employment at the beginning of 1929 showed the usual pronounced curtailment, the losses being rather less extensive than in the same period of the preceding year. From February on, however, the trend was almost uninterruptedly upward until October 1, when the index reached its maximum of 126·3, an increase of 11 points since the first of January. Moderate declines were then indicated on November 1 and December 1, but the situation continued better than on the same dates in earlier years of the record. The index for the year averaged 121·3, as against 112·1 during 1928. The number of employees of the co-operating firms during 1929, averaged 123,927, while in the year before the mean was 111,992. Within the manufacturing group, food, iron and steel, textiles, printing and publishing and other plants recorded marked gains. Transportation, construction, communications, services and trade were also decidedly more active during 1929 than in 1928 and earlier years for which statistics have been compiled.

Ottawa.—Manufacturing on the whole reported practically the same volume of employment as in the preceding year, pulp and paper and other plants showing greater activity, while lumber mills were rather slacker. Gains were also shown in construction and trade, those in the former being especially noteworthy. A mean payroll of 12,695 workers was reported by the employers furnishing data, and the index averaged 120·7, as compared with 11,995 employees and an average index of 115·6 in 1928.

Hamilton.—Improvement was noted in Hamilton during the greater part of 1929, the index reaching the maximum so far recorded on August 1, when it stood at 135·8, and averaging 128·4 in the twelve months, as compared with 108·2 in 1928. Manufacturing, generally, was considerably brisker; the electrical apparatus and iron and steel industries maintained a much higher level of employment than in the preceding year, and textiles were also rather busier. Construction and trade were more active, especially pronounced advances being indicated in the former, as a result of an important program of industrial expansion carried on during 1929. The co-operating firms reported an average working force of 38,351 persons, while in the preceding year the average was 31,799.

Windsor and the adjacent Border Cities.—The index number of employment in the Border Cities averaged 153·2 and the recorded payrolls averaged 18,906 workers in 1929, compared with 137·3 and 16,447, respectively, in the preceding year, and 86·2 and 9,654, respectively, in 1927. Activity during the first half of 1929 was considerably greater than in the same months of 1928, but in the succeeding months it was lower, largely owing to curtailment in the automobile group. Employment in this industry was extremely brisk during 1928 and first part of 1929, but as already stated, towards the latter part of the year production declined, as was also the case in automotive plants in the United States. Other branches of manufactures registered expansion, and construction was also busier.

Winnipeg.—The situation in Winnipeg was more favourable in each of the first nine months of 1929 than in the corresponding month of the preceding year, while from September onward, it was not quite so good, mainly as a result of the smaller crop. The mean index of employment for the year was 112·3, compared with 110·1 in 1928. Manufacturing, in practically all branches, was much brisker, but transportation, construction and trade reported a slightly lower level of employment. An average staff of 32,813 was recorded by the firms whose data were received, an increase of over 1,900 as compared with the 1928 mean.

Vancouver.—Conditions in Vancouver were generally better, the index averaging 109·2 as compared with 104·3 in the preceding year, while the paylists covered averaged 28,883 persons as against 26,682 in 1928. An upward

movement was shown in manufactures as a whole during 1929 as compared with the preceding year, in spite of losses in the lumber industry. Communications, transportation, services and trade were decidedly more active, while construction averaged approximately the same.

Index numbers by cities are given in Table II.

Manufacturing Industries

Considerable expansion in manufacturing was an important factor in the general improvement registered in 1929, when activity in this division was greater than in any other year since 1920. Statistics were received from some 4,059 manufacturers employing, on the average, 555,280 operatives, as compared with the average of 508,462 reported by the 3,950 establishments reporting in 1928. The index averaged 117·1 per cent of the 1926 payrolls of the co-operating firms, and compared satisfactorily with an average of 110·1 in the preceding year. The mean payroll per establishment increased from 129 employees in 1928, to 137 in 1929, as compared with 123 in 1927. Practically all branches of manufacturing shared in the generally favourable movement, the only exception worthy of note being the leather group, which continued dull. Especially important were the gains in the iron and steel, rubber, lumber, food, pulp and paper and textile groups, which together employ a large proportion of the workers engaged in manufacturing processes. Although the usual seasonal heavy losses incidental to the holiday and inventory season will have reduced employment to a considerable extent on January 1, 1930, it may be expected that with the approach of spring the upward trend will be resumed.

Animal Products, Edible.—Employment in this division during 1928 was better than in any previous year of the record, and this high level was maintained in 1929. Fish-preserving factories and dairies registered marked activity, while meat-packing plants reported smaller staffs. The payrolls of the reporting employers averaged 18,175 persons, varying between 15,883 on March 1, and 20,433 at the beginning of August. The mean index was 113·8, compared with 111·2 in 1928.

Leather and Products.—Boot and shoe and other leather-using factories, on the whole, afforded less employment than in the preceding year; an average working force of 16,460 employees was recorded by the co-operating establishments, and the mean index was 93·1, as compared with 100·7 in 1928.

Lumber Products.—The seasonal movements always indicated in lumber works caused the usual fluctuations during 1929, when employment was generally brisker than in 1928. Steady gains between February 1, and August 1, were succeeded by consistent losses during the latter part of the year. The payrolls of the firms furnishing data ranged between 41,844 persons at the beginning of January and 63,865 on August 1, averaging 53,870 in the 12 months, as compared with the 1928 mean of 51,185. The average index, standing at 106·2, was several points above the mean for the preceding year; it was also higher than in earlier years of the record. Rough and dressed lumber mills recorded a larger volume of employment than in 1928, and improvement in that comparison was also noted in furniture and other lumber factories.

Musical Instruments.—Activity in musical instrument factories was not quite so pronounced as in 1928, according to statements from some 40 firms whose staffs averaged 3,027. The mean index stood at 100·6 in 1929, as compared with 101·4 in the preceding year. The production of radio apparatus is not included in this industrial group, which has undoubtedly been affected by the marked activity recently prevailing in that line.

Plant Products, Edible.—Employment in vegetable food factories, on the whole, was considerably better in 1929 than in the preceding year. The bakery, biscuit and confectionery industries reported greater activity; canneries afforded much more employment than in 1928, and flour and cereal mills were also busier. An average working force of 31,074 persons was registered by the reporting establishments, in which the number of operatives ranged between 26,584 on February 1, and 38,874 at the beginning of October. The mean, general index of 110·9 in 1929 compared favourably with the 1928 average of 103·2.

Pulp and Paper.—Continued development of the pulp and paper industries caused considerable increases, employment in this group being better in 1929 than in any other of the ten years for which records are available. The reported staffs averaged 66,036 employees and the index 111·4, as compared with 62,052 and 108·8, respectively, in 1928. Activity was maintained last year at a high level in pulp and paper mills; the printing and publishing group showed substantial advances, while no general change took place in paper product factories.

Rubber Products.—Activity did not advance so rapidly during 1929 as in 1928, but nevertheless employment continued in greater

volume than in any other year of the record. The mean index in 1929 was 139·5, compared with 128·7 in the preceding year. Footwear, tire and other rubber factories were active in Quebec and Ontario. The payrolls of the plants supplying information averaged 17,697, ranging between 16,895 workers on April 1 and 18,400 at the beginning of August; in 1928, the reported staffs averaged 16,206.

Textile Products.—Employment in the textile industries showed fluctuations which differed from those noted in 1928; considerable improvement was indicated during the first quarter of the year, followed by a lengthy period of inactivity, despite which, the situation was more favourable at the end of the year than at the beginning. The index averaged 107·2, as compared with 105·1 in 1928. An average staff of 81,367 employees was reported by the co-operating manufacturers, who averaged 555. Practically all branches of this group were busier, the greatest improvement being in thread, yarn and cloth and hosiery and knitting mills.

Tobacco, Distilled and Malt Liquors.—Statements were compiled from over 140 firms, whose working forces averaged 15,926 persons, varying between 14,315 on January 1, and 16,718 at the beginning of December. The mean index of 124·6 in 1929 was many points higher than in 1928, when it was 109·3. Tobacco factories and breweries were active during the year under review.

Chemical and Allied Products.—A higher level of employment than in previous years of the record was indicated in this group during 1929, when the index averaged 117·8 as compared with 110·5 in 1928. An average payroll of 7,841 workers was registered by the employers whose statistics were tabulated, as against the 1928 mean of 7,183.

Clay, Glass and Stone Products.—Improvement was reported during six months in 1929, when employment was in greater volume than in any other year of the record. The index number averaged 126·2, while in 1928 it was 111·4. The marked activity in building during 1929 is reflected in the personnel of building material factories, 139 of which reported an average working force of 12,585 persons. At the maximum, the number employed was 14,122.

Electric Current.—The number employed in electric current works was greater than in any other of the last ten years; the index averaged 127·6, as compared with 118·3 during 1928, the previous high level of the record. The aggregate staffs of the co-operating producers averaged 15,389 during 1929, when the average number on the payrolls of the individual firms making returns was 169, as compared with 158 in the preceding year.

Electrical Apparatus.—Employment in this division, which includes the manufacture of radios and equipment, was in greater volume during 1929 than in any other period on record, steady improvement having been shown in the first eleven months of last year. The reported payrolls included, on the average, 14,555 workers and the mean index was 143·8, as compared with 11,912 and 117·9, respectively, in 1928.

Iron and Steel Products.—Improvement in the general situation was noted during the first part of 1929, and, despite the succeeding period of curtailment, the index averaged 125.2, or between 12 and 13 points higher than in the preceding year, when employment was in turn, higher than in other years for which data are available. Gains were shown in all branches of the group, those in vehicle factories being particularly noteworthy, in spite of the falling off in automobile production which affected the situation in the latter part of the year. The crude, rolled and forged, machinery, agricultural implement and structural iron and steel groups also recorded great activity. The aggregate working force of some 660 manufacturers of iron and steel products who reported during 1929, averaged 161,126 persons, while in 1928 the mean was 143,013 and in 1927 it was 126,920; the average labour force per establishment in the year under review was 244 workers, or 29 more than in the preceding year, and 46 more than in 1927.

Non-Ferrous Metal Products.—Employment in this division fluctuated considerably during the year under review, but in every month was in greater volume than in the same month of any other year since 1920. The index averaged 132.8 and the reported employees 19,994, compared with 119.7 and 17,705, respectively, in 1928.

Mineral Products.—Employment in non-metallic mineral product plants was much brisker, the index standing at 138.2, as compared with 120.5 in 1928. Statements were received each month from over 80 firms with an average staff of 13,351 persons, as against 11,439 in the preceding year. The gas, petroleum and other divisions of this classification maintained a good volume of employment.

Other Manufacturing Industries.—Fur factories showed a more favourable situation than in the preceding year, and the production of wood distillates and extracts and of miscellaneous manufactured products also increased.

Logging

Logging camps, on the whole, reported decidedly greater activity than in 1928; in fact, the index averaged higher than in any other year for which data are available. The working force of the firms supplying information averaged 32,311 men and the index number 125.8 in 1929; in 1928, the mean index was 114.5 and the average payroll 27,518. As has already been mentioned in other issues, the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement, is increasing the difficulty of collecting current statistics on employment. As usual, the greatest variation in logging was in Ontario and Quebec, while in British Columbia a rather more constant volume of employment was afforded.

Mining

As in 1928, there were losses in employment in mining during the first part of 1929, followed by a series of advances lasting until the beginning of October, when declines were indicated; the gains during this period of expansion resulted in a more favourable situation than in any other year of the record. The index averaged 120.1, compared with 114.4 in 1928. In *coal-mining,* conditions were slightly better than in 1928, employment being generally more active. The mean index was 107.4, as compared with 106.4 in 1928, while the labour force of the co-operating operators averaged 27,666 workers in 1929. In *metallic ores,* the level of employment was decidedly higher, the index, at 139.2, averaging some twelve points more than in 1928, the previous maximum. The staffs of the reporting firms averaged 16,055 during the year under review, compared with 14,312 in the preceding year. When the operations planned in the newly prospected areas are established, employment in metallic ore mines may be expected to show further important advances. Non-metallic minerals (other than coal) registered greatly increased employment, an upward movement being recorded during a good share of the year. The index averaged 137.1, as against 123.8 in the preceding year; a mean payroll of 8,803 persons was employed by the co-operating firms, while those reporting in 1928 had an average of 7,876. Quarries, asbestos mines and other divisions coming under this heading recorded considerable activity, in sympathy with that generally prevailing in the construction industries.

Transportation

Heavy seasonal losses were shown in the first three months of 1929, after which the tendency was almost uninterruptedly favourable until the beginning of September, when the effect of the small crop in the West and of the delay in the movement of grain, was shown in curtailed employment.

However, the activity in the first nine months on steam railways, and throughout the year in local transportation, resulted in a higher level of employment in the twelve months as a whole. The index averaged 109.7, as compared with 105.9 in 1928. The transportation companies whose returns were tabulated employed, on the average, 124,462 workers, as compared with 118,759 in 1928. In the *steam railway division,* the index averaged 107.1, or less than one point higher than in 1928; at its peak on August 1, it stood at 113.3, which is the highest point yet reached. An average working force of 84,438 employees was recorded in steam railway operation, compared with 83,337 in 1928. *Street railways* and *cartage,* reporting an average payroll of 24,381 persons, were generally much more active, the index averaging 123.6, compared with 111.7 in 1928. Employment in *shipping* and *stevedoring* was also brisker than in 1928, in spite of the grain congestion; the mean index was 104.7, while the reported staffs averaged 15,643, varying between 10,614 persons on March 1, and 10,436 at the beginning of September. In the preceding year, the mean index was 96.4.

Communications

Telegraphs and telephones showed further substantial advances during 1929; the index averaged 120.6, or over twelve points higher than in 1928, the previous high level of this record. The personnel of the companies furnishing data averaged 29,077 employees, of whom some 78 per cent were engaged on telephones. The improvement during 1929 was general throughout the Dominion.

Construction and Maintenance

Very pronounced expansion was indicated by the construction industries in 1929; during the period of most marked activity, from February 1, to August 1, more than 100,000 workers were added to the forces of the co-operating contractors, whose payrolls averaged 122,239 during the 12 months, varying between 72,913 on February 1, and 177,459 at the beginning of August. The general index for this group averaged 129.7 compared with 118.8 in 1928, the previous high level of this record. Building construction gained steadily

from March 1, to September 1, and showed further improvement on November 1, but was comparatively brisk in every month. A mean index of 135.3 in 1929 compared favourably with that of 112.0 in the preceding year. The average number of persons employed by the reporting contractors was 51,851. As already mentioned in the case of logging, there is a growing tendency on the part of the larger contractors to sublet their contracts by trades to subcontractors, who usually employ a comparatively small number of workers. When they have less than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undobutedly considerably in excess of that covered in these statistics. *Road construction* reported many additions to staffs during the summer, when the number employed was higher than in any other year on record; in the Western provinces, the favourable weather conditions and an easy labour market, due to the smaller crop, facilitated work on an extensive program of highway construction and improvement. The payrolls registered averaged 25,328 workers, and ranged between 5,784 on April 1 and 51,867 at the beginning of August. In many districts, road work is supplementary to the occupations ordinarily followed by nearby residents, particularly agriculturists during slack periods on their farms. Employment in *railway construction,* (which the working forces covered averaged 45,059 men) did not attain so great a volume as in 1928, but with that exception, was brisker than in any other year of the record. The index averaged 114.4, while in 1928 the mean was 116.7 and in 1927, it was 101.6.

Services

Statements were received monthly from some 200 firms in this division, whose employees averaged 21,196. Gains were noted from January to September, succeeded by seasonal declines until the end of the year. Employment in hotels and restaurants was very active during 1929, partly as a result of the extensive tourist trade, while improvement was also shown in other divisions. The index number averaged 130.3, as against 118.1 in 1928; this was considerably better than in any other year of the record.

Trade

Employment in trade was decidedly more favourable than in previous years of the record, the index number being higher in each month of 1929 than in the corresponding month of any other of the last ten years. Both *retail* and *wholesale trading establishments* shared in the gains, which were fairly well distributed over the country. With one exception, there was uninterrupted expansion from March until the end of the year. The payrolls of the co-operating firms averaged 83,408 persons and the index 126.2, compared with 73,811 and 116.1, respectively, in 1928. Of these workers over 70 per cent were classified as employed in retail stores. In recent years, a growing tendency has been in evidence in this group for the larger stores and the chain organizations to absorb small businesses which would not otherwise have been represented in these statistics, but it is also true that a general and healthy growth has characterized trade; this is specially significant as an indication of the increased purchasing power and the greater prosperity of the Canadian consumer.

Tables Showing Employment by Industries

Table III gives the index numbers of employment by main industrial divisions since 1926, while the trend of employment during the years 1926-29 in some 60 industries is shown in Table IV. The columns headed "relative weight" indicate the proportion that the number of employees in the indicated industry is of the total number of employees reported in Canada by the firms making returns on June 1 and December 1 of the indicated years.

In connection with the construction of the new Canadian National Railway terminals at Montreal, which are said to constitute the greatest single building program in Canada, Sir Henry Thornton recently informed a delegation from the Building Trades Council that a clause requiring the contractor to pay the current standard wage for the different classes of labour employed would be inserted in all contracts and sub-contracts for the work. This provision is in keeping with the regular practice on the Canadian National Railways, the Fair Wage Clause being incorporated in all construction contracts.

A Royal Commission on the Civil Service was recently appointed in Great Britain, with instructions to inquire into the structure and organization of the Service, with special reference to the standard of remuneration, including the differential rates as between men and women; the machinery existing for the discussion of condition of employment; the question of retirement, especially the position of women who retire on marriage.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1929

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting in November was 7,197, their employees numbering 1,038,880 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,761, having an aggregate membership of 212,973 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of December, 1929, as Reported by Employers

The seasonal falling-off in employment recorded at the beginning of December was on a larger scale than in most of the last ten years; the small crop, the grain congestion, the shortage of power in British Columbia due to lack of rain, the feeling of caution in business resulting from the stock market depression, and the seasonal reaction from the unusually pronounced industrial activity indicated in recent months, combined to produce a contraction rather greater than the average; but in spite of this, employment was in greater volume than in the early winter of any previous year of the record. The 7,197 firms reporting to the Dominion Bureau of Statistics employed 1,038,880 persons on December 1, compared with 1,086,380 in the preceding month. Reflecting this decline of over four per cent, the index, based upon the 1926 average as 100, stood at 119·1, compared with 124·6 on November 1, 1929, and with 116·7, 108·1, 102·3, 96·5, 91·9, 96·9, 96·3 and 88·3 on December 1, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The most noteworthy losses were again indicated in construction and manufacturing, while very pronounced improvement was reported in logging and trade.

Employment by Economic Areas

All provinces registered curtailment, the largest recessions taking place in Ontario and the Prairie Provinces, as is customary at the time of year.

Maritime Provinces.—Large seasonal reductions were noted in the Maritime Provinces, chiefly in construction, but also in lumber mills and iron and steel plants, while logging, trade and shipping afforded greater employment. The payrolls of 554 co-operating employers totalled 76,649 workers, as against 84,220 workers on November 1. Smaller losses were reported on the same date in 1928, but the index was then much lower.

Quebec.—There was a falling-off in activity in Quebec, according to statements from 1,665 employers of 299,196 persons, or 11,087 less than in the preceding month. Manufacturing, construction and transportation showed declines, those in construction being particularly noteworthy; on the other hand, logging was decidedly busier and important improvement was also shown in trade. Less pronounced decreases were recorded on December 1, 1928, when employment was in smaller volume.

Ontario.—Employment in Ontario showed a considerable contraction; 11,914 workers were released from the staffs of the 3,230 firms whose statistics were received, and who had 437,678 on their payrolls. Retail trade and logging registered marked seasonal gains, and considerable improvement was also shown in the tobacco, telephone and metal mining groups. Transportation, construction and manufacturing, however, reported large losses, and smaller reductions were shown in quarrying, wholesale trade and services. The index

was over three points higher than in the same month in 1928, when curtailment was also reported.

Prairie Provinces.—Further pronounced declines were indicated in the Prairie Provinces on the date under review, when 12,518 persons were let out by the 1,015 reporting employers, who had 140,846 on their staffs. Logging, coal-mining, telephones and retail trade were much more active, while construction registered particularly pronounced reductions, and transportation and manufacturing were also slacker. The situation in these provinces has been greatly affected by the small harvest and the tie-up in the movement of grain, resulting in a lower level of employment than at the beginning of December, 1928, although activity was greater than in the early winter of all other years on record.

British Columbia.—Continued losses involving a larger number of workers than those noted on December 1, 1928, were shown in British Columbia, where 732 firms had 84,511 employees, as compared with 88,921 in their last report. Food factories and lumber mills were slacker, as were construction, transportation and logging; on the other hand, trade recorded more activity. The situation continued better than on the same date in any of the last ten years.

Table 1 gives index numbers by economic areas.

Employment by Cities

The eight centres for which separate tabulations are made showed lessened activity, the losses in Montreal being most noteworthy.

Montreal.—There was a reduction in the employment afforded by the 893 co-operating firms, whose staffs declined by 5,622 persons to 144,324 at the beginning of December. Manufacturing and construction reported a considerable falling-off, while retail establishments showed increased employment. Less extensive losses were noted on the same date in 1928, but the situation continued better than in the early winter of 1928, or of any other year since the record for this city was commenced in 1922.

Quebec.—Employment in Quebec City showed a decrease, 629 workers being laid off by the 121 employers whose returns were received and who had 12,854 employees on December 1. The largest contractions were in construction and manufacturing. Rather smaller declines were indicated on the same date in 1928, when the index was five points lower.

Toronto.—Continued decreases in personnel were reported in Toronto by 953 firms who employed 129,144 persons, as compared with 131,109 at the beginning of November. Trade showed noteworthy improvement, but manufacturing, construction, services, communications and transportation were slacker. Although gains had been registered on December 1, 1928, the volume of employment was then rather smaller.

Ottawa.—Curtailment was shown in this city, chiefly in manufactures and construction, while communications afforded more employment, largely due to a reorganization of divisional headquarters in the Bell Telephone Co.; 145 employers in Ottawa recorded a combined payroll fo 13,270 workers, as against 13,505 in their last report. Employment was more active than at the beginning of December, 1928, when larger losses had been indicated.

Hamilton.—Declines were reported in Hamilton, where an aggregate staff of 38,650 persons was employed by the 221 firms furnishing data, who had 39,177 employees on their November 1 forces. Construction was busier, but manufactures were decidedly slacker. The index many points higher than on the same date a year ago, when improvement was noted.

Windsor and the Adjacent Border Cities.—There was another large reduction in the Border Cities, mainly in manufacturing. Statements were tabulated from 135 employers with 15,393 workers, or 1,436 less than in the preceding month. Rather greater losses were indicated on December 1, 1928, but employment then was at a higher level as the automobile trades had been enjoying a period of very marked activity, which did not continue into the latter part of 1929.

Winnipeg.—Employment decreased in Winnipeg, according to data received from 337 firms employing 34,024 persons. Improvement was reported in trade and communications, while manufacturing, construction and transportation released employees. The index was slightly lower than on the same date in 1928, when practically no change from November had been noted.

Vancouver.—There was also a contraction in Vancouver, according to 286 employers of 29,524 workers, or 649 less than on November 1. Manufacturing and construction showed curtailment, but trade afforded more employment. A more extensive reduction had been recorded at the beginning of December, 1928, when the index was lower.

Index numbers by cities are given in Table II.

Manufacturing Industries

A substantial reduction in employment occurred in manufacturing establishments, 4,246 of which employed 541,315 operatives, compared with 562,275 on November 1. This decline exceeded that noted at the beginning of December, 1928, when the index was practically the same as on the date under review; on December 1 in all other years of record, it was lower. Iron and steel and lumber factories reported the greatest contractions, while smaller losses were noted in food, textiles and other groups.

Animal Products—Edible.—There were further seasonal declines in fish-canneries (mainly in the Maritime Provinces), and also in dairies. The result was a reduction of 815 in the staffs of the 201 firms making returns, who had 18,214 employees. This decrease involved about the same number of persons as

NOTE.—The "relative weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative Weight of Employment by Districts as at Dec. 1, 1929	100·0	7·4	28·8	42·1	13·6	8·1

that recorded on the same date in 1928, when employment was at a slightly higher level.

Leather and Products.—Following the favourable movement indicated during the last few months, employment in this industry showed a loss at the beginning of December, chiefly in boot and shoe factories. Statements were tabulated from 176 manufacturers, employing 16,675 persons, as compared with 16,897 on November 1. Greater losses had been noted on December 1, 1928, when the index was slightly lower than on the date under review.

Lumber and Products.—Seasonal curtailment of operations on a smaller scale than at the beginning of December, 1928, took place in saw-mills, while furniture, vehicle and match factories also reported reductions in payrolls. All provinces shared in the downward movement. Data were received from 699 firms in this industry, whose staffs declined from 54,327 workers on November 1,

NOTE.—The "relative weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

to 47,839 on December 1. The index was slightly lower than on the same date a year ago.

Plant Products—Edible.—Contractions in the different divisions of the vegetable food group produced a reduction of 2,107 employees in the 368 plants from which returns were received, and which reported a combined working force of 32,679 operatives. Fruit and vegetable canneries released help, owing to the completion of the season's work, and biscuit and confectionery factories were also slacker, while the sugar and syrup and the coffee and spice divisions recorded slight improvement. In the Prairie Provinces, activity increased, but elsewhere curtailment was indicated. The volume of employment on December 1, 1928, was smaller, although the losses then noted were rather less extensive.

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

Pulp and Paper.—Statements were received from 535 manufacturers in the pulp and paper industry, whose payrolls were reduced by 522 persons to 67,934 at the beginning of December. Employment continued brisker than on the same date in any other year of the record. Improvement took place in printing and publishing establishments, while pulp and paper works released some employees. Reductions in personnel were shown in all except the Western Provinces.

Textile Products.—There was a recession in employment in these industries, shared in by practically all divisions. Returns were compiled from 632 manufacturers employing 83,186 workers, or 1,049 less than in the

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=110)

[1] The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

preceding month. General curtailment was shown, that in Ontario being most noteworthy. There was a small gain at the beginning of December, 1928, when the index was a few points higher.

Tobacco, Distilled and Malt Liquors.—Employment in tobacco factories was rather more active, while other divisions of this group showed slight declines. An aggregate payroll of 16,718 persons was indicated by the 151 co-operating firms, compared with 16,681 at the beginning of November. Decreases in Quebec were offset by gains in Ontario. General improvement had been shown on the same date in 1928, when the index was, however, several points lower.

Clay, Glass and Stone Products.—Further seasonal losses occurred in brick and stone works, while glass plants were busier; 517 persons were released by the 146 co-operating manufacturers, who had 12,989 on their payrolls. Quebec and the Prairie Provinces recorded most of the shrinkage. Although a slightly upward tendency was in evidence on December 1, 1928, the volume of employment then was smaller.

Electric Current.—There was a reduction in employment in electric current plants, 94 of which reported 15,688 employees, or 238 less than in the preceding month. The recessions occurred mainly in Quebec. A larger number of workers was released at the beginning of December, 1928, when the index number was considerably lower.

Electrical Appliances.—Losses in payrolls were noted in electrical apparatus plants, mainly in Ontario; 51 manufacturers employed 16,508 persons, as compared with 16,707 in their last report. Employment on December 1, 1929, was at its maximum for this record at that date.

Iron and Steel Products.—Considerable curtailment was indicated in iron and steel factories, chiefly in the automobile and other vehicle and crude, rolled and forged division. There was a decrease of 7,819 in the staffs of the 684 co-operating manufacturers, who employed 143,137 workers. Employment declined in all provinces. The situation was not so favourable as on the same date in the preceding year, when a small gain had been indicated.

Non-Ferrous Metal Products.—There was a decline in employment in this division at the beginning of December, according to data received from 108 employers of 20,150 persons, as compared with 20,595 in the preceding month. A slightly downward movement was noted in all except the Prairie Provinces. The index was much higher than on December 1, 1928, when improvement had been registered.

Logging

Continued, pronounced advances were shown in logging, there being an increase in all provinces except British Columbia, with the largest gains in Quebec and Ontario. Statements were tabulated from 249 logging camps having 56,997 employees, or 11,136 more than in their last report This expansion brought the index number to the highest point so far reached in this record.

Mining

Coal.—Employment in coal mines increased moderately at the beginning of December, 185 persons being added to the payrolls of the 79 reporting operators, who had 29,776 employees. The Prairie Provinces reported most of the improvement. The seasonal gains on the corresponding date in 1928 were larger, but the index number then was practically the same as on December 1, 1929.

Metallic Ores.—For the ninth consecutive month, there was an increase in employment in metallic ore mines; 196 workers were added to the forces of the 78 employers from whom information was received and who had 17,894 persons on their pay lists. Curtailment had been indicated in December, 1928, when the number engaged in the industry was considerably smaller.

Non-Metallic Minerals other than Coal.—Continued declines in employment were noted in this industry, in which 71 firms furnished data, showing that they had reduced their staffs by 813 persons to 8,883 on the date under review. All provinces except British Columbia shared in this seasonal slackness. Conditions were better than in the same month of 1928, when the movement was also downward.

Communications

Increased activity was noted on telephones, while employment in the telegraphic division was slightly lower; 400 persons were added to the payrolls of the 167 co-operating companies and branches, which had 30,632 employees on the date under review; the index was decidedly higher than in the early winter of any other year of the record.

Transportation

Street Railways and Cartage.—Employment in this division was seasonally quiet in all provinces. Data were compiled from 141 firms whose staffs declined from 27,043 on November 1, to 26,140 at the beginning of December. Although this loss was rather more pronounced than that recorded on the same date in 1928, the index continued much higher than in the early winter of that, or of any other year since the record was instituted.

Steam Railways.—The trend of employment in railway operation was downward, 106 employers reporting 80,663 workers, as compared with 85,481 in the preceding month. The largest decrease was in the Prairie Provinces. The index number was lower than on December 1, 1928; the grain congestion of recent months has resulted in lowered employment in this group.

Shipping and Stevedoring.—Seasonal losses were registered in shipping, from which 513 persons were let out by the 75 co-operating employers, whose staffs aggregated 18,065. Improvement in the Maritime Provinces was offset by curtailment in Quebec, Ontario and British Columbia. Gains had been indicated on December 1, 1928, but the index then was a few points lower.

Construction and Maintenance

Buildings.—Employment in building construction showed a seasonal falling-off from the preceding month, although it was still at a higher level than in the early winter of previous years of the record, which was commenced in 1920. Statements were compiled from 719 contractors employing 59,164 persons, as compared with 68,125 on November 1. The most extensive curtailment was in Quebec and the Prairie Provinces, although there was a general recession throughout the Dominion.

Highways.—Further important decreases were noted in the staffs of the 252 highway contractors furnishing statistics, who employed 22,518 workers on December 1, as compared with 38,547 in the preceding month. Important declines were registered in all provinces. The number released was much greater than on December 1, 1928, but in spite of this, employment was in greater volume.

Railways.—Activity on railway construction and maintenance showed another seasonal decline which, however, involved fewer workers than that noted on the same date in 1928, but the index then was much higher than on December 1, 1929. Statistics were received from 45 contractors and divisional superintendents whose staffs diminished from 41,865 men on November 1, to 33,241 on the date under review. The most pronounced contractions were in Ontario and the Prairie Provinces, although there were general losses throughout the country.

Services

Further seasonal reductions were reported by the 230 co-operating firms in this division, who had 21,170 employees, or 1,058 less than in the preceding month. Hotels and restaurants continued to decrease their labour forces, and laundries were also slacker. Employment was more active than on December 1 in any earlier year of the record.

Trade

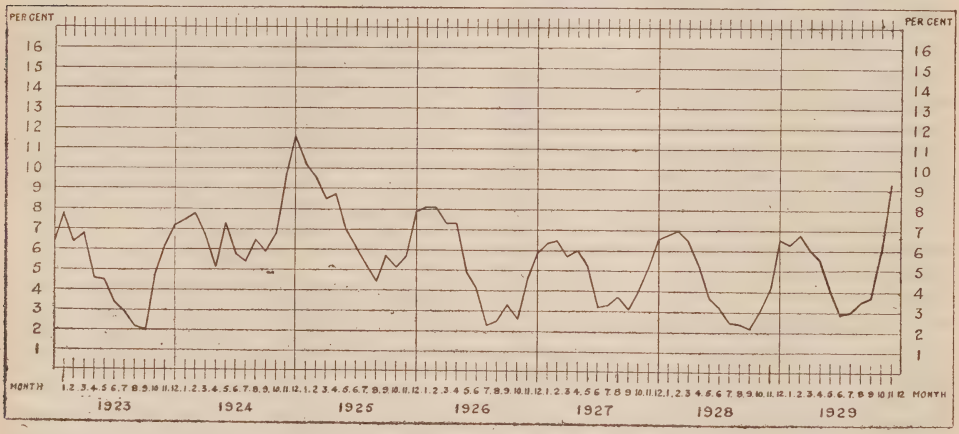
Large seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 739 trading establishments with 92,422 employees, or 3,262 more than on November 1. The index, standing at 135·4, was at its maximum for the last ten years; this index was particularly significant as an indication of the anticipated purchasing power of the people during the holiday season.

Index numbers of employment by economic areas leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of November 1929

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from our tabulation. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The grain congestion affecting employment for railway workers to a marked degree, to-



gether with exceptional quietness in the garment trades, particularly in the Province of Quebec, and the customary seasonal curtailment of building and construction activities throughout the country, all combined to make the situation for trade union members at the close of November less favourable than in either the preceding month or November, 1928. Reports for the month under review were tabulated from a total of 1,761 labour organizations with an aggregate membership of 212,973 persons, 19,832 of whom or a percentage of 9·3 were idle on the last day of the month contrasted with 6·0 per cent of unemployment in October and with 4·2 per cent in November, 1928. All provinces reflected a lower employment level during November than in either the previous month or November, 1928, Quebec unions showing reductions in both comparisons involving the greatest number of workers, attributable chiefly to slackness in the clothing industry of the province. From the Prairie Provinces noteworthy curtailment of activity was indicated when compared with November, 1928, the reduced grain movement during the month under review being largely responsible for the change.

A separate tabulation is made monthly showing the unemployment situation in the largest city in each province with the exception of Prince Edward Island. During November employment recessions were indicated in all cities used for comparative purposes both when contrasted with the returns for the previous month and November, 1928, the reductions in activity shown in Montreal being, especially heavy, due, as mentioned above, to dullness in the clothing trades. Halifax and Edmonton unions also reported noteworthy declines in available employment in both comparisons, while in Regina the change in comparison with November, 1928, was substantial, though slight variation in conditions only was shown when compared with October.

The chart which accompanies this article indicates the unemployment trend by months from January, 1923, to date. The curve during November continued in the upward trend of the previous month, indicative of a greater unemployment volume, attaining at the close of the month a level considerably above that indicated at the end of November, 1928.

In the manufacturing industries employment showed a further and larger decline dur-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

ing November, chiefly seasonal in character, the 497 unions from which reports were received with 59,977 members reporting 12·8 per cent of inactivity compared with 7·8 per cent in October. Large reductions in the volume of work afforded were shown in comparison with November, 1928, returns when 5·6 per cent of the members reported were idle. The determining factor in the adverse situation reported during November over both the preceding month and November, 1928, was the increased slackness shown in the Quebec garment trades with contributing declines, on a much smaller scale, among general labourers, iron, steel and leather workers. The trend of employment for wood workers was slightly lower than that shown in October, though considerable improvement was manifested over November, 1928, conditions. Among printing tradesmen, pulp and paper makers and textile workers, little change

occurred in all three months used for comparison.

From unions of coal miners 44 reports were tabulated during November embracing a membership of 17,044 persons, 407 of whom or a percentage of 2·4 were unemployed at the end of November compared with 1·9 per cent in October and with ·4 per cent in November, 1928. Employment for both Nova Scotia and Alberta union members eased off slightly from October, while in British Columbia no idle miners were reported in either month. When comparing with the returns for November, 1928, Alberta and Nova Scotia unions reported reductions in the employment volume of about 3 per cent and 2 per cent respectively during the month under review, while in British Columbia all members were reported at work compared with a fractional unemployment percentage in November, 1928.

Continued seasonal contractions on a somewhat larger scale were registered by unions in the building and construction trades during November the 223 organizations from which reports were tabulated with 32,462 members showing 16·3 per cent of inactivity compared with 10·4 per cent in October. The decrease in activity in comparison with October occurred chiefly among bricklayers, masons and plasterers and carpenters and joiners and employment recessions of minor importance were registered by electrical workers, plumbers and steamfitters, painters, decorators and paperhangers, and tile layers, lathers and roofers. On the other hand, bridge and structural iron workers, granite and stonecutters and hod carriers and building labourers reported a more favourable situation than in October. In comparison with the returns for November, 1928, when 9·3 per cent of unemployment was recorded bricklayers, masons and plasterers and carpenters and joiners as in the previous comparison reported the most outstanding curtailment of activity, while lesser reductions were shown by plumbers and steamfitters, bridge and structural iron workers, electrical workers, painters, decorators and paperhangers and tile layers, lathers and roofers. Some improvement in conditions, however, was reported by hod carriers and building labourers and granite and stone cutters.

Employment for unions in the transportation industries showed a slight falling off only when compared with October, though the situation was considerably less favourable than in November, 1928. Reports for the month under review were received from 753 organizations of transportation workers with 73,726 members, 7·0 per cent of whom were unemployed compared with 5·1 per cent in October and with 2·6 per cent in November, 1928. The small wheat yield, and hence the reduced grain movement, in consequence of which activity for steam railway workers was much curtailed, was largely responsible for the adverse situation reflected in the transportation industries as a whole. Among navigation workers who, however, form but a small share of the total membership in the transportation group a somewhat lower level of employment was maintained than in October, though the situation showed considerable improvement over November, 1928. Street and electric railway employees were slightly busier than in

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

October, but nominal reductions in activity were recorded in comparison with November, 1928. The same percentage of idle members was reported by teamsters and chauffeurs during November as in October, but unemployment showed a slight increase over the corresponding month in 1928.

A separate record is compiled each month of unemployment as affecting longshoremen. During November returns were received from 13 associations of these workers covering a membership of 7,197 persons, 1,628 of whom or 22·6 per cent were without employment contrasted with 15·3 per cent in October and with 16·5 per cent in November, 1928.

Retail clerks were much slacker during November than either the previous month or November, 1928, unemployment among Quebec union members accounting for the change. Returns for November were tabulated from 7 unions of retail clerks with 1,490 members, 10·2 per cent of whom were idle at the end of the month compared with percentages of ·1 in October and with ·7 in November, 1928.

Slightly less activity was indicated by civic employees during November both as compared with the preceding month and November, 1928, as shown by the returns received from 65 unions with 7,114 members. Of these 162 were idle at the end of the month, a percentage of 2·3 contrasted with 1·1 per cent of unemployment at the close of October and with 1·5 per cent in November, 1928.

In the miscellaneous group of trades a moderate increase in the volume of unemployment was apparent during November over the previous month, the 117 unions from which reports were tabulated with 6,394 members showing 6·2 per cent of idleness compared with 4·5 per cent in October. Hotel and restaurant employees reported the most noteworthy reductions in activity when compared with October and among theatre and stage employees and stationary engineers and firemen employment eased off slightly. In comparing with the returns for November, 1928, when 6·1 per cent of idleness was registered stationary engineers and firemen reported contractions in employment during the month under review which were practically offset by the improvement shown among hotel and restaurant, and theatre and stage employees and barbers.

Unemployment for fishermen increased to a considerable extent during November when compared with October, though conditions remained much the same as in November, 1928. During the month under review returns were received from 3 unions of these workers with 763 members, 19·7 per cent of whom were idle compared with 2·9 per cent in October and with 19·9 per cent in November, 1928.

Lumber workers and loggers with 4 unions reporting 1,200 members indicated 6·3 per cent of idleness compared with 1·9 per cent in October and with a fully engaged situation in November, 1928.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive and also the percentage of unemployment by provinces for November of each year from 1919 to 1926 inclusive and for each month from January, 1927, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for November, 1929

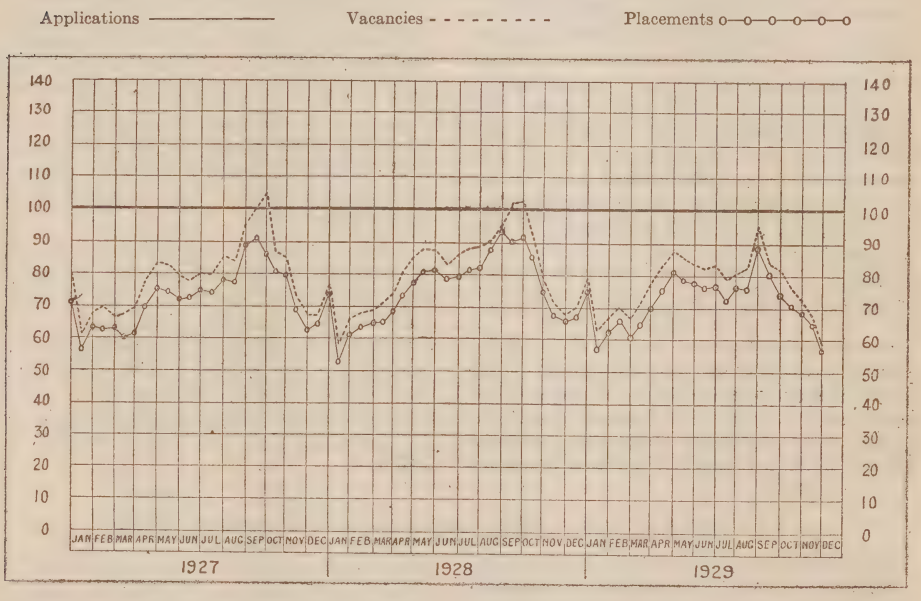
A decrease of 22 per cent in the volume of business transacted during the month of November, 1929, as compared with that of the previous month, was reported by the offices of the Employment Service of Canada. A decline of 5 per cent was also recorded when a comparison was made with the records of November, 1928. In the former instance all industrial divisions showed lessened activity, the largest declines being shown in services, construction and maintenance, logging and farming, while under the second comparison, logging showed a gain, all other groups showing declines.

The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve of vacancies and of placements in relation to applications declined sharply throughout the month, and at the close of the period under review the levels attained were about 9 points lower than those shown at the close of November, 1928. The ratio of vacancies to each 100 applications was 67·5 during the first half and 59·0 during the second half of November, 1929, in contrast with ratios of 71·9 and 68·1 during the corresponding periods of 1928. The ratios of placements to each 100 applications during the periods under review were 65·0 and 56·8 as compared with 67·8 and 65·7, respectively, during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the offices of the Ser-

vice throughout Canada during November, 1929, was 1,080 as compared with 1,427 during the preceding month, and with 1,147 in November a year ago.

The average number of applications for employment received daily by the offices of the Service during the month under review was 1,708 in comparison with 1,914 in October, 1929, and with 1,637 during November, 1928.



The average number of placements made daily by the offices of the Service during November, 1929, was 1,040 of which 643 were in regular employment and 397 in work of one week's duration or less, as compared with a total daily average of 1,336 during the preceding month. Placements in November a year ago averaged 1,093 daily, consisting of 683 placements in regular and 410 in casual employment.

During the month of November, 1929, the offices of the Service referred 27,417 persons to vacancies and effected a total of 25,976 placements. Of these, placements in regular employment were 16,053 of which 12,425 were of men and 3,628 of women, while placements in casual work totalled 9,923. The number of vacancies reported by employers was 18,394 for men and 8,590 for women, a total of 26,984, while applications for work numbered 42,685 of which 30,079 were from men and 12,606 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

NOVA SCOTIA

There was a decline of 23 per cent in the number of positions offered through offices in Nova Scotia during November, 1929, when a comparison was made with the preceding month, but a gain of over 11 per cent was recorded when the figures were compared with those of November, 1928. Placements also showed a decrease of more than 26 per cent from October, but an increase of 16 per cent over those of the corresponding month a year ago. Construction and maintenance, services and trade showed gains under the latter comparison, while logging registered the greatest decline. Changes in other groups

were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 47; construction and maintenance, 82; trade, 89 and services, 388, of which 289 were of household workers. Regular employment was found for 98 men and 62 women.

NEW BRUNSWICK

During the month of November, 1929, positions offered through New Brunswick offices showed a gain of 4 per cent over the preceding month, but a decline of 15 per cent in comparison with November, 1928. Placements showed practically no change from October, but a loss of 14 per cent over those of November a year ago. All groups except logging, manufacturing and fishing reported declines, the largest being in construction and maintenance, while of the gains registered, that in logging was the highest. Placements by industrial divisions included: logging, 124; fishing, 33; and services, 562, of which 411 were of household workers. Placements for men in regular work numbered 171 and for women 49.

QUEBEC

There was a decrease of 22 per cent in opportunities for employment offered by Quebec offices during November, 1929, when compared with the preceding month, but an increase of nearly 6 per cent over the vacancies offered during the corresponding month a year ago. Placements showed losses of nearly 29 per cent and 11 per cent, respectively, in the comparison with October, 1929, and with November, 1928. Declines under the latter review were shown in all groups except manufacturing, logging, farming and mining, the largest decrease occurring in construction and maintenance and the highest gain in logging. Changes in other groups were nominal only. Industrial groups in which employment was found for over 100 workers included: manufacturing, 120; logging, 1,057; construction and maintenance, 327 and services, 592, of which 385 were household workers. During the month 1,697 men and 472 women were placed in regular employment.

ONTARIO

Orders listed in employment offices in the Province of Ontario during November, 1929, called for 30 per cent fewer workers than in October, but over 3 per cent more than were recorded during November a year ago. Placements also showed declines of 29 per cent and of nearly 5 per cent in the above comparisons. Declines in placements from November, 1928, the largest of which was recorded in manufacturing, were shown in all groups except logging, which did not register sufficient gain to counteract the losses recorded in other divisions. Industrial groups in which most of the placements were effected were: manufacturing, 1,510; logging, 2,537; farming, 419; transportation, 507; construction and maintenance, 2,106; trade, 501, and services, 3,727, of which 2,378 were of household workers. Regular employment was found for 5,543 men and 1,509 women.

MANITOBA

Opportunities for employment as indicated by orders listed at employment offices in Manitoba during November, 1929, were nearly 21 per cent lower than during the preceding month and almost 7 per cent less than in November, 1928. There was also a decline of 21 per cent in the placements for the month under review in comparison with October, but a gain of 41 per cent was shown over those of November a year ago. This increase was almost entirely accounted for by a substantial gain in logging, with minor increases only reported in trade and communication. All other divisions reported decreased activity, that in services being the most pronounced. Placements by industrial groups included: manufacturing, 92; logging, 2,008; farming, 422; construction and maintenance, 97; trade, 190, and services, 1,706, of which 1,534 were of household workers. Placements in regular work numbered 2,532 for men and 477 for women.

SASKATCHEWAN

The number of positions offered through employment offices in Saskatchewan during November, 1929, was nearly 47 per cent less than in the preceding month and over 28 per cent below that of the corresponding month a year ago. Placements declined almost 32 per cent when compared with October and more than 30 per cent when compared with November, 1928. All groups registered reduced placements from those recorded during the corresponding month a year ago, the most marked declines being in logging, farming and services. Industrial divisions in which the largest number of positions were filled were: transportation, 102; construction and maintenance, 186; trade, 146, and services, 913, of which 614 were of household workers. During the month under review 499 men and 402 women obtained regular employment.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during November, 1929, were nearly 35

per cent less than in October and 27 per cent below those of November, 1928. Placements also showed the same decline in comparison with the preceding month, and were about 24 per cent below those of the corresponding month a year ago. Under the latter comparison, transportation and finance were the only groups to show gains and these were nominal only. Logging showed the largest decline, all other groups except those mentioned above showing decreased activity though in a lesser degree. The majority of placements recorded during the month occurred in the following industrial groups:—manufacturing, 137; logging, 144; farming, 525; transportation, 103; construction and maintenance, 339; mining, 94; trade, 85, and services, 834, of which 621 were of household workers, regular employment being found for 1,136 men and 352 women.

British Columbia

British Columbia orders during November, 1929, called for almost 32 per cent fewer workers than in the preceding month and over 14 per cent less than in the corresponding month a year ago. Placements were 30 per cent below those of October and more than 12 per cent lower than in November, 1928. In the latter comparison, trade and construction and maintenance showed gains, while logging registered the largest decline. Lesser declines also occurred in manufacturing, farming, mining, transportation and services. Placements by industrial divisions included: manufacturing, 248; logging, 367; farming, 71; transportation, 89; construction and maintenance, 279; trade, 190, and services, 857, of which 527 were household workers. During the month 749 men and 305 women secured positions in regular employment.

Movement of Labour

During the month of November, 1929, the offices of the Employment Service of Canada made 16,053 placements in regular employment, of which 9,325 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,873 were granted the Employment Service reduced transportation rate, 1,428 going to points within the same province as the despatching office and 1,445 to other provinces. The reduced transportation rate, which is 2·7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Quebec offices granted 195 certificates for reduced transportation during November, 33 of which were provincial and 162 interprovincial. Of the former, 17 were issued at Quebec City to 14 bushmen and 3 cooks going to points within the same zone, while Montreal granted 16 to bushmen proceeding to employment within its own zone. The movement outside the province originated in Hull, and was entirely of bushmen, 120 of whom travelled to Pembroke, 23 to Sudbury and 19 to Cobalt.

Persons benefiting by the Employment Service reduced transportation rate from Ontario centres during November were 1,120 in number, 1,090 of whom went to employment within the province and the remainder to other provinces. Provincially, 1,056 of the transfers were of bush workers, over 700 of whom went to employment within the Timmins zone, and around 200 to Port Arthur and vicinity. A number of offices were instrumental in the transfer of these workers. The Port Arthur zone was also the destination of 2 welders and 1 quarry foreman who were transported from Toronto. In addition, the Toronto office despatched 1 accountant to North Bay and 1 cook and 1 cookee to Kingston. The balance of the provincial transfers included 4 jute workers going from Chatham to Kitchener, 5 carpenters from Cobalt to Sudbury, 1 boilermaker from North Bay to Brantford, 13 rockmen from Sudbury to Sault Ste. Marie, and 5 bricklayers from Windsor to North Bay. For points outside the province, the Pembroke office effected transfers of 15 bushmen to Hull, 10 bridge builders to Three Rivers and 2 construction fitters to Rouyn. The Rouyn zone also received 2 mine carpenters from North Bay. The 1 remaining transfer was of a granite cutter who was conveyed at the special rate from Windsor to Montreal.

Business transacted by Manitoba offices during November involved an issue of 1,348 certificates for reduced transportation, 111 of which were for provincial centres and 1,237 for points in other provinces. Included in the provincial movement from Winnipeg were 3 farm hands, 5 farm generals, 3 domestics, 1 hotel general and 1 dietitian going to Brandon, 1 farm hand and 1 waitress to Dauphin and 67 farm hands, 1 farm general, 3 cooks, 2 bushmen, 1 handyman, 1 fisherman, 1 pipe fitter and 2 hotel workers to employment within the Winnipeg zone. In addition, 18 bushmen journeyed from Dauphin to centres within the same zone. Of the workers transferred outside the province, 1,021 were sent to Port Arthur and surrounding territory, includ-

ing 993 bushmen, 5 teamsters, 4 farm hands, 3 fishermen, 3 cookees, 3 blacksmiths, 6 cooks, 2 hotel employees, 1 handyman and 1 saw filer. All of these secured their certificates for reduced transportation at Winnipeg. From Winnipeg also, 178 bushmen were transported to Timmins, 9 to Sault Ste. Marie and 2 to Sudbury. Saskatchewan centres received 24 workers transferred from Winnipeg, 7 farm hands and 4 farm housekeepers going to the Regina zone, 8 farm hands to Estevan, 2 carpenters to North Battleford, 1 cook and 1 farm hand to Yorkton and 1 waitress to Prince Albert, while to Alberta points Winnipeg despatched 2 farm hands for work in the Drumheller zone and 1 farm domestic to Calgary.

Transfers at the special rate from Saskatchewan centres during November totalled 90, of which 81 were provincial and 9 interprovincial. Travelling within the province from Saskatoon were 16 bushmen and 2 farm hands going to Prince Albert, 4 farm hands and 1 hotel cook within the Saskatoon zone and 1 farm housekeeper to North Battleford, while from Regina 5 bushmen and 1 farm hand went to Prince Albert, 5 farm hands to Regina, 1 teamster to Moose Jaw, 1 housekeeper to Yorkton and 1 farm hand to Estevan. For points within its own zone Prince Albert despatched 36 bushmen. The remaining provincial transfers were from Moose Jaw, from which centre 2 teamsters and 1 baker were conveyed to Prince Albert, 1 farm hand each to the Regina and Saskatoon zones, and 2 farm hands within the Moose Jaw zone. Of the persons transferred outside the province 6 were bushmen for the Port Arthur zone, 3 of whom travelled from Moose Jaw and 3 from Regina. In addition, the Regina office despatched 1 bushman to Dauphin, 1 hotel cook to Calgary and 1 hotel domestic to Toronto.

Offices in Alberta transferred 54 workers at the special reduced rate during November, 49 to employment within the province and 5 to outside centres. Provincially the Edmonton office granted certificates to 1 miner travelling to Drumheller and to 18 bush workers, 5 farm hands, 2 miners, 3 hotel workers, 2 cookees, 2 teamsters, 1 engineer, 1 carpenter, 1 dish washer and 1 fisherman going to employment within the Edmonton zone. From Calgary 2 waitresses and 1 farm hand went to Lethbridge, 1 farm hand and 1 farm domestic to Drumheller, 1 bushman and 1 farm hand to Edmonton, 2 carpenters to Medicine Hat and 3 farm hands within the Calgary zone. The interprovincial movement was of farm labour, Edmonton transferring 2 farm hands to Saskatoon and 1 to North Battleford, and Calgary 1 farm hand and 1 farm domestic to Cranbrook.

Of the 66 special transportation certificates granted by offices in British Columbia, 64 were issued to provincial points and the balance to other provinces. The latter were granted to 1 farm hand and 1 farm housekeeper proceeding from Vancouver to Edmonton. Provincially, the movement from Vancouver comprised the transfer of 13 railroad construction workers to Nelson, 1 cook to Revelstoke, 1 baker to Cranbrook, 1 tractor driver to Penticton, 1 teamster to Kamloops, 1 farm housekeeper to Kelowna, and 11 bush workers, 3 tunnel construction workers and 1 waitress to employment within the Vancouver zone. In addition, from Nelson 13 bush workers and 5 mine workers were conveyed to Cranbrook, while from Prince George 13 bush workers travelled to centres within the same zone.

Workers who took advantage of the Employment Service reduced transportation rate during November, numbered 2,873 and of these 1,965 were carried by the Canadian National Railways, 791 by the Canadian Pacific Railway, 112 by the Temiskaming and Northern Ontario Railway and 5 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During November, 1929

The aggregate value of the construction represented by the building permits issued by 61 cities during November was $16,166,385. This was a seasonal decline of $1,897,192 or 10·5 per cent as compared with the October total of $18,063,577, but an increase of $335,549 or 2·1 per cent in the more significant comparison with the November, 1928, figure of $15,830,836. The total for November, 1929, was greater than in the same month of any other year for which statistics for the 61 cities are available, while the cumulative value for the elapsed eleven months of 1929 exceeds by over $17,000,000 that for the same months in 1928, the previous high level of this ten years' record.

Some 50 cities furnished detailed statistics, showing that they had issued more than 900 permits for dwellings estimated to cost nearly $5,000,000 and about 2,500 permits for other buildings estimated at almost $10,500,000. During October, authority was granted for the erection of about 1,200 dwellings and 3,300 other buildings, estimated to cost approximately $6,000,000 and $11,000,000, respectively.

Nova Scotia, New Brunswick, Ontario and British Columbia reported increases in the value of the building permits issued as compared with October, that of $969,981 or 11·3 per cent in Ontario being largest. Of the reductions in the remaining provinces, that of $2,119,871 or 38·5 per cent in Quebec was most pronounced.

As compared with November, 1928, Nova Scotia, New Brunswick, Ontario, Manitoba and Saskatchewan reported increases, that of $1,197,458 or 16 per cent in Ontario being most noteworthy. The greatest decline in this comparison was that of $736,676 or 27·7 per cent in British Columbia.

Of the four largest centres, Montreal recorded a decline in the value of building authorized in November, as compared with the preceding month and also as compared with November of a year ago. In Toronto, there were important gains in both comparisons; Winnipeg reported a decrease as compared with October, 1929, but the total exceeded that for November, 1928, while in Vancouver the aggregate was greater than in the preceding month, but smaller than in November of last year. Of the other centres, Halifax, New Glasgow, Sydney, Saint John, Chatham, Hamilton, Niagara Falls, Brandon, Moose Jaw, Prince Rupert and North Vancouver reported higher building authorizations than in either comparison.

Cumulative Record for First Eleven Months, 1929.—The following table shows the value of the building authorized by 61 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The January-November index numbers of the wholesale prices of building materials in these years are also given (average 1926=100).

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued, first eleven months (1920=100)	Average indexes of wholesale prices of building materials in first eleven months (1926 average=100)
	$	$		
1929	16,166,385	220,152,532	196·3	99·5
1928	15,830,836	203,010,555	181·0	98·0
1927	12,857,622	172,858,176	154·1	96·7
1926	9,975,451	144,877,789	129·2	100·2
1925	7,988,765	117,665,590	104·9	103·8
1924	10,212,908	120,119,829	107·1	107·2
1923	8,228,206	126,547,365	112·8	111·7
1922	11,182,030	138,698,005	123·6	108·6
1921	12,192,414	111,257,084	99·2	123·9
1920	5,627,949	112,175,268	100·0	153·4

The aggregate for the first eleven months of this year was 8·4 per cent greater than in 1928, the previous high level of the record,

[1] Includes Point Grey and South Vancouver, formerly given separately.

while the average index numbers of wholesale prices of building materials continue lower than in most of the years since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in October and November, 1929, and November, 1928. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during November is reproduced below. The following report on employment conditions in the United States is based on the information contained in the *Monthly Labour Review,* published by the United States Department of Labour, each issue containing statistics showing the trend of employment in selected manufacturing industries throughout the country during the second month prior to the date of publication. The statement contained in the December issue relates to the situation existing in October, 1929. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 23 representative cities. Summary figures for October and previous months taken from the December, 1929, issue of the *American Federationist,* the official publication of the organization, are reproduced below.

Great Britain

There was a further increase in unemployment during November, due largely to seasonal causes. The greater part of the increase occurred in the building industry, public works contracting, brick, tile, artificial stone and cement manufacture, mining industries other than coal mining and slate quarrying, constructional engineering, the clothing trades, road transport, shipping, and dock and harbour services. There was also some decline in employment in the pottery, iron and steel, coton, silk and artificial silk, jute, lace, and rubber industries. There was, however, some improvement in coal mining, coke oven and by-product works, glass bottle manufacture, shipbuilding and ship-repairing, textile bleaching, dyeing and finishing, and in the motor vehicle industry.

Among workpeople, numbering approximately 12,100,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at November 25, 1929, (including those temporarily stopped as well as those wholly unemployed), was 11·0 per cent, as compared with 10·4 at October 21, 1929, and with 12·1 at November 26, 1928. For males alone the percentage at November 25, 1929, was 12·1, and for females, 7·9 at October 21, 1929, the percentages were 11·5 and 7·5. The percentage wholly unemployed at November 25, 1929, was 8·8, as compared with 8·2 at October 21. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at November 25, 1929, was approximately 1,323,000, of whom 1,018,000 were men and 241,000 were women, the remainder being boys and girls. At October 28, 1929, it was 1,270,000, of whom 978,000 were men and 225,000 were women; and at November 26, 1928, it was 1,439,000, of whom 1,131,000 were men and 235,000 were women.

United States

Employment in the United States decreased 1·2 per cent in October, 1929, as compared with September, and pay-roll totals increased 0·4 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of August and September, 1929, and therefore cannot be included in the general statement for the month of September. The number of employees in Class I railroads as at September 15 totalled 1,730,840, representing a decrease of 0·7 per cent since August 15. The amount of pay-roll in the entire

month of September was $239,975,829, representing a decrease over the previous month of 4·8 per cent.

Employment in manufacturing industries decreased 1 per cent in October as compared with September, and pay-roll totals decreased 0·3 per cent.

October usually shows a small increase in employment, but in 1929 decreases of over 10 per cent and of 7 per cent in the automobile and the automobile-tire industries, respectively, more than overcame the small net increase in the 52 remaining industries. Pay-roll totals usually show a greater increase in October than employment, this increase being largely a recovery from the effect of Labour Day closing in September, the decrease in October, 1929, in pay-rolls totals was therefore considerably less than the decrease in employment.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for October, 1929, is 98·3 as compared with 99·3 for September, 1929, and 95·9 for October, 1928; the weighted index of pay-roll totals for October, 1929, is 102·3, as compared with 102·6 for September, 1929, and 99 for October, 1928. The monthly average, 1926, equals 100.

Increased employment in October as compared with September was shown in the food, chemical, textile, tobacco, paper, and non-ferrous metal group of industries. The vehicle group showed a decrease of 5·2 per cent, while the remaining 5 groups showed decreases ranging from 2·0 per cent in the lumber group to 0·2 per cent in the leather group.

The cotton goods industry gained 0·8 per cent in employment in October, the iron and steel industry decreased 2·5 per cent, foundries decreased 0·9 per cent, petroleum refining gained 0·4 per cent, and glass, cigars, and shipbuilding also reported small gains; the electric machinery industry fell off 0·6 per cent in October thereby ending a series of monthly increases which began in July, 1928.

Employment in rayon plants increased 2·9 per cent in October, and radio plants gained 7·8 per cent.

The October-September comparison is based upon reports from 12,762 establishments (exclusive of rayon and radio establishments) in 54 of the chief manufacturing industries of the United States. These establishments had in October 3,524,647 employees whose earnings in one week were $97,472,746.

Unemployment percentage.—Unemployment statistics collected by the American Federation of Labour and appearing each month in the *American Federationist,* the official publication of the organization, indicate the percentage of unemployed union members in twenty-three representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; 11 per cent.

BUILDING PERMITS IN THE UNITED STATES IN 1928

THE United States Department of Labour recently published in its Miscellaneous Series Bulletin No. 500 on "Building Permits in the Principal Cities of the United States in 1928." In the 310 cities for which reports were received for the year permits were issued for 385,429 buildings. Of this number, 181,989 buildings, or 47·2 per cent, were for residential purposes and 203,440, or 52·8 per cent, for non-residential use. The total estimated expenditure for new buildings in these 310 cities was $3,098,940,040 of which $1,913,720,710 or 61·8 per cent, was for residential buildings and $1,185,219,330, or 38·2 per cent, for non-residential buildings.

The Bureau of Labour Statistics has been collecting figures concerning building permits issued for every year since 1920, and in each of these years up to 1928, 1-family dwellings accounted for the greatest expenditure of any kind of buildings. In 1928, however, the permits issued for multi-family dwellings (apartment houses) show a larger estimated expenditure than those issued for 1-family dwellings. The estimated cost of the apartment houses for which permits were issued in these 310 cities during 1928 was $776,520,458, or 25·1 per cent of the expenditure for all new buildings, as compared with $715,317,535 or 23·1 per cent, for 1-family dwellings.

There were 164,268 families accommodated in the new 1-family dwellings for which permits were issued in 1927 in these 302 cities. This is 39·2 per cent of the total number of families provided for during that year. In 1928, 1-family dwellings provided for 143,889 families, which was 36·1 per cent of the total number of families supplied with new dwell-

ing places. In contrast, the number of families provided for in apartment houses increased from 179,177 in 1927 to 190,282 in 1928. In 1927, 42·8 per cent of the total number of family dwelling places for which permits were issued were in apartment houses, while in 1928 this percentage had risen to 47.8. The percentage of families supplied with residences in new 2-family dwellings decreased from 12 in 1927 to 10 in 1928.

In the non-residential group, office buildings accounted for the largest expenditure of money, $256,101,159 being expended for this class of structure. Stores and warehouses rated next in expenditures in this group, followed by factories, and schools and libraries in order. Private garages which comprise 40·6 per cent of the number of new buildings account for only 1·8 per cent of the cost.

In the 310 cities which reported for 1928 permits were issued for 279,020 repairs to old buildings. The cost of these repairs was estimated at $324,644,421. In 1927 permits were issued for 288,824 repairs at an estimated cost of $353,398,271.

The total estimated expenditure for the 664,449 building operations (including new buildings and repairs to old buildings) for which permits were issued in 1928, was $3,423,584,461. In 1927 permits were issued for 729,685 building operations at an estimated expenditure of $3,593,839,405.

FAIR WAGES CONDITIONS IN WATER-POWER DEVELOPMENT

Order in Council Governing Licences in the Prairie Provinces and N.W. Territories

AN Order in Council was adopted on December 3, 1929, providing for the insertion in the regulations governing licences for water-power rights in the Provinces of Manitoba, Saskatchewan and Alberta and the Northwest Territories of conditions for the protection of the labour employed in the construction, alteration, extension, maintenance and operation of these works. The conditions in question are similar in terms to those which apply to contracts for the construction of Dominion public buildings and other works.

An Order in Council was adopted on September 10, 1928, (LABOUR GAZETTE, February, 1929, page 117), declaring that all licences for Dominion water-power rights in Manitoba, Saskatchewan, Alberta and the Northwest Territories should be deemed to be executed on the condition that the licensee or his representative should pay wages not less than those generally accepted as current for similar services for similar undertakings in the locality, and maintain conditions of labour not less favourable than those prevailing in similar undertakings in the locality. This last mentioned clause is now rescinded in favour of more comprehensive conditions on lines similar to those which apply on Dominion works of construction.

The new conditions require the payment of the rates of wages generally accepted as current from time to time during the continuance of the licence for competent workmen in the district in which the work is being performed for the character or class of contract in which the workers are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates. The hours of work are to be those customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for some other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. Authority is given to the Minister of Labour to determine for the purposes of the licence what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours.

The fair wages clause of the water-power regulations, and any decision of the Minister of Labour made thereunder, are to be posted in a conspicuous place on the premises where work is being executed. Proper books and records are to be kept showing the names, trades and addresses of the workmen employed and the wages paid to each. These records are to be open for inspection by the Fair Wages Officers of the Government.

A condition is inserted to the effect that the contractors and subcontractors are to be bound in all cases to conform to the conditions of the licence and that the licencee shall be held responsible for strict adherence to all the contract conditions.

Preference is to be given to the employment of Canadian labour in all cases.

The text of the Order in Council follows:—

P.C. 2567

PRIVY COUNCIL, CANADA

AT THE GOVERNMENT HOUSE AT OTTAWA

TUESDAY, the 3rd day of December, 1929.

HIS EXCELLENCY THE ADMINISTRATOR IN COUNCIL:

His Excellency the Administrator in Council, on the recommendation of the Minister of the Interior, is pleased to order as follows:

Section 83A of the Regulations governing the mode of granting and administering Dominion water-power rights, as established by Order in Council P.C. 1666 of the 10th of September, 1928, is hereby rescinded and the following is substituted in lieu thereof:—

Every licence shall be deemed to be executed on the express condition that all mechanics, labourers, or other persons who perform labour in the construction, alteration, extension, maintenance and operation of the works authorized by such licence, shall be paid not less than such rates of wages as are generally accepted as current from time to time during the continuance of the licence for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for some other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of the licence, what are the current or fair and reasonable rates of wages, and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the licencee shall adjust the wages and hours and classification of work so as to give effect to such decision.

The foregoing Fair Wages Clause, also any decision of the Minister of Labour made thereunder, shall be posted and kept posted in a conspicuous place on the premises where the works authorized by such licence are being executed, occupied or frequented by the workmen.

Proper books and records shall be kept showing the names, trades, and addresses of all workmen employed, and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wages Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that contractors and sub-contractors shall be bound in all cases to conform to the conditions of the licence, and the licencee shall be held responsible for strict adherence to all contract conditions on the part of contractors and sub-contractors.

All workmen employed upon the work comprehended in and to be executed pursuant to the said licence, shall be residents of Canada, unless the Minister of Labour is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortifications, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wages clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in

Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which

would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Wilkie, Sask. Name of contractors, Fred and John Shoquist, Saskatoon, Sask. Date of contract, November 15, 1929. Amount of contract, $38,335. A fair wage schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours
	Per hour	Per day
Bricklayers and masons	$1 45	8
Carpenters and joiners	0 90	9
Concrete finishers	1 00	9
Concrete mixers	0 45	10
Electricians	0 85	9
Electricians' helpers	0 50	9
Labourers	0 40	10
Lathers—Metal	8c. sq. yd.	10
	hour	
Hollow tile setters	1 45	8
Marble and tile setters' helpers	0 50	8
Painters and glaziers	0 80	9
Plasterers	1 25	8
Plasterers' helpers	0 60	8
Plumbers and steamfitters	1 25	8
Plumbers and steamfitters' helpers	0 50	8
Roofers—Tar and gravel	0 85	9
Sheet metal workers	1 00	9
Sheet metal workers' helpers	0 60	9
Steam and operating engineers	0 75	9
Structural steel workers—Erectors	0 90	8
Structural steel workers—Rivetters	0 90	8
Teamsters with team and wagon	0 80	10
Terrazzo layers	0 75	9
Terrazzo layers' helpers	0 50	9
Truck drivers	0 50	10
Truck drivers with truck	2 00	10

Construction of fishermen's floats at Prince Rupert, B.C. Name of contractors, John and Charles J. Currie, Prince Rupert, B.C. Date of contract, November 25, 1929. Amount of contract, approximately, $14,679.30. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages Not less than	Hours per day
	Per day	
Piledriver foreman	$10 00	8
Piledriver engineer	9 00	8
Piledriver man	8 00	8
Piledriver boomman	8 00	8
Bridgeman	8 00	8
Derrickman	8 00	8
Fireman	5 50	8
Labourers	4 00	8
Carpenters	8 00	8

Construction of a wharf at Delisle (St. Coeur de Marie), County of Lake St. John, Que. Names of contractors, Alfred Cauchon, Albert Charest, George Jajoie and E. Rochette, all of LaMalbaie, P.Q. Date of contract, December 4, 1929. Amount of contract, approximately, $6,512.30. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Foreman	$0 60	10
Carpenters	0 45	10
Blacksmiths	0 50	10
Blacksmiths' helpers	0 35	10
Labourers	0 30	10
Carters	0 45	10
Teamsters	0 60	10

Construction of a wharf at Grand Anse (St. Maurice de l'Echourie), Gaspe Co., P.Q. Names of contractors, Dumont and Damours, Riviere du Loup, P.Q. Date of contract, November 30, 1929. Amount of contract, approximately $41,044. The General Fair Wages Clause was inserted in the contract.

Wharf replacement at Johnson's Landing, West Kootenay District, B.C. Name of contractor, Wm. English, Kaslo, B.C. Date of contract, December 19, 1929. Amount of contract, approximately $5,776.31. The General Fair Wages Clause was inserted in the contract.

Construction of a breakwater at Petit Cap, Gaspe Co., P.Q. Name of contractor, Charles H. Nadeau, Port Daniel West, P.Q. Date of contract, December 3, 1929. Amount of contract, approximately $32,014. The General Fair Wages Clause was inserted in the contract.

Construction of a wharf at Bradore Bay, Saguenay Co., P.Q. Name of contractor, Louis T. Blais, Quebec, P.Q. Date of contract, December 19, 1929. Amount of contract, approximately $60,334. The General Fair Wages Clause was inserted in the contract.

Construction of improvement to protection walls at Montmagny, P.Q. Name of contractor, Philippe Tetu, Montmagny, P.Q. Date of contract, December 14, 1929. Amount of contract, approximately $15,760. The General Fair Wages Clause was inserted in the contract.

Construction of a protection wall at Rivière St. Jean, Saguenay Co., P.Q. Name of contractor, Joseph Gagnon, Bersimis, P.Q. Date of contract, November 20, 1929. Amount of contract, approximately $9,667. The General Fair Wages Clause was inserted in the contract.

Construction of a breakwater at Anse au Griffon, Gaspé Co., P.Q. Name of contractors, Lewis and Alfred Maloney, Barachois West, P.Q. Date of contract, December 7, 1929. Amount of contract, approximately $44,727.60. The General Fair Wages Clause was inserted in the contract.

Construction of an extension to wharf at Riviere au Renard, Gaspe Co., P.Q. Name of contractors, Dumont & Damours, Rivière du Loup, P.Q. Date of contract, November 30, 1929. Amount of contract, approximately $49,000. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at St. Rose, P.Q. Name of contractors, Edward and Raymond Brunet, Ottawa, Ont. Date of contract, December 9, 1929. Amount of contract, $16,250 and unit prices. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Exeter, Ont. Name of contractors, Edwin and Harry Beaver, Crediton, Ont. Date of contract, November 15, 1929. Amount of contract, $17,200 and unit prices. The General Fair Wages Clause was inserted in the contract.

Construction of a breakwater at White Head (Gull Cove), Charlotte Co., N.B. Name of contractor, A. Douglas Dyas, St. Stephen, N.B. Date of contract, December 5, 1929. Amount of contract, approximately $12,530. The General Fair Wages Clause was inserted in the contract.

Supply and installation of an air conditioning system in the National Research Council Laboratory, Ottawa, Ont. Name of contractors, The Canadian Blower & Forge Co., Ltd., Kitchener, Ont. Date of contract, November 23, 1929. Amount of contract, $19,115. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at Toronto, Ont. Name of contractors, P. Lyall & Sons Construction Co., Ltd., Montreal, P.Q. Date of contract, October 24, 1929. Amount of contract, $2,057,000 and unit prices.

Construction of the superstructure of the International Bridge over the St. John River, between Clair, N.B., and Fort Kent, State of Maine. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, November 9, 1929. Amount of contract, approximately $96,968. The General Fair Wages Clause was inserted in the contract.

Supply and installation of two coal pulverizing and burning equipment and boiler settings at the Government Central Heating Plant, Ottawa, Ont. Name of contractors, The John Inglis Co., Ltd., Toronto, Ont. Date of contract, December 9, 1929. Amount of contract, $37,930. The General Fair Wages Clause was inserted in the contract.

Renovation and repairs to Bellevue Building and Annex, Halifax, N.S. Name of contractors, Standard Construction Co., Ltd., Halifax, N.S. Date of contract, December 2, 1929. Amount of contract, $8,944. The General Fair Wages Clause was inserted in the contract.

Construction of superstructure of new greenhouse at Ste. Anne Hospital, Ste. Anne de Bellevue, P.Q. Name of contractors, King Construction Co., Ltd., Toronto, Ont. Date of contract, August 30, 1929. Amount of contract, $2,440. The General Fair Wages Clause was inserted in the contract.

Dredging in Lake St. Louis, Quebec. Name of contractors, St. Lawrence & Great Lakes Dredging and Construction Co., Ltd., Mont-

real, P.Q. Date of contract, December 26, 1929. Amount of contract, approximately $23,057.45. The General Fair Wages Clause was inserted in the contract.

Contract in Group "B" (Interior Fittings, etc.)

Construction of fittings for the Armoury at Regina, Sask. Name of contractors, The Western Manufacturing Co., Ltd., Regina, Sask. Date of contract, November 29, 1929. Amount of contract, approximately $9,813. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in Group "A" (Construction, etc.)

Construction and delivery of a floating pontoon gate lifter for handling the lock gates of the Welland Ship Canal. Name of contractors, Collingwood Shipyards, Ltd., Collingwood, Ont. Date of contract, December 23, 1929. Amount of contract, $641,078. The General Fair Wages Clause was inserted in the contract.

POST OFFICE DEPARTMENT

Following is a statement of payments made in December, 1929, for supplies ordered by the Post Office Department under contracts which were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	1,602 83
Making and repairing rubber stamps, daters, etc.	362 00
Making up and supplying letter carriers' uniforms, etc	17,034 55
Stamping pads, ink, etc	348 79
Bag fittings	11,487 90
Scales	388 30
Letter boxes	1,991 26
Mail bagging	52,849 33

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Printing and Publishing

MONTREAL, QUEBEC.—CERTAIN EMPLOYERS AND THE ALLIED PRINTING TRADES COUNCIL OF CATHOLIC UNIONS.

Agreement to be in effect from September 15, 1929, to September 15, 1930.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE, November, 1928, with the following exception:

Wages for bookbinders (men): $35 per week.

Construction: Shipbuilding

ST. JOHN, N.B.—ST. JOHN DRY DOCK AND SHIPBUILDING COMPANY LIMITED AND THE BOILERMAKERS, IRON SHIPBUILDERS, ETC., EMPLOYED BY THEM.

Agreement to be in effect from March 25, 1929, to March 1, 1930, and from year to year thereafter unless 30 days' notice in writing is given by either party.

HOURS: 9 per day, 4½ on Saturdays for day work; if night shift employed, 10 hours per night, five nights per week.

Overtime: for regular day shift overtime up to midnight time and one half; double time from midnight to regular starting time, after which a rest period of nine hours will be given; if necessary to work during this period, double time to be paid. Double time also for all work on Sundays and holidays.

Wages per hour: acetylene-welders, electric-welders, burners, angle-smiths, angle and frame setters, operator of bending rolls, boilermakers, chippers and caulkers (steel) ship-fitters, rivetters, platers, punch and shear operators and loftsman 65 cents (gang foremen to be paid 5 cents per hour extra): holder-on and pneumatic tool repair team 55 cents; drillers, reamers, countersunkers, rivet heaters, shop crane runner 45 cents; helpers to above trades and bolter up 40 cents.

If any employee considers himself unjustly dealt with, the matter may be taken up by the duly elected committee with the management, and if necessary will be referred to arbitration. No strike or lockout to occur pending arbitration. No discrimination to be shown any member of the duly elected committee.

Service: Public Administration

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND THE CANADIAN BROTHERHOOD OF STATIONARY ENGINEERS.

Agreement to be in effect from January 1, 1929, to December 31, 1931, and thereafter until 60 days' notice is given by either party.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, October, 1928, and September, 1926, with the following exceptions:

No mention is made of paying employees who are quarantined.

Wages per month: second class engineers $185, machinist $175, relief engineer $155, blacksmith $150, waterworks operator $140, firemen, relief fireman and waterworks operator, boiler-washers $130.

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND THE CIVIC FEDERAL LABOUR UNION, LOCAL NO. 46.

Agreement to be in effect from January 1, 1929, to December 31, 1931, and thereafter until 30 days' notice is given by either party.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, April, 1928, and June, 1927, with the exception of changes in wages as follows:

City Police Department.—Wages per month: sergeants and detectives $150, constables $115 for third class, $125 for second class, $135 for third class, clerk and desk officer $10 per month over his grade as constable.

Public Works Department.—Wages: foremen $140 to $185 per month, pipe fitters and pipe layers $120 and $130 per month, labourers 45 and 50 cents per hour, street cleaners and weeders $75 per month or 35 cents per hour, janitor $115 per month, stenographer $85 per month, teamster 45 and 50 cents per hour, carpenter 70 cents, graderman and engineer for tractor road roller and cement mixer 75 cents per hour while on these classes of work and 52½ cents when on other work, stableman $45 per month. Men working in wet holes in repairing leaks to water mains, etc., to be paid 10 cents per hour extra.

Sanitary Department.—Wages per month: assistant sanitary and plumbing inspector $110, night soil department $130, caretaker at Isolation Hospital $85.

Gas Department.—Wages per month: foreman $145, pipe fitters and lamp repairmen $125 (one pipe fitter $90).

Parks Department.—Wages per month: foreman $145, cemetery caretaker $125 (with extra pay for work on Sundays and with house at rental of $5 per month), market cleaner $75.

MEDICINE HAT, ALBERTA.—CITY OF MEDICINE HAT AND THE INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS.

Agreement to be in effect from January 1, 1929, to December 31, 1931, and thereafter until 30 days' notice is given by either party.

No discrimination to be shown fire fighters on account of connection with union.

Wages per month: assistant chief $155, mechanic $150, captain $145, lieutenant $140, fire alarm electrician $135, firemen from $110 during first year to $125 during fourth year.

The City Council will receive a grievance committee from the union if requested.

After one year's service, wages will be paid in case of sickness for 14 days each year, or in case of sickness or injury resulting from employment, wages less compensation will be paid for 60 days.

Seniority to be considered in making promotions.

After one year's service, 14 days holidays per year to be granted.

Uniforms to be supplied by the city.

Handbook of American Trade Unions

The Bureau of Labour Statistics of the United States Department of Labour recently published, as Bulletin No. 506, a revised edition of the Handbook of American Trade Unions, which was first issued in October, 1926. The new Handbook includes national organizations as they existed in June, 1929, no mention being made of unions that were purely local in character, works councils, or company unions. An account is given of each organization on the list including a description of the trade and territorial jurisdiction of each, its form of government, the qualifications required for membership, its apprenticeship system, its methods of negotiating agreements with employers, the benefits paid to members, and other information.

Of the 146 organizations included in the Handbook, 106 are affiliated to the American Federation of Labour. The total membership of the international unions in the American Federation of Labour, as shown in the Handbook, is 3,485,141. This, together with 25,286 additional indirectly affiliated local unions, gives the American Federation of Labour a total membership of 3,150,427. The membership of unions outside the federation, including the Industrial Workers of the World, is 820,924, giving an aggregate of 4,331,251. This is exclusive of the three new organizations, the membership of which is not known. These figures, however, include the Canadian membership of the international unions. Figures given by the Department of Labour of Canada are quoted as showing that the Canadian membership in American unions for the calendar year 1928 was 148,609 in American Federation of Labour unions, and 42,708 in independent organizations, a total of 191,317. Eliminating this figure from the aggregate membership leaves 4,139,934 union members in the United States and its possessions.

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1929

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in Canada during December was toward somewhat higher levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly upward.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.83 at the beginning of December, as compared with $11.75 for November; $11.31 for December, 1928; $11.17 for December, 1927; $11.18 for December, 1926; $11.56 for December, 1925; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. Increases, mainly seasonal, occurred in the prices of eggs, milk, butter, prunes, sugar and potatoes, while the prices of beef, mutton, fresh and salt pork, bacon and beans were slightly lower. Including the cost of fuel and rent with that of foods, the total budget averaged $22.11 at the beginning of December, as compared with $22.03 for November; $21.56 for December, 1928; $21.37 for December, 1927; $21.41 for December, 1926; $21.87 for December, 1925; $20.90 for December, 1924; $21.21 for December, 1923; $20.97 for December, 1922; $21.49 for December, 1921; $25.67 for December, 1920; $26.92 for July, 1920 (the peak); $21.64 for December, 1918; and $14.26 for December, 1914. Fuel was slightly higher, due mainly to advances in the prices of anthracite coal. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100 was slightly higher at 96.2 for December, as compared with 95.8 for November; 94.5 for December, 1928; 97.3 for December, 1927; and 97.9 for December, 1926. Forty-four prices quotations advanced, eighty declined and three hundred and seventy-eight were unchanged.

In the grouping according to chief component materials three of the eight main groups advanced, four declined, while one was unchanged. The Vegetables and Vegetable Products group and the Animals and their Products group both were higher, the former due mainly to higher prices for wheat, which more than offset declines in the prices of coarse grains, rubber and vegetable oils, and the latter due to higher prices for cattle, live stock, fresh meats and eggs, which more than offset lower prices for leather and cured meats. The Non-Metallic Minerals and their Products group was also higher, due mainly to increases in the prices of coal and lime. The groups which declined were: the Textile and Textile Products group, chiefly because of lower prices for raw cotton, raw silk and raw wool; the Wood, Wood Products and Paper group, because of lower prices for certain lines of lumber and cedar shingles; the Iron and its Products group, due to lower quotations for steel sheets; and the Non-Ferrous Metals and their Products group, because of declines in the prices of lead, zinc and silver. The Chemicals and Allied Products group was unchanged.

In the grouping according to purpose, consumers' goods were slightly higher, increases in the prices of fresh meats and eggs more than offsetting declines in the prices of dried fruits, cured meats and silk fabrics. Producers' goods also advanced. In this group materials for the meat packing industries and for the milling and other industries were substantially higher, while declines occurred in materials for the textile and clothing industries, for the fur and leather goods industries, and for the metal working industries.

In the grouping according to origin, raw or partly manufactured goods advanced, due to higher prices for grains, live stock, eggs, meats and coal, which more than offset lower prices for raw textile materials, hides and rubber. Fully or chiefly manufactured goods were slightly lower, declines in the prices of glass, silk fabrics and cured meats more than offsetting higher prices for lime, chemicals and butter. Domestic farm products and articles of mineral origin were slightly higher, while articles of marine origin and articles of forest origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quota-

tions in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget an an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1927, and monthly since January, 1928. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1;

1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into

(Continued on page 100)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

(*Continued from page 93*)

the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1, 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The decline in meat prices in progress since August was continued in December, sirloin steak averaging 35.1 cents per pound, as compared with 35.9 cents in November; round steak 30.1 cents per pound in December and 30.8 cents in November; rib roast 28.1 cents per pound in December and 28.4 cents in November; and shoulder roast 22.2 cents per pound in December and 22.4 cents in November. The declines were not so pronounced in the Maritime Provinces as elsewhere. Mutton averaged slightly lower at 30.2 cents per pound, as compared with 30.4 cents in November. Fresh pork was lower, averaging 28.9 cents per pound, as compared with 30 cents in November. Decreases were reported from most localities. Bacon was also slightly lower at an average price of 39.7 cents per pound. In fresh fish, cod steak and whitefish were somewhat higher.

Eggs showed a substantial seasonal increase, fresh being up from an average of 58.5 cents per dozen in November to 65.2 cents in December, and cooking from 48.6 cents per dozen in November to 50.5 cents in December The price of milk advanced in the average from 12.6 cents per quart to 12.8 cents. Increases were reported from Sherbrooke, Sorel, St. Hyacinthe, St. John's, Montreal, Brockville and North Bay. Butter prices showed a slight seasonal increase, dairy averaging 43.8 cents per pound and creamery 47.5 cents per pound. Cheese was unchanged in the average.

Bread was unchanged at an average price of 7.9 cents per pound. Decreases, however, were reported from Hull, Ottawa, Brockville, Belleville and St. Catharines. Potatoes were slightly higher at an average price of $2.27 per ninety pounds, as compared with $2.21 in November. Prunes increased from 15.3 cents per pound in November to 15.8 cents in December. Granulated sugar was slightly higher

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%. †Revised.

at 7.3 cents per pound. Anthracite coal was up in the average from $16.17 per ton in November to $16.22 in December. Higher prices were reported from Belleville, Peterborough, Toronto and Woodstock. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The movement in grain prices was mixed, wheat advancing, while the prices of coarse grains, in most cases, were lower. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged $1.378 per bushel, as compared with $1.332 in November. Early in the month prices declined but toward the middle this decrease was halted and an advance began, which, in a few days, carried prices to a higher level than prevailed at the beginning of the month. The decline was said to be due to the fact that no appreciable decrease occurred in the visible supplies, while later in the month the advance was due to a greatly decreased estimate of the Argentine crop. Coarse grains, for the most part, were lower, western barley being down from 64.9 cents per bushel to 62.2 cents; flax from $2.72 per bushel to $2.64; American corn from $1.05 per bushel to $1.04; and western oats from 65.6 cents per bushel to 63.5 cents. Flour was unchanged at an average price of $8.60 per barrel, while rolled oats declined. The price of rubber continued a decline which commenced last July, Ceylon being down from an average of 16.73 cents per pound in November to 16.1 cents in December. The price of good steers at Toronto advanced from $8.89 per hundred pounds to $9.63, and at Winnipeg from $7.97 per hundred pounds to $8.91. Veal calves at Toronto advanced from $15.25 per hundred pounds to $15.76, while at Winnipeg the advance was more pronounced, the price being up from $9.71 per hundred pounds to $11.22. The price of hogs at Toronto rose from $11.52 per hundred pounds to $11.94, at Montreal from $11.63 to $12, and at Winnipeg from $10.34 to $10.36. Lambs at Toronto were 80 cents per hundred pounds higher, the price being $12.40. Beef hides were down from 14½-16 cents per pound to 13-16 cents. Fresh eggs at Montreal rose from 65.9 cents per dozen to 67.8 cents. Raw cotton at New York declined from 17.53 cents per pound to 17.275 cents. This is the lowest level reached since June, 1926. Raw wool declined 1 cent per pound to 24 cents. Raw silk was also lower, the price at New York being down from $5.15 per pound to $5. Hemlock lumber was down from $29 per thousand feet to

$28.50. Galvanized steel sheets at Montreal fell from $4.47 per hundred pounds to $4.35, while black sheets were up from $2.97 per hundred pounds to $3.07. The price of silver continued to decline, being down from 49.7 cents per ounce to 48.2 cents. The price of tin was slightly higher at an average price of 45.75 cents per pound, as compared with 43.75 in November. American bituminous coal was 25 cents per ton higher at $6.25.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 134.0 for November, a decline of 1.6 per cent from the previous month. Foods fell 1.8 per cent due to considerable declines in cereals and "other foods," partly counteracted by an advance in meat and fish. Non-foods declined 1.4 per cent, all groups being included in this fall.

The *Economist* index number, on the base 1927=100, was 88.3 at the end of November, a decline of 2.1 per cent over the previous month and of 7.3 per cent since November, 1928. All groups declined from the October level, the cereals and meat group showing a fall of 4 per cent.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877 =100, was 108.3 at the end of November, a decline of 2.5 per cent from the previous month. Every group was included in this movement and the heaviest fall was one of 5.3 per cent in vegetable foods.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 167 at the end of November, showing no change from the beginning of the month. The index numbers of every group were exactly the same as a month previous.

France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base July, 1914=100, was 596 for November, a fall of one per cent from October. The group "sugar, coffee, cocoa" was slightly higher, but apart from that, all groups were included in the general decline.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 135.5 for November, a decline of 1.2 per cent for the month. Of the 16 groups of commodities included only four advanced very slightly, namely, foods of animal origin, coal, artificial fertilizers and paper. All other groups declined.

COST OF LIVING.—The official index number of the cost of living, on the base 1913-1914=100, was 153.0 for November, continuing the decline since August which has been due to a lowering of food prices and also of clothing; heat and light and sundries were higher.

Australia

WHOLESALE PRICES.—The Melbourne index number, on the base 1911=1000, was 1858 for September as compared with 1826 in August. Advances were shown in agricultural produce, dairy produce, groceries, meat and building materials; there was a decline in jute, leather, etc., while metals and coal and chemicals were unchanged.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 94.4 for November, a decline of 2 per cent from October. All groups were lower in November, except fuel and lighting and housefurnishing goods which were unchanged.

Dun's index number, which is the estimated cost *per capita* of a year's supply of commodities in wholesale markets, was $188.969 at December 1, a fall of 1.2 per cent from the previous month. Every one of the seven groups was lower than the previous month, and all were lower than at December 1, 1928, with the exception of breadstuffs.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 163.0 for November as compared with 163.4 for October. There were no marked changes in any of the groups, but slight decreases were noted in food, housing and clothing and slight advances in coal and sundries.

The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 160.7 for November, a decline of one point from October, due chiefly to lower prices for foods, principally meat, and also butter, lard, sugar and canned goods.

NOTES ON RECENT LEGAL DECISIONS AFFECTING LABOUR

Limits of Jurisdiction of Compensation Board

An employer in Alberta was convicted by a police magistrate on a charge that he refused to pay an assessment levied against him by the Board under the Workmen's Compensation Act (Accident Fund), Revised Statutes of Alberta, 1922, chapter 177. He based his refusal on the claim that the regulation under which the assessment was made was beyond the authority of the Workmen's Compensation Board. On a stated case he appealed to the Alberta Supreme Court against his conviction, and the appeal was allowed with costs, the conviction being quashed. The judgment of the Court was delivered by Chief Justice Harvey, who first examined the provisions of the Act in detail.

The regulation under which the assessment was made is in the following terms:

Regulation 11.—Where the amount chargeable to the account of any employer during any calendar year is in excess of one hundred and five per cent of the amount of assessment received during such calendar year, the final assessment shall be fixed in such account applicable to the true payroll of the calendar year in question, by being increased to a rate over and above the basic rate of the class or sub-class in which the account is being carried, one per cent on the basic rate for each one per cent that the amount chargeable exceeds one hundred and five per cent of the amount received; but in no case shall the increased rate exceed thirty per cent of the basic rate of the class or sub-class as fixed by the Board;

Provided, however, that due regard shall be had to the total experience of the account of an employer, and an increase in assessment rates will only be made when the total amount chargeable to his account exceeds the total amount received from him by one hundred and five per cent.

By sec. 13 it is provided that:

The Board shall have exclusive jurisdiction to examine into, hear and determine all matters and questions arising under this Act, and the action or decision of the Board thereon shall be final and conclusive and shall not be open to question or review in any Court.

Sec. 15 provides that:

The Board may make such regulations and prescribe such forms as may be deemed expedient for carrying out the provisions of the Act.

The Chief Justice stated that it was contended by counsel that the Court had no jurisdiction to interfere with the action of the Board. "I feel no doubt," he said, "that view is absolutely correct as respects any action of the Board within its jurisdiction, but it is to be noted that its jurisdiction is limited to 'Matters arising under this Act' and its regulations are to be for the purpose of 'carrying out the provisions of this Act.' It would be unreasonable to think that when the Legislature created a Board with extensive powers such as this, without control other than that of its creator, it intended to permit it to act even beyond those powers; but on the other hand it must be assumed that it considered it had the right to rely on its superior Court to exercise the power which it possesses to prevent where necessary any acts of any Board beyond its jurisdiction. If the Board's acts have been in excess of the authority given it by the Act I have no doubt this Court may so declare and prevent effect being given to them. It is necessary, therefore, to see if such is the case, for it is on that ground only that this appeal is taken.

"The evidence in this case was given by the Board's auditor inspector. From that evidence it appears that in 1927 one of the defendant's workmen was accidentally killed and the compensation was fixed by the Board in 1928 at $6,289.43. There was charged to the defendant's account in 1928 for this, and presumably some other matters, $8,046.69. I assume this was done in accordance with the direction of sec. 33. For the year 1928 the defendant, upon a payroll of $123,891.59, paid a regular assessment of $1,706.55. The witness says that taking into consideration the whole credits and debits of the defendant it was left liable to an assessment of $743.35 under the regulation above set out, and it is the assessment for that sum which is here in question.

"It is to be noted that sec. 20 separates the classes, but not the employers in any one class. The employers in each class are to be assessed a percentage on the payroll or some other rate or a specific sum. There is nothing in that which, in my opinion, authorizes the singling out of any particular employer for special treatment on a different basis from that applied to the others in the same class. The hazards of classes may be different and justify different assessments, but in the same class it seems clear to me that the intention of the section, particularly when read with secs. 31-33, is that all employers shall be treated alike. This view is emphasized by the fact that there are two provisions of the Act authorizing special assessments against individual employers in case of special hazard. By sec. 33 (2) when in the opinion of the Board an employer fails to make sufficient provision to prevent accident or the sanitary and health conditions are not proper, a special assessment may be made against him and by sec. 25a (2), added in 1924, where an accident is due *entirely* to the failure of the employer to comply with the directions of the Board or its regulations it

may assess against him a sum up to one-half the amount of compensation but not exceeding $300.

"It would seem very strange indeed if where the accident is due entirely to the employer's default only an amount not exceeding $300 may be collected, while, when he is in no way at fault, an amount without any fixed limit and in the present two and a half times as much may be collected from him. This never could have been intended by the Legislature. In my opinion, therefore, the regulation in question, since it does not carry out any provision of the Act, is unauthorized and invalid, and the assessment based upon it is equally unauthorized and invalid."

Rex ex rel Davies v. F. W. McDougall Construction Company Ltd., Alberta, *Western Weekly Reports*, 1929, vol. 3, page 450.

Where Hiring is by month no wages are earned for less than month

Joint action *in rem* for wages was taken in the Exchequer Court of Canada (Prince Edward Island Admiralty District) against a steamship by the captain, the mate, the engineer, two firemen, two seamen, and the cook. All these employees had been hired by the month, and the wages sued for were in part for an uncompleted month. Some of the circumstances in the case were set out in the judgment of the Court, which was in part as follows:—

"It is a well-established legal principle that wages cannot be sued for until earned, and that if a hiring at so much a month is made, no wages are or can be earned until the whole month's service is performed. This is so well known that it is difficult to understand why the plaintiffs in this case should have set the law in motion to arrest the defendant ship, not only for the amount due for the several months that had been earned but for substantial sums that had not been earned. . . . .

"The contention of all plaintiffs at the trial was that they had never been discharged from their several positions in the defendant ship and that they still held these positions. By what right or authority can the owner of the ship be placed in the position of being compelled to pay wages that have not been earned in order to recover possession of his ship? If the crew had been improperly dismissed, they might recover for the extra days, but that would be in the way of damages. If an application had been made on behalf of the ship in proper time to have the arrest set aside, it is difficult to see by what means this could have been successfully avoided, but such an application, after the parties have come prepared to have the case tried on the merits, appears to be too late. The owner of the ship instead of applying in time filed an absolute appearance to the action. In admiralty practice, if the defendant wishes to raise an objection to the jurisdiction of the Court, in a case where the Court has jurisdiction over the subject matter, he should appear under protest whether the action be *in rem* or *in personam*."

The owner of the ship having been too late in making an application for setting aside the arrest of the ship it remained that the case should be tried on its merits. The Court accordingly allowed the plaintiff's claims in so far as they were for completed months of service.

Burke et al versus the "Alma." Exchequer Court of Canada, P.E.I. Admiralty District, 1929 (4) *Dominion Law Reports*, page 873.

Holding of Street Meeting does not Constitute a Disturbance

The High Court Division at Toronto, on November 19, quashed the conviction by one of the city police magistrates, of a woman on the charge that she "unlawfully did cause a disturbance in Soho Street, in the said city of Toronto, by impeding and incommoding peaceable passengers, and thereby was a vagrant, contrary to sec. 238 (f) of the Criminal Code." Judge Garrow, who heard the appeal of the defendant in chambers, found that there was no evidence that peaceable passengers had been incommoded. People were there in numbers to see what took place, but there was no evidence indicating that the accused caused them to gather there. It would be quite as reasonable to say that they were there because the police were there in force. The accused did not herself obstruct, impede, or incommode any one, nor did she cause any one to be so impeded or incommoded, nor was any one shewn to have been actually impeded or incommoded. The mere holding of a meeting in a street does not necessarily involve the incommoding of passengers. Proof of actual impeding is essential to justify a conviction: Rex vs. Kneeland (1902), 6 Can. Crim. Cas. 81.

Second, it was contended that, even assuming that there was proof of impeding peaceable passengers, it is necessary to go further under this section and establish that the accused did cause a disturbance by impeding passengers: Regina v. Daly (1888), 24 C.L.J. 157. If passengers were in the present case impeded, there was an entire lack of proof that such impeding caused any disturbance. Reference to Regina v. Booth (1890), 6 Can. Crim. Cas. 338, note.

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] FEBRUARY, 1930 [NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A SEASONAL contraction in industrial employment in Canada was reported by employers at the beginning of January, 1930, the resulting losses involving practically the same proportion of the aggregate staffs as was indicated on January 1, 1929. The employment situation, however, continued better than on the corresponding date in any other year of the record, which was instituted in 1920. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. The Dominion Bureau of Statistics tabulated statements from 7,063 firms, each with at least 15 employees, in all industries except agriculture, fishing, hunting and highly specialized business. The pay-rolls of these concerns declined from 1,037,259 persons on December 1, to 967,540 at the beginning of January, a decrease of some 70,000 persons or 6.7 per cent. Reflecting this contraction, the employment index number (based upon the 1926 average as 100) stood at 111.2 on January 1, 1930, compared with 119.1 in the preceding month, and with 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. At the beginning of January, 1930, the percentage of idleness reported to the Department of Labour by local trade unions stood at 11.4, contrasted with 9.3 per cent at the beginning of December, and with 6.6 per cent at the beginning of January, 1929. The January percentage was based on the returns received by the Department of Labour from a total of 1,790 local unions covering a membership of 213,065 persons. Reports received from the offices of the Employment Service of Canada indicate an increase in the volume of business transacted in December, as shown by the average daily placements effected, when a comparison is made both with the previous month and also with December a year ago. This increase was due chiefly to increased placements in construction and maintenance. Logging, however, also showed a gain, though of lesser degree, in comparison with the corresponding month last year.

The average cost of a weekly family budget of twenty-nine staple foods was $11.88 at the beginning of January, as compared with $11.83 for December, 1929; $11.30 for January, 1929; $11.19 for January, 1928; $11.37 for January, 1927; $11.63 for January, 1926; $10.77 for January, 1925; $10.73 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $12.42 for January, 1918; and $7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 95.6 for January, as compared with 96.2 for December, 1929; 93·7 for January, 1929; 96·9 for January, 1928; 97.8 for January, 1927; and 103.0 for January, 1926.

The loss in working time caused by industrial disputes in Canada in the month of January was again slightly less than in the preceding month, and was less also than the loss in January last year. Four disputes existed at some time during the month, involving 1,949 workers, and resulting in the loss of 7,610 working days. Corresponding figures for December, 1929, were: seven disputes, 1,684 workers, and 12,979 working days; and for January, 1929, seven disputes, 794 workers, and 8,319 working days.

Industrial Disputes Investigation Act

During the month of January the city of Winnipeg agreed to the reference to a Board of Conciliation and investigation of the existing dispute between the Winnipeg Hydro-Electric System and its employees, the latter having submitted to the minister an application for the appointment of such a board, as noted in the issue for December, page 1333. Further particulars of the proceedings under the Act during the year are given on page 117.

Provinces consulted on unemployment insurance proposals

The Minister of Labour informed a delegation from the Confederation of Catholic workers of Canada on February 6, that the Dominion Government was consulting the provincial governments in order to ascertain whether they would be willing to support a federal unemployment insurance scheme. He pointed out, however, that the Dominion could not undertake such a scheme unless the difficulties presented by the provisions of the British North America Act could be surmounted.

It will be recalled (LABOUR GAZETTE June, 1929, page 603) that at the last session of the Parliament of Canada, the Committee on Industrial and International Relations accepted and endorsed the principle of unemployment insurance, based on compulsory contributions derived from the state, employers and workers. They recognized, however, that "while it is highly desirable that such legislation should be uniform in all the provinces, and while social insurance has a federal aspect, nevertheless, according to the Department of Justice, under our constitution legislative jurisdiction in relation to the establishment of a compulsory system of unemployment insurance is vested exclusively in the provincial legislatures."

The committee recommended that the Federal Government should bring the matter before the next Federal-Provincial conference, representatives of the employers and workers being invited to attend. In the meantime, Mr. Heenan stated, the Government is proceeding to ascertain the views of the provincial governments on the question of the establishment of a system of unemployment insurance.

Progress of Canadian Government Annuities

The Government Annuities Branch of the Department of Labour reports a rapid increase in the volume of business transacted during the past three years. During this period the number of applications and the amount of purchase money received has almost equalled that received during the preceding eighteen years. The total number of contracts from 1908 to the present day is nearly 12,000, the total annuities purchased amounting to a total of $24,000,000.

The Annuities system was inaugurated by the Dominion Government in 1908 in order to encourage thrift among the people and to provide for their old age. The small regular payments required from those purchasing annuities still remain practically nominal, while in return for these small payments every purchaser at the age of 65 becomes entitled to an income for life that would provide comfort and security to old age. All administration costs of the system are borne by the Government, no charge for this purpose being made against the annuity purchaser. Operating without profit, the government is enabled to allow extremely low premium rates, and the purchaser is guaranteed full benefit for the money he pays in. The obvious benefits of the annuities system, together with the smallness of the payments required, provide working people with an easy means of ensuring comfort and independence for their old age.

Public works and unemployment relief in Canada

In a statement early in February on the Dominion government's attitude in regard to unemployment in Canada, the Minister of Labour said that the government held the view that any projects contemplated to give work should be started as soon as possible. The Canadian Government, he pointed out, had taken important steps in this direction, there being public works now in progress throughout Canada which would aggregate well over $20,000,000. This total does not include the important contracts for railways, ferries, patrol boats and various purchases by the Department of National Defence, nor does it include the Welland canal and considerable harbour works. Mr. Heenan stated further that public works in the province of Ontario that were being carried on by the government of Canada without any assistance from the province or municipalities aggregated about $12,000,000, exclusive of the Welland canal, while in the Prairie provinces and British Columbia works involving another $4,000,000 worth were under construction, including many public buildings in various centers, three or four Indian schools and a number of wharves along the Pacific coast.

The Minister of Labour suggested that if the various provinces were to undertake public works, including road construction, in a similar manner a great deal of relief from unemployment would be forthcoming.

Unemployment relief works in New Zealand

Shortly after coming into office, and in order to allay the growing anxiety concerning the large volume of unemployment, the Prime Minister of New Zealand made a statement to the effect that he would find work for all the unemployed within five weeks provided they registered at the Government labour bureaux and were willing and able to accept the work offered them. This statement attracted a

great deal of attention both in New Zealand and in the different states of Australia. Immediately after the announcement of the Prime Minister the Government labour bureaux were inundated with applications for work, 11,466 registrations being made in October. On November 1st, the date at which the five weeks expired, a statement was made in the House of Representatives showing that there were only 2,299 on the register, of whom only 1,000 were willing to accept any work that was offered to them. These were being placed in employment in the course of the following few days. The Government found work for 5,664 workers on public works and in local bodies. The public works themselves absorbed 5,135. The remainder are accounted for by the fact that 4,228 applications which had been registered lapsed during the month of October.

The public works undertaken by the Government were all necessary developmental works which would have to be undertaken in the near future and are now being carried out earlier than they would have been but for the necessity of providing employment for a large number of men. The Cabinet Committee met practically every day and only sanctioned useful and necessary works which would entail the least amount of travelling and consequent expense to the men. The works provided for the employment of men on the construction of railways, roads and main highways, land drainage, improvements to open lines of railways, and planting and thinning of State forests. There had in the past been complaints that men employed on relief works were paid less than the standard rate of wages. Under the new plan unskilled workers are paid the standard wages of 14s. a day, and when placed on co-operative contract the contract rates which are being paid are such as would enable a man of fair average ability, working industriously, to earn 14s. a day. Inexperienced men are allowed up to fourteen days on day wages before being given co-operative contracts.

Unemployment situation in Australia

The unemployment situation has assumed considerable importance in all the States of the Australian Commonwealth, and various measures have been discussed with a view to remedying the condition. At a meeting held on December 9 at Canberra of the Prime Ministers and Treasurers of the Commonwealth and of the States, the States undertook to spend £1,000,000 immediately on road works. The money will be made available from the surplus that has accumulated under the Federal Roads Act owing to the inability of the States to comply with the original conditions regulating their own contributions to the grant. These conditions are now being waived. A further £1,000,000 is promised in the near future. Owing to the difficulty of marketing the coal without loss coal-fields have closed down in New South Wales, which has contributed to increase unemployment. A reduction of wages was urged with a view to enabling the mines to continue production, but the men refused the offers. In the State of Victoria, the Premier was able to inform the Assembly that 3,299 persons had been sent to employment between August 1 and October 15, 1929, nearly all of them engaged on public works, and that £6,843 had been paid in September alone to the municipalities as grants for unemployed relief works.

Representations were made urging the Premier of Victoria to consider seriously the possibility of introducing the scheme adopted by the New Zealand Government, which is referred to in the preceding note.

The Commonwealth Government also hope to relieve the stress of unemployment by suspending assisted immigration and by raising the customs tariff.

Unemployment statistics in United States

In the LABOUR GAZETTE, September, 1929, page 962, it was noted that the Act of Congress providing for the taking of the fifteenth census of the United States made definite provision for the collection of statistics on unemployment. The Commissioner of Labour Statistics, in his last annual report just published, referred to the efforts that are to be made during 1930 to secure definite figures showing the extent of unemployment throughout the country. "At the present time," he said, "the greatest interest in the field of labour attaches to the problems of employment and unemployment. A country-wide unemployment survey, the need for which has been pointed out repeatedly by the Department of Labour, will be made as part of the 1930 Federal census. This will supply the basic facts regarding the actual number of persons out of work in the United States. With this known, the employment statistics collected monthly by the Bureau of Labour Statistics will furnish the necessary indexes by which the trend of employment may be followed thereafter. The Bureau's monthly surveys, it will be remembered, show the monthly changes in the number of persons employed by repre-

sentative American establishments, but these figures do not show the number unemployed. With this latter fact known for a given time, as it will be as a result of the 1930 census, the bureau's figures, as noted, will constitute a fairly accurate barometer of unemployment as well as of employment conditions in the United States."

"Decasualization" of dock labour in England

In the LABOUR GAZETTE, August, 1924, reference was made to various schemes for "decasualizing" the employment of longshoremen. Among these was a British plan that was proposed by a commission first appointed in 1920 to inquire into the condition of dock labour. The commission recommended the establishment of a system of registration for the workmen, and of minimum scale for a guaranteed working week, together with the maintenance of unemployed casual labour; and further that a joint council should be set up for the industry. Action was subsequently taken at many of the ports of Great Britain to give effect to these recommendations, but it is now considered that the time has come for a further advance. Accordingly the Minister of Labour (the Right Hon. Margaret Bondfield) recently asked the Dock Transport Workers (Registration and Guaranteed Week) Committee, a body appointed in 1924, to make further inquiries with the object of extending and co-ordinating registration schemes for port workers, and other measures adopted in the ports of the country for decasualizing port labour.

Progress of trade unionism in Canada

Professor H. Mitchell, of McMaster University, continues his series of economic studies in the issue of *Industrial Canada* for January, 1930, the subject of his latest study being the "Progress of Trade Unionism in the Dominion." He points out the difficulty of correctly estimating the extent of union membership owing to its rapid fluctuations, the membership "sometimes increasing at an apparently extraordinary rate, at others receding equally quickly. Membership will even vary within fairly wide limits from month to month and the task of the compiler of accurate records is by no means an easy one. We have, however, in the reports of Labour Organizations in Canada, issued by the Department of Labour in Ottawa since 1911, a painstaking compilation which may be accepted as accurate."

Discussing the variations in the membership of international and national organizations Professor Michell points out that "from 1918 to 1920, when the international unions were increasing rapidly, the non-internationals were decreasing, but since then the latter have been rapidly increasing. To put this movement into figures, it may be pointed out that from 1920 to 1928 the international unions lost 80,330 members, while the non-international unions gained 29,661. In this estimate, no account has been taken of the Catholic unions in the Province of Quebec, nor of the I.W.W. or the O.B.U., the membership of which is highly problematical. It is, therefore, quite apparent that while the non-international trade unionism in Canada is still far behind international unionism in point of members it is still in a very flourishing state and increasing rapidly. Reckoning in percentages it may be said that in 1920 of the three main classes, the international unions represented 90 per cent of the membership; non-international, 8 per cent, and independent, 2 per cent. In 1928 the internationals represented 75 per cent; the non-internationals, 21 per cent, and the independents, 4 per cent."

Statistical Annual of Quebec

The sixteenth Statistical Annual of the Province of Quebec, giving full information concerning the population and activities in the province in 1929, has been issued recently by the Quebec Statistical Bureau. The Annual is in eleven chapters, dealing respectively with the history of the province from the earliest times; physical characteristics; climate; population; education; government; finance; industrial production; communications; commerce; labour organizations; and insurance. A new feature of this issue is a study of the occupations of the people, based on the information in the census of 1921. The chapter on organized labour contains lists of trade unions in the province, with average wages and hours of labour of employees. Statistics of strikes and of employment and unemployment for a series of years are also included. There is also an account of the new Workmen's Compensation legislation, together with statistics of accidents occurring in the several industries in the province. An important section is devoted to an account of agriculture and the various agricultural and co-operative organizations. The mineral and manufacturing industries of the province also are fully analysed. The Annual may be obtained from the Bureau of Statistics of Quebec, Parliament Buildings, Quebec.

Immigration inquiry in Saskatchewan

The Government of the Province of Saskatchewan, by an order in Council dated January 4, 1930, appointed a commission to investigate the subject of immigration, the members of the commission being as follows: —Professor William W. Swanson, of the University of Saskatchewan; Mr. Thomas Johnson of Govan; Mr. Percy Shelton, of Regina; Mr. Garnet C. Neff, of Grenfell; and Mr. Alfred R. Reusch, of Yorkton, Saskatchewan. These commissioners are appointed for the purpose of making inquiry into and concerning the subject of immigration and settlement as affecting Western Canada, with special reference to the Province of Saskatchewan, and more particularly to make inquiry into and concerning the following matters: (*a*) the various policies that have been applied in connection with immigration, and their effect upon the economic and social well-being of the people of Saskatchewan; (*b*) the natural resources of the Province of Saskatchewan, with special reference to the growth and development of population and enterprise; (*c*) previous movements of population into the Province and the relation of such movements to economic, cultural and social standards of community life; (*d*) loss of population through emigration, and the causes and effects thereof; (*e*) possibility of adopting a plan for assisted settlement of natives and other residents of the Province and other Canadian applicants; (*f*) expediency of similar or other schemes, with the financial co-operation of the Imperial Government, to promote desirable British immigration; (*g*) the problem of enlarging trade interests with the British Commonwealth and other countries whereby financial and industrial participation in the development of Saskatchewan may be increased and related immigration correspondingly encouraged; and (*h*) such other investigations as are germane to the subject of the inquiry; and to make such recommendations as to all or any of these matters as the Commissioners may deem desirable in the public interest.

Plea for taking a vocational survey

In a paper read before the Congress of the Workers' Education Bureau of America last October, Dr. Ethelbert Stewart, United States Commissioner of Labour Statistics, dealt with employment problems resulting from the changing character of industry. (References to this subject were made in the LABOUR GAZETTE, July, 1928, page 682; August, 1928, page 818; October, 1928, page 1040.) Dr. Stewart takes a serious view of the situation that has arisen as the result of the industrial developments of the past ten or fifteen years, stating that there is "hardly an industry in which to-day there are not either present hardships or serious threatenings." "The number of people," he says, "who have seen the trades, to learn which they put in from four to seven of the best years of their lives, suddenly pass away, are to be counted by the millions. To expect any considerable percentage of these men to readjust themselves along lines which will afford them wages equal to those they secured under former conditions, or rather wages that will keep them in the same relative position in the labour world that they occupied before, is to my mind absurd. In most cases a complete industrial re-education will be necessary, and in many instances the men will have to be separated entirely from the industry in which they have been formerly employed."

Some trades, such as those of printers and telegraphers, have been able to adjust themselves to the new conditions, but other trades have disappeared, or are changing beyond recognition. For example, "cement bridges may mean more bridges, but are rapidly ending ending the trade life at least of structural iron bridge builders. The cast house looms in the foreground of the picture, out of which is probably passing the bricklayer and the brickmaker, the carpenter, and the structural steel worker, just as the riveting machine and the acetylene welder are changing the whole complexion of structural work. Manufacture by chemical processes is another form which the industrial revolution is taking." The rate of these recent changes, the writer points out, has been far more sweeping than at any previous stage of industrial evolution. "There is hardly an industry in which to-day there are not either present hardships or serious threatenings."

To remedy these conditions, Dr. Stewart recommends that a statistical survey should be made of labour opportunities, and that this survey should be the starting point in educating and re-educating the workers; "The working people of the United States," he says, "are entitled to know what the changing industrial conditions are, where they are, and the nature and extent of the occupational readjustment which is necessary to meet them without loss of earning power or industrial status." Dr. Stewart claims that no adequate arrangements are being made to-day for the guidance of young persons to suitable vocations, the result being maladjustments, and aimless seeking of jobs regardless of personal adaptability. "Something can be done," he suggests, "by insisting upon vocational advice in our public schools, but this means a revolution in the occupation of teaching."

United co-operative movement is desired

The Co-operative Union of Canada is aiming this year at the consolidation of independent co-operative efforts throughout Canada into the general movement represented by the central organization. The *Canadian Cooperator* January, 1930, states that "considerable progress was made in the Co-operative Movement in Canada last year, but the one which has just commenced ought to mark a much greater advance. While the majority of the largest and most prosperous consumers' societies are members of the Union, there are some hundreds of very small incorporated co-operative bodies which, under proper guidance, could be developed into strong and progressive distributive institutions, providing a comprehensive community service. Every effort will be made to bring home to these organizations the folly of standing aloof, and the great advantage which would accrue to them by regularly availing themselves of the united experience of the whole Movement covering a long period of years. The Executive of the Union seeks the co-operation of the affiliated societies in gathering into the national co-operative fold, these isolated organizations. It is particularly desirable at this time to increase the number of members of the Union in each province, in order that autonomous sections thereof may be organized for intensive development."

Consolidation of British Co-operators

The last annual report of the Central Board of the Cooperative Union of Great Britain also made an appeal for closer union between cooperative bodies that are now more or less independent. "Mergers during the year", it was stated, "indicate a concentration of power inimical to the interests of co-operators and consumers generally. The choice before the people of Britain is between capitalist monopoly and democratic control of the essential means of life. In face of this situation, the Central Board has done, and is doing, all possible to give effect to the call of the President at Hartlepool for a consolidation of co-operative forces; and already some Sections and District Associations have drawn up schemes of amalgamation and entered on preliminary negotiations to give effect to them. The Central Board earnestly hopes that societies will put aside all preconceived objections to such schemes, and do all in their power to bring the ideals of closer union swiftly to fruition. For many societies open to remorseless competition this measure of co-operative consolidation will come, not as an act of surrender, but of self-preservation. That is the material side of the question. On other grounds the Central Board bases its main appeal. For the sake of future co-operation in this land and the community it serves, all local prejudices and predilections must be subordinated to the need of the hour."

Proposed workmen's compensation changes in Manitoba

The special committee appointed last year in Manitoba to inquire into subject of workmen's compensation in the province, has drawn up a list of recommendations for the improvement of the existing Act which will be submitted to the legislature at the forthcoming session. The suggestions made to the committee by the workers' and the employers' representatives were noted in the LABOUR GAZETTE, December, 1929, page 1323. The committee, which was composed of five members of the legislature, five employers' and five workmen's representatives, recommend as follows:—

1. That payment of compensation, which under the present Act does not begin until after the lapse of three working days from the date of injury, should commence three consecutive days from the time of accident.

2. That the allowance to widows of workmen killed in industry be increased from $30 to $40 per month, with the provision that there be a maximum allowance of 66⅔ per cent of the average earnings of the workman and a minimum of $12.50 per week except where there is more than one child, in which case the amount would be $15 a week.

3. That compensation be paid injured workmen suffering broken dentures.

4. That conjunctivitis and retinitis (impairment of vision) and dermatitis (skin eruption) be included in the list of industrial diseases for which compensation is paid.

5. That section 25 of the Act, which excludes payment of claims submitted by dependent widows or other dependants living in what were enemy countries during the war, be rescinded.

6. That the Act be amended to cover hernia.

7. That provision be made to take care of workmen, otherwise entitled to benefits of the Manitoba Act, who are injured outside of the province.

8. That the Workmen's Compensation Board be given discretionary power to set fees for medical reports. The Act now sets a fee of $2.

9. That the Board be given authority to make periodical revision of cases on its compensation lists.

United States Employees' Compensation Commission

The 13th annual report of this commission, covering the 12-month period ending June 30, 1929, was recently published. The commission is composed of three commissioners, one being designated by the President as chairman. Its work consists in the administration of three federal acts: (1) The Act passed in 1916 to provide compensation for employees of the United States suffering injuries while in the performance of their duties; (2) the Longshoremen's and Harbour Workers' Compensation Act, approved in 1927 (Labour Gazette, April, 1927, page 397); and (3) the District of Columbia Workmen's Compensation Act, which became effective in July, 1928, making the benefits of the Longshoremen's Act effective in relation to certain employees in private employment in the District of Columbia (Labour Gazette, June, 1928, page 562).

The organization of the administrative work of the Commission is as follows: Under the Federal Compensation Act the commission maintains its administrative office in the District of Columbia, and from that office directs the work carried on in the field with the assistance of local officials. This work requires extensive field investigations as well as a large amount of correspondence to establish the facts with relation to claims. There is also involved considerable correspondence and research work concerning medical questions. The field investigations are carried on to a large extent through the district offices established under the Longshoremen's and Harbour Workers' Compensation Act. This delegation of duties keeps down the cost of administration by reducing expenses for travel. When field investigations are necessary the instructions are usually sent to the district office, from which a representative makes the investigation.

Under the Longshoremen's and Harbour Workers' Compensation Act the commission alone is responsible for the administration of the Act. Its duties include the appointment of deputy commissioners, provision for adequate help, equipment, and supplies, promulgation of regulations and standardizing the procedure and work of the deputy commissioners.

Where an injury occurs within the terms of the Longshoremen's and Harbour Workers' Compensation Act the deputy commissioner has authority to consider and decide whether to award compensation or reject the claim. Review of any order of the deputy commissioner may be made by the United States District Court on application within 30 days if it is alleged that the order is not in accordance with the law. The commission may not review any compensation order made by the deputy commission. The plan of procedure and the supervision exercised by the commission are the same under the District of Columbia Act as under the Longshoremen's Act.

Industrial relations in Sweden

Following a conference of employers and workers held in Stockholm in December, 1928, a joint committee, representative of the employers' and workers' organizations and of the Government, was appointed to propose measures for the promotion of collaboration and industrial peace. This Industrial Peace committee recently submitted a unanimous report, which has been favourably received by the press. Several of the proposals it contains have already given rise to action by the various organizations. The Association of Swedish Civil Engineers organized a first course of training held at Stockholm in November, on social and industrial economy, the course being attended by 70 persons. The Central Board of Education, in a memorandum to the Government, has given its full support to the suggestion made by the committee that increased instruction should be given in the higher technical institutes concerning the economic and social problems arising out of industrial management. Finally, the Federation of Swedish Industries has decided that at the next meeting of its executive committee it will consider the committee's proposal concerning the training of a lower grade supervisory staff.

The Speech from the Throne at the opening of the Manitoba Legislature on January 21, announced that the government proposed to amend the Old Age Pensions Act so as to require that applications for pensions, before being dealt with by the Board administering that Act, must be submitted for the approval of the authorities of the municipalities in which the applicants reside.

Five delegates from the Women's Federated Union were seated at the January meeting of the Halifax Trades and Labour Council. This was the first time that women served as delegates. President P. J. Healy congratulated the women members on their action, stating that their advent marked an epoch in the history of organized labour in Halifax.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada at February first was commented upon by the superintendents of the Employment Service of Canada as follows:—

In the province of Nova Scotia large catches of fish were reported. In this province building and construction were rather active for the time of year at Halifax and New Glasgow, but fairly quiet elsewhere. Manufacturing, including the iron and steel industries, continued to show about normal production. An improvement in the weather conditions had increased activity in the logging industry. Winter port activities at Halifax were reported as very good. Coal production in Cape Breton was about average for the time of year. Wholesale and retail houses reported trade as fair, with collections likewise reported as fair. The demand for women domestic workers continued to be more numerous than the average supply.

As in the province of Nova Scotia, fishing catches in New Brunswick were rather satisfactory. Orders for workers for the logging industry being listed at the employment offices in this province were not numerous, as the industry appeared to be somewhat slack. Although construction work in the city of St. John seemed quite busy for the time of year, other centres reported very little work going forward. Manufacturing seemed quite normal for the winter season. Trade and activity in the transportation industry were both fairly good; activity at the winter port of Saint John, however, was not so brisk. The usual demands for women domestic workers were reported by the different offices.

Very few vacancies for farm workers were notified to the Quebec employment offices during the month of January. The peak season in the logging industry approaching, a substantial reduction in the placement of bush workers by offices in this province was reported. The usual seasonal falling off in manufacturing was reported from the city of Montreal, boot and shoe and textile mills particularly being mentioned; improvement was noticeable, however, in the rubber and tobacco industries, while conditions in clothing were normal. The leather trades in the city of Quebec were rather quiet. Textiles in Three Rivers were working with a reduced staff. Retail trade showed some signs of seasonal slackness. Vacancies for women domestic workers were not as numerous as usual, with some surplus of applicants reported in the city of Montreal.

A slight increase in the number of orders for farm workers, with inquiries as to the availability of help about the middle of March beginning to come in, was reported from the province of Ontario. Activity above normal was the comment on logging in the northern section of the province, with experienced bushmen still in demand. Mining continued normal activity, though as usual requests for additional workers were negligible in number. Some slight change for the better was reported in manufacturing, and while staff reductions on the part of some firms continued, in other cases former staffs were being re-engaged. Due to severe weather conditions building and construction activity was not going forward in the volume that might otherwise have been expected. The demand for women domestic workers continued, with a shortage of applicants in some localities.

Although many men were still looking for farm work in the Manitoba offices, some improvement in the number of vacancies reported was noticeable. Quite a number of men were being sent out to the logging industry by the Winnipeg office, but a falling off in orders was reported. Some construction work was being proceeded with during the month, and Brandon and Winnipeg both reported prospects for the forthcoming season in the industry as very bright. Winnipeg reported manufacturing as rather slow by comparison with the previous winter. Mining activity in the northern section of the province continued. While many inexperienced women and girls looking for domestic work were unemployed in Winnipeg, a rather substantial number of placements of this sort were being made.

In Saskatchewan vacancies for farm workers were not numerous, and more than sufficient applicants were available to fill those reported. Building and construction were quiet, with some men being employed at work opened up to afford relief to the situation. A few men were being sent out for work in the logging industry. The demand for general labour was only fair, and not in proportion to the number of applicants applying. A few women domestic workers were being placed by the different offices.

Applicants for farm work registered at the Alberta employment offices were numerous, while jobs for them were not very plentiful. Building and construction activity was light.

From the Drumheller district it was reported that conditions in the coal mining industry were fair. Some cities had opened up relief work which was providing employment for quite a number of the unemployed. Requirements for women domestic workers were not numerous.

Although the logging industry in the province of British Columbia showed some improvement, it was not expected that the number of unemployed loggers would show a material decrease for some little time. The metal mines throughout the province continued to work steadily. Building and con-

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

struction activity was fairly quiet, apart from work that the railways had in hand. Manufacturing conditions seemed about normal. Orders for women domestic workers were not quite so numerous, although Victoria reported a shortage of cooks-general. The numbers of applicants, both male and female, registered at the different British Columbia offices did not seem exceptionally large for the time of year.

EMPLOYERS' REPORT. The seasonal curtailment in employment registered at the beginning of January, 1930, involved much the same proportion of the reported payrolls as on January 1, 1929 and 1928. Employment in recent months has been maintained at an exceptionally high level, so that many employers took advantage of the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. In spite of these losses, the situation continued better than on the corresponding date in any other year since the record was instituted. The Dominion Bureau of Statistics tabulated returns from 7,063 firms whose payrolls declined from 1,037,259 persons on December 1, to 967,540 at the begining of January. Reflecting this contraction, the index (based upon the 1926 average as 100) stood at 111.2 on January 1, 1930, as compared with 119.1 in the preceding month, and with 109.1, 100.7, 95.9, 90.7, 84.9, 89.8, 87.3, 78.8 and 88.8 on the same date in 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All except the Maritime Provinces recorded declines, those in Quebec and Ontario being most extensive. In the Maritime provinces, the increase took place chiefly in transportation, and was due to the opening of the winter ports. On the other hand, manufacturing and construction showed seasonal curtailment. In Quebec, manufacturing, construction and transportation reported especially pronounced losses, but the trend was also unfavourable in logging, mining and trade, while improvement was noted in communications and services. In Ontario, manufacturing, construction and transportation registered the greatest losses, but logging and communications recorded advances, and retail trade, though not at the pre-Christmas peak, was nevertheless considerably busier than at the beginning of December. In the Prairie provinces, construction reported the most noteworthy decrease, but transportation, manufacturing, mining and trade were also slacker. On the other hand, telephone communications and logging indicated increased activity. In British Columbia, lumber mills, logging and construction recorded important curtailment, while there were smaller losses in food and other factories and in mining, transportation and trade.

There were contractions in each of the eight cities for which separate tabulations are made, firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver reporting reduced employment. In Montreal, important declines were noted in construction, transportation and manufacturing. In Quebec, manufactures, shipping and construction reported losses in employment. In Toronto, there were contractions in manufacturing and also in construction, services, and transportation, but trade and communications showed improvement. In Ottawa, manufactures and construction indicated seasonal curtailment, while transportation afforded greater employment. In Hamilton, manufacturing, construction and shipping showed reduced activity. In Windsor and the Adjacent Border Cities, manufacturing and construction were dull. In Winnipeg, manufactures and construction registered the greatest declines, but trade was also slacker, while communications showed improvement. In Vancouver, employment in manufactures, construction and trade showed a falling-off since the preceding month.

An analysis of the returns by industries shows important contractions in manufacturing, construction, transportation, logging, mining, services and trade, while communications recorded gains.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1930.

TRADE UNION REPORTS. Factors largely responsible for the depression indicated by local trade union members during November, namely, the short harvest in the western provinces and the resulting curtailment of grain transportation, the seasonal quietness in building and construction operations, and slackness in the Quebec garment trades, also influenced the situation throughout December, and together with the customary shut downs in a number of establishments toward the close of the year both for holiday and inventory purposes caused an unemployment percentage of 11·4 at the end of the month, contrasted with 9·3 per cent of idle members in November. This December percentage was based on the returns tabulated by the Department of Labour from a total of 1,790 local unions with a membership aggregate of 213,065 persons, 24,201 of whom were idle on the last day of

the month. That the unemployment percentage for December rose from 6·6 per cent in the same month of 1928 to its present level is accounted for largely by the fact that the situation prevailing for both railway and garment workers, as mentioned above, was exceptional this year. New Brunswick unions alone reported nominal improvement in conditions during December over the previous month, while in all other provinces reductions in the employment volume afforded were indicated, the most noteworthy of which were apparent among Ontario unions. Further seasonal contractions were reported in building and construction operations by practically all provinces during the month under review. Each province shared to some extent in the downward employment shown in comparison with December, 1928.

A review in greater detail of unemployment at the close of December as indicated by trade unions is printed elsewhere in this issue.

Employment Office Reports.

During the month of December, 1929, the Offices of the Employment Service of Canada made 28,679 references of persons to positions and effected a total of 27,811 placements. Of these, placements in regular employment numbered 14,958 of which 12,129 were of men and 2,829 of women, while placements in casual employment numbered 12,853. The offices of the service also received notification of 28,762 vacancies during the period under review, of which 21,019 were for men and 7,743 for women, a total of 42,695. Applications for employment were registered from 33,215 men and 9,480 women. Compared with the preceding month and also with December a year ago, an increase was shown in the volume of business transacted, the records for November 1929, showng 26,984 vacancies offered, 42,685 applications made and 25,976 placements effected, while in December, 1928, there were recorded 23,708 vacancies, 31,926 applications for work and 22,529 placements in regular and casual employment. In another section of this issue will be found a detailed statement of the work of the offices for the month of December, 1929, and also for the quarterly period September to December.

Building Permits and Contracts Awarded.

According to a report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during December, 1929, was $15,585,992, as compared with $16,166,385 in the preceding month and with $16,095,160 in December, 1928.

The *Maclean Building Review* states that the contracts awarded for January totalled $37,529,900, which was an increase over December last of 15 per cent, a decrease from January a year ago of 10·5 per cent, but an increase over January, 1928, of 83·2 per cent. Of the January 1930 total $22,731,400 was for engineering purposes; $7,978,600 was for business buildings; $3,597,400 was for residential buildings, and $3,222,500 was for industrial buildings. The apportionment of the contracts awarded during January by provinces was as follows: Quebec, $21,216,700; Ontario, $6,721,300; British Columbia, $5,477,800; Alberta, $1,630,400; New Brunswick, $1,296,700; Manitoba, $646,900; Saskatchewan, $409,600; Nova Scotia, $116,500; Prince Edward Island, $14,000.

Production and Trade

Industrial Production.

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 113.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that notwithstanding the marked drop in production during the last quarter of 1929, a new high record in the volume of Canadian production was reached during the year. Considerable expansion was shown in mining, gains being general in the output of each of the major metals and minerals except lead and coal. The production of copper was 20 per cent greater, exports during the calendar year showing an increase of even greater amount. The value of mineral production in 1929, estimated at nearly $304,000,000, was more than 10 per cent greater than in the preceding year.

In general manufactures, the gain in some of the larger industries was extremely spectacular. The automobile industry produced 9 per cent more units in 1929 than in the preceding year. The increase of 14.7 per cent in crude rubber imports and of 11.5 per cent in the imports of crude petroleum, indicate the active condition which obtained in industries allied to motor car production. The value of construction contracts awarded during 1929 showed a gain of 22 per cent and building permits issued in sixty-one cities were 7.5 per cent greater. The iron and steel group, favoured by active conditions in the automobile, construction and railway equipment industries, operated at a high level, the production of steel ingots and castings being 11 per cent greater, and pig iron output show-

ing a gain of 5 per cent. Though the price structure was unsatisfactory, the paper industry exceeded all preceding records in the volume of production, the gain in the output of newsprint over 1928 being 14.4 per cent. Owing mainly to a subnormal grain crop, curtailment was shown in carloadings and in the value of merchandise exported.

Though the total production for the year reached unprecedented totals in most industries, considerable variation was shown in different months. Adjustment being made for seasonal tendencies, the first half of the year was the most active. After midyear a moderate decline was in evidence, which during the last quarter developed into a reaction of considerable proportions. Marked curtailment was evident in December, though the index of employment as of January, showed that the reduction in working forces in December was normal for the month.

EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in December, 1929, the merchandise entered for consumption amounted to $84,365,155 as compared with $108,733,697 in the preceding month and with $94,620,925 in December, 1928. The chief imports in December 1929 were: Iron and its products, $16,287,786; non-metallic minerals and products, $13,283,790; Fibres, textiles and textile products, $11,599,635.

The domestic merchandise exported during December, 1929, amounted to $88,520,355 as compared with $111,068,332 in November, 1929 and with $130,847,423 in December, 1928. The chief exports in December, 1929, were: Agricultural and vegetable products, mainly foods, $27,882,648; Wood, wood products and paper, $22,566,291; Non-ferrous metals and their products, $12,003,115.

Strikes and Lockouts

The time loss due to industrial disputes in January, 1930, was slightly less than that occurring in December, 1929, only four disputes being in existence during the month. As compared with January, 1929, the figures for January, 1930, show that while fewer strikes occurred, over twice as many workers were involved, causing a time loss only slightly lower than that occurring during the same month last year. There were in existence during the month four disputes, involving 1,949 workers and resulting in a time loss of 7,610 working days, as compared with seven disputes in December, involving 1,684 workers and resulting in a time loss of 12,979 working days. In January, 1929, there were on record seven disputes, involving 794 workers and resulting in a time loss of 8,319 working days. At the end of the month there were on record two disputes involving approximately 2,000 workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was slightly higher at $11.88 for the beginning of January, as compared with $11.83 for December, 1929; $11.30 for January, 1929; $11.19 for January, 1928; $11.37 for January, 1927; $11.63 for January, 1926 $10.77 for January, 1925; $10.73 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $12.42 for January, 1918; and $7.73 for January, 1914. The prices of beef, veal, mutton, fresh pork, milk and potatoes were higher, while slight decreases occurred in the prices of bacon, lard, fresh eggs, cheese, bread, rolled oats and beans. Including the cost of fuel and rent with that of foods the total budget averaged $22.17 at the beginning of January, as compared with $22.11 for December, 1929; $21.55 for January, 1929; $21.41 for January, 1928; $21.59 for January, 1927; $21.96 for January, 1926; $21.09 for January, 1926; $21.23 for January, 1924; $21.13 for January, 1923; $21.52 for January, 1922; $25.30 for January, 1921; $26.92 for July, 1920 (the peak); $19.61 for January, 1918; and $14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower at 95·6 for January, as compared with 96·2 for December, 1929; 93·7 for January, 1929; 96·9 for January, 1928; 97·8 for January, 1927; and 103·0 for January, 1926. In the grouping according to chief component materials one of the eight main groups advanced, six were lower and one was unchanged. The Animals and their Products group advanced, due mainly to higher prices for live stock and storage eggs. The groups which declined were: the Vegetables and Vegetable Products group, due mainly to lower prices for grains, rubber, coffee and tea; the Textile and Textile Products group, due to decreases in the prices of jute, hessian, sisal, raw wool and wool fabric;

the Wood, Wood Products and Paper group, due chiefly to lower prices for lath and certain lines of lumber; the Iron and its Products group, due to lower prices for steel plates, steel sheets and wire cloth; the Non-Ferrous Metals and their Products group, because of lower quotations for silver, antimony, tin and zinc; and the Chemicals and Allied Products group, because of lower prices for carbon black, shellac, creosote oil and hemlock extract. The Non-Metallic Minerals and their Products group was unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JANUARY, 1930

DURING the month of January the Department of Labour was informed by the Clerk of the city of Winnipeg that the City Council on January 20 had given consideration to the matter of the application for the establishment of a Board of Conciliation and Investigation submitted to the Minister of Labour by employees of the Winnipeg Hydro-Electric System, being members of the Hydro and Mechanical Workers' Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg. The City Clerk stated that the City Council had passed two resolutions on the subject, the first agreeing to allow the dispute to be referred to a board, and the second appointing a committee to name a person for appointment as board member on the city's behalf. The nomination of the city's representative had not been received at the close of the month.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1930

THE number of strikes and lockouts in existence in Canada during January was four, as compared with seven the preceding month. The time loss for the month was also less than during December, but the number of workers involved was greater, owing to a strike of women's clothing factory workers in Toronto, which occurred late in January, involving approximately 2,000 workers. Compared with January, 1929, the figures for January, 1930, show that while fewer strikes occurred, over twice as many workers were involved, causing a time loss only slightly less than that occurring last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
*January, 1930.....	4	1,949	7,610
December, 1929.....	7	1,684	12,979
January, 1929.....	7	794	8,319

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

No disputes were carried over from December, but four disputes commenced during January, two of which terminated during the month, one in favour of the workers, the result of the other being recorded as a compromise. At the end of January, therefore, there were two disputes recorded as strikes or lockouts, as follows: boot factory workers, Montreal, P.Q., and women's clothing factory workers, Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; photo engravers, Toronto, Ont., January 7, 1929, one employer; and moulders, Lachine, P.Q., May 2, 1929, one employer.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

COAL MINERS, SPRINGHILL, N.S.—Five contract miners ceased work in the collieries on January 9 objecting to a change in working conditions which they claimed should not have been made until mutually agreed to between the committee of the union and the management, under the terms of the agreement between the company and the union. The mine was then closed down for two days, involving

277 employees. The management claimed that when arrangements were made for the working of this place it was stipulated that the company should have the right to put more men on, the point in question. Officers of the union discussed the matter with the management and the employees returned to work under an arrangement to give the new system a thirty days' trial, the company undertaking to take away all the coal produced.

BOOT FACTORY WORKERS, MONTREAL, P.Q.—When a boot and shoe manufacturing company signed a closed shop agreement with Boot and Shoe Workers' Union, and notified the employees that only members of such union would be retained on the staff, a number of the workers, members of the National Catholic Union of Shoe Workers, gave up their employment on January 23, claiming that seventy-five per cent of the workers in the establishment were members of this union. An application for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was forwarded to the Minister of Labour on January 27. As a Board could be established in this industry only with the consent of the employer, the case was under consideration at the end of the month.

WOMEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—A number of employees in a women's clothing factory in Montreal ceased work on Saturday, January 11, alleging discrimination against a union employee. The employer reported that the union organizer attempted to organize the establishment and threatened the workers, as a result of which he was arrested. On January 27 work was resumed, the employer having given certain increases in wages, a reduction in hours from forty-nine per week to forty-hour, and reinstated the union employee.

WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—Employees in a number of women's clothing factories in Toronto ceased work on January 28 to secure a union agreement providing for a minimum wage of $1 per hour, improved working conditions, the elimination of sweat shops, a working week of forty-four hours and no work on Sundays. An agreement between the International Ladies' Garment Workers' Union and the Toronto Cloak Manufacturers' Protective Association to run from January 17, 1925, to January 17, 1928, having expired (LABOUR GAZETTE, June, 1925, page 619), the factories had been operated to a great extent under non-union conditions since that time. The employers having refused to negotiate with the union, following a vote on January 27, employees ceased work on the following day. At the end of the month no settlement had been reported.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1930

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(*a*) Strikes and Lockouts in Progress prior to January, 1930.			
None.*			
(*b*) Strikes and Lockouts Commencing during January, 1930.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Springhill, N.S..	277	554	Commenced Jan. 9,1930, against changes in working conditions alleged to be in violation of agreement. Terminated Jan. 11, 1930. Compromise.
MANUFACTURING—			
Boots and Shoes (other than rubber and felt)—			
Boot factory workers, Montreal, P.Q.....	52	416	Commenced Jan. 23, 1930; employment of members of one union only. Unterminated.
Clothing (including knitted goods)—			
Women's clothing factory workers, Montreal, P.Q...	20	240	Commenced Jan. 11, 1930; discrimination against a union employee. Terminated Jan. 27, 1930; in favour of workers.
Women's clothing factory workers, Toronto, Ont.....	1,600	6,400	Commenced Jan. 28, 1930; for union agreement. Unterminated.

*Except disputes by which employment conditions are no longer affected, but which the unions concerned have declared unterminated.

RECENT STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month. A table is given on page 141 summarizing the principal statistics as to strikes and lockouts from 1919 as far as possible to date.

Great Britain

Preliminary figures for the year 1929 were published in the *Ministry of Labour Gazette* for January. The number of disputes beginning in the year was 420 and 8 were still in progress from the previous year. The number of workpeople involved in all disputes in progress in this period was 532,100, of whom 491,500 were directly involved; the time loss was 8,283,000 working days. Nearly 80 per cent of this total time loss was due to the dispute in the Lancashire cotton industry.

The table given below shows the disputes for the year classified by industries:

INDUSTRIAL DISPUTES IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1929

Industry Group.	Number of disputes beginning in 1929.	Number of workpeople involved in all disputes in progress.	Aggregate duration in working days of all disputes in progress.
Coal mining	151	77,700	575,000
Other mining and quarrying	9	1,200	90,000
Brick, pottery, glass, etc.	10	500	6,000
Iron and steel	6	2,500	53,000
Engineering	18	20,000	62,000
Shipbuilding	25	8,100	530,000
Other metal	30	7,700	120,000
Textile	58	400,000	6,757,000
Clothing	17	1,600	11,000
Woodworking, furniture, etc.	15	1,300	14,000
Paper, printing, etc.	2	400	20,000
Building, public works contracting, etc.	36	3,000	23,000
Transport	21	7,200	13,000
Commerce, distribution and finance	5	300	3,000
Other	17	600	6,000
Total	420	532,100	8,283,000

The number of disputes beginning in December was 17, and 15 were still in progress from the previous month, making a total of 32 disputes in progress during the month, involving 5,900 workpeople and resulting in a time loss of 41,000 working days. Of the 17 disputes beginning in December, 6 arose out of proposed reductions in wages, 4 on other wages questions, 3 on questions of trade union principle and 4 on other questions. Settlements were reached in 21 disputes, of which 4 were in favour of workpeople, 12 in favour of employers and 5 ended in compromises. In 3 other disputes, work was resumed pending negotiations.

United States

The number of disputes beginning in November was 45, and 55 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 12,658 and the time loss 317,846 workings days.

Workmen's Compensation Awards in Ontario in 1929

During 1929 the Workmen's Compensation Board awarded $8,120,157.78 of which $1,385,524.62 was for medical aid. The total awarded in 1928 was $7,067,946.93 with $1,166,507.54 for medical aid. This shows a large increase in 1929, but when speaking at the 1929 Convention of the Industrial Accident Prevention Associations at Windsor, Mr. V. A. Sinclair, K.C., Chairman of the Workmen's Compensation Board, pointed out that there had been an increase of fourteen per cent in the payroll in the former year and an increase of eleven per cent in payment for compensation. If the year 1929 showed the same ratio, it is reasonable to assume that accident prevention work is showing some progress. The total number of accidents reported by industry in Ontario to the Workmen's Compensation Board in 1929 was 87,103 which included 510 fatalities. There were 79,398 reports in 1928 including 553 fatalities, so that there is a slight improvement in this latter respect. Statistics compiled by the Industrial Accident Prevention Associations, covering the larger firms in the membership, indicate a general reduction in accident frequency, and those interested in accident prevention claim that accident frequency is a surer guide than severity.

In December, 1929, the Board awarded $668,723.09 and received reports on 6,288 accidents, including 51 fatalities.

The Program Committee of the Industrial Accident Prevention Associations announces that the 1930 Safety Convention will be held at the Royal York Hotel, Toronto, on April 24 and 25.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1929

Annual Review of Industrial Disputes

DURING 1929 the number of strikes and lockouts in Canada was relatively small, as was the case during each year since 1921, being ninety, a decrease of eleven from the number recorded for 1928, while the number of employers and workers involved, as well as the time loss, were much lower than in any year since 1915. As in each year since 1924, the year was marked by the absence of disputes involving large numbers of employees, and also by the brief duration of those which did occur. The dispute of greatest magnitude was that involving pulpwood cutters in the vicinity of Port Arthur, Ont., involving eight hundred workers, lasting fifty-six days and causing a time loss of about 22,000 days, whereas the most important dispute during 1928 was that involving 1,200 coal miners at Wayne, Alberta, causing a time loss of 51,000 days during 1928, terminating early in 1929, with a further time loss of 10,000 days. Other important disputes were: cotton factory employees at Hamilton, Ont., 700 workers, lasting 28 days, 15,000 days' time loss; carpenters at Montreal, 1,000 workers, 10 days, 10,000 days' time loss; steel car riveters at Hamilton, Ont., 280 workers, 38 days, 10,400 days' time loss; painters, Toronto, Ont., 600 workers, 38 days, time loss 7,800 working days; plumbers, Toronto, Ont., 400 workers, 19 days, 7,500 days' time loss; and plasterers, Toronto, Ont., 500 workers, 12 days, 6,000 days' time loss. The industries chiefly affected by disputes were construction, which had about one-third of the disputes occurring during the year and also about one-third of the total time loss (as was the case in 1928); and manufacturing which also had about one-third of the total time loss for the year, but over forty per cent of the disputes. Logging experienced one-sixth of the time loss for the year, having three disputes, while mining had only about ten per cent of the total time loss due to ten brief disputes.

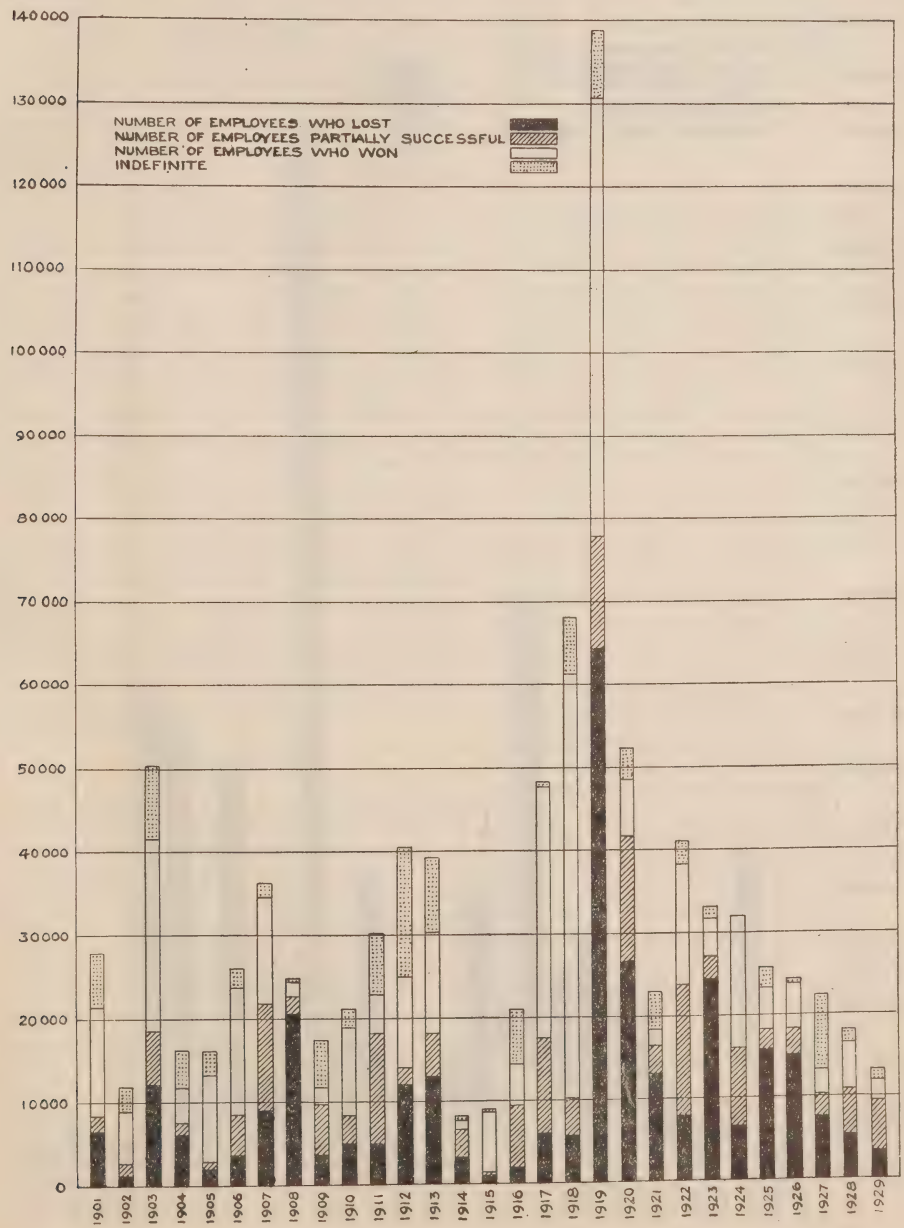
TABLE I.—RECORD OF STRIKES AND LOCKOUTS BY YEARS

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Workers involved	Time loss in working days
1901	104	104	273	28,086	632,311
1902	121	121	420	12,264	120,940
1903	146	146	927	50,041	1,226,500
1904	99	99	575	16,482	265,004
1905	89	88	437	16,223	217,223
1906	141	141	1,015	26,050	359,797
1907	149	144	825	36,224	621,962
1908	68	65	175	25,293	703,285
1909	69	69	397	17,332	871,845
1910	84	82	1,335	21,280	718,635
1911	99	96	475	30,094	2,046,650
1912	150	148	989	40,511	1,099,208
1913	113	106	1,015	39,536	1,287,673
1914	44	40	205	8,678	430,054
1915	43	38	96	9,140	106,149
1916	75	74	271	21,157	208,277
1917	148	141	714	48,329	1,134,970
1918	196	191	766	68,489	763,341
1919	298	290	1,913	138,988	3,942,189
1920	285	272	1,273	52,150	886,754
1921	145	138	907	22,930	956,461
1922	85	70	569	41,050	1,975,276
1923	91	77	419	32,868	768,494
1924	73	63	415	32,494	1,770,825
1925	83	81	510	25,796	1,743,996
1926	77	73	598	24,142	296,811
1927	79	72	652	22,683	165,288
1928	101	97	726	18,239	238,132
1929	90	88	243	12,924	154,936
Total	3,345*	3,214	19,135*	939,473*	25,718,012

*In these tables figures for disputes extending over the end of a year are counted more than once.

Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

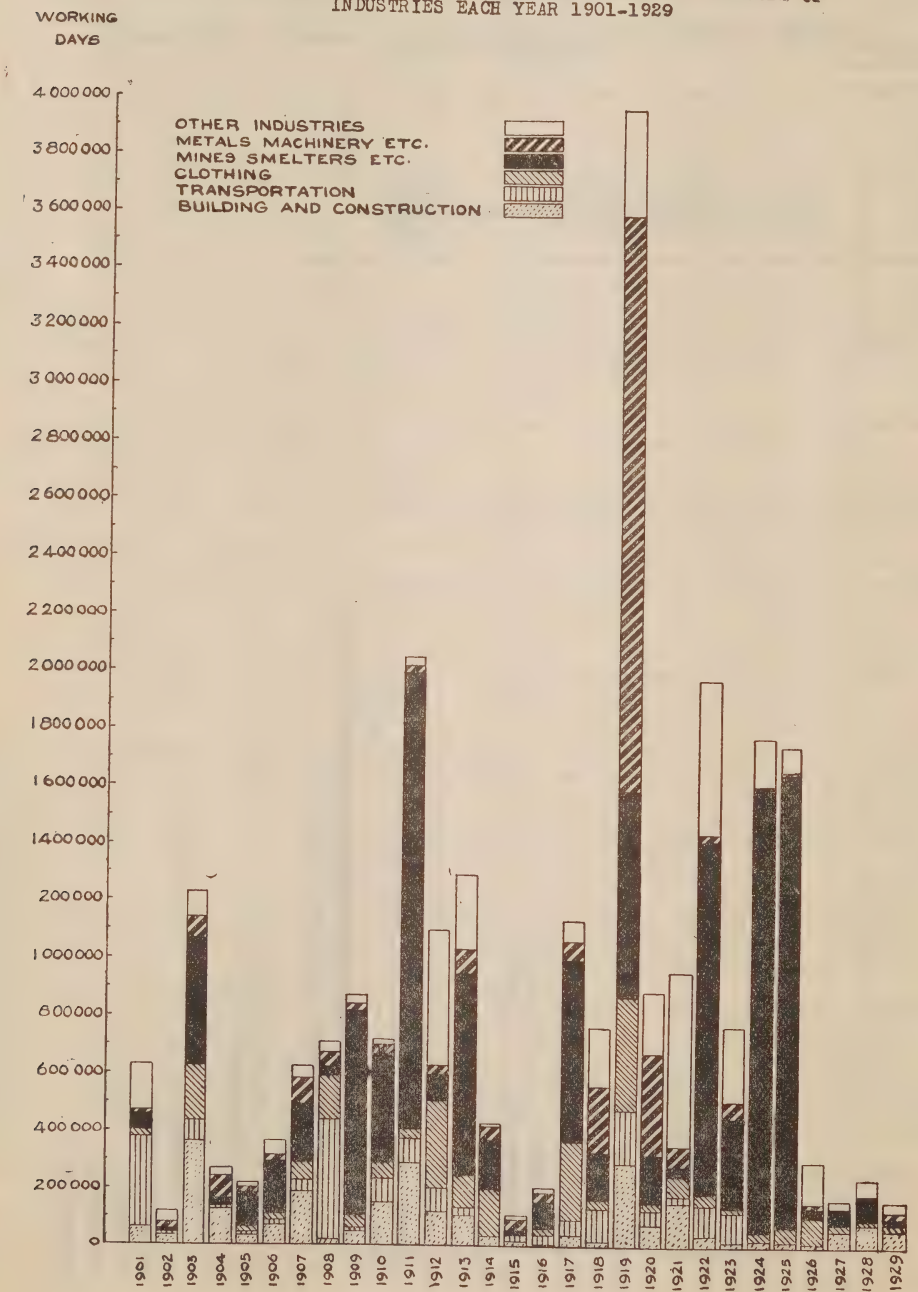


The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and

disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the LABOUR GAZETTE at the time of their occurrence. During 1929 there were ten such disputes, involving 174 employees, making a time loss of 41 working days.

The figures in this report are inclusive of all disputes which come to the knowledge of



RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF EMPLOYEES INVOLVED IN 1901-1929

99633—2½

the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. So far as concerns figures given with respect to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the

LOSS IN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-1929

subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known. The number of employees recorded for each dispute is the number of those directly affected that is on strike or locked out and does not include those indirectly affected. In recent years, when the information is available, the number indirectly involved has been shown in footnotes. None, however, were recorded for 1929.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. In addition to the list in Table 10 information is available as to the following disputes of this nature carried over from 1928: electrotypers, Toronto, Ont., Dec. 20, 1926; bakers, Montreal, P.Q., May 1, 1927, declared off May 9, 1929; stonecutters, Montreal, P.Q., June 10, 1927, lapsed during May, 1929; sheet metal workers, Montreal, P.Q., Sept. 1, 1927, declared off May 7, 1929; and shoe factory workers, Toronto, Ont., Aug. 13, 1928, lapsed April 23, 1929. The strike of fur workers in Toronto, Ont., April 10, 1928, recorded as terminated August 15, 1928, was carried in this list until September, 1929. The strike of plumbers in Kingston, Ont., April 2, 1928, has been recorded as terminated at the end of 1928 and transferred to this list. Also during 1929 the following disputes included in Table X were added: photo engravers, Toronto, Ont., Jan. 7, 1929; and moulders, Lachine, P.Q., May 2, 1929.

Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1903, 1909, 1910, 1911 and 1913, and again in 1917, 1919, 1922, 1924, 1925 and 1928 (the figure for 1929 being comparatively small). In metal trades no great time loss appeared except in 1919, when the strikes in the metal trades in various cities and the general strike in Winnipeg in sympathy with the metal trades' strike there, caused a time loss of about two million days. In 1918, 1920 and 1923, however, the time losses (in these trades) were larger than in other years, while in 1929 the time loss was approximately ten times as great as that in 1928. In building and construction considerable time loss appeared in 1903, 1907, 1911, 1919, 1928 and 1929. In transportation there was considerable time loss only in 1901, due to a strike of trackmen; in 1908, due to a strike of railway shop machinists; and in 1918 and 1919 due to numbers of strikes in street railway operation, as well as among freight handlers, in local transportation, cartage, etc. The item "other industries" for 1926 included a comparatively large time loss in boot and shoe manufacturing.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1903, 1915, 1917, 1918 and 1929, but were unsuccessful in 1908, 1919, 1923, 1925 and 1926.

The following notes deal with the chief features in strikes and lockouts during the year 1929:

Logging.—The three strikes in this industry occurred in Northern Ontario in January, June and October respectively, the first involving tie cutters and the others pulpwood cutters. The strike in October was protracted until December and resulted in more time loss than from any other dispute during the year. The dispute was due to demands for wage increases and spread from one logging camp to another, the strikers being replaced and seeking work elsewhere, or returning to work, in each camp within a relatively short time.

Mining.—Of the ten strikes beginning or in progress during the year, eight were in coal mining, and only four caused an appreciable amount of time loss and only one lasted more than a few days, namely that at Wayne, Alberta, carried over from 1928. In this dispute, out of approximately 12,000 miners involved at the beginning in five collieries, at the end of 1928 there were 250 involved, an agreement having been reached in one colliery, the others resuming work with partial crews. Early in 1929 in two other collieries the dispute was settled, one conceding the demands of the union, the Mine Workers' Union of Canada, in full. By the end of February the operators of the other two mines had signed agreements with the United Mine Workers of America, providing for the working conditions recommended by the Board of Conciliation appointed under the Industrial Disputes Investigation Act (Labour Gazette, August 1928, pages 827-832), which the operators had agreed to accept. The other strikes in coal mining during 1929 were of short duration and arose out of disputes as to conditions in particular mines. Two strikes of gold miners in Yukon Territory occurred owing to a delay in the payment of wages, work being resumed when the demands of the workers were met.

MANUFACTURING.—Over half of the time loss in this industry was due to two strikes in Hamilton, Ont. A strike of cotton factory workers began on January 30, and lasted until March 4, due to a change in production methods under which each spinner was to tend more machines although relieved of certain duties. During the dispute the workers were organized by the United Textile Workers of America. Conciliation was attempted but no settlement was reached, and the strikers began to return to work, the dispute terminating by March 4. A strike of steel car rivetters began on September 4 owing to the failure of a demand for higher piece rates on a new type of work, the workers demanding the same rates as on a previous job. The management claimed that owing to the new production methods earnings would be as good as on the previous work. The strikers were organized into the National Car Workers' Industrial Union. Conciliation was attempted but no settlement was reached, and the strikers being partially replaced or returning to work gradually, the dispute was terminated by October 18. In this dispute there were some arrests and some convictions of strikers for intimidation, etc.

Most of the other disputes in manufacturing industries were of brief duration or involved relatively small numbers of employees, a number of the strikes being to secure or maintain union conditions and a number in connection with piece rate wages.

CONSTRUCTION.—Most of the disputes were to secure increases in wages and in some cases reductions in hours, many wages increases being effected, while on the hours question compromises were in many cases reached. The strikes involving large numbers of workers were those of labourers and carpenters near Murray Bay, P.Q., March 6; painters at Montreal, P.Q., April 1; carpenters at Montreal, April 24; painters at Toronto, May 1; plumbers at Toronto, May 1; plasterers at Toronto, May 1, involving plasterers' labourers in a sympathetic strike. All of these, except that of plumbers at Toronto, were to secure increases in wages. The strike of plumbers at Toronto was against employers who did not join an employers' association with which the union had signed an agreement providing for employment of union members only, and that union plumbers would work only for members of this employers' association. Through the mediation of the Minister of Labour it was arranged that another employers' association should be formed which would not include among its objects certain practices which some of the employers held were not only objectionable but illegal, and that the union would sign a new agreement with this association, the object of which would be to deal with employment relations only and membership in which would be open to all Toronto master plumbers.

TRANSPORTATION.—The three disputes involved small numbers of workers: on a steam railway maintenance of way near St. Thomas, Ont.; on the street railway at Winnipeg; at Vancouver, where toward the end of the grain shipping season ship liners' helpers came out during a strike of shipwrights, etc., also demanding an increase in wages, the dispute being unsettled and lapsing at the end of the season.

TRADE.—A strike of milk wagon drivers at London, Ont., for a union agreement to secure changes in conditions as to collecting accounts was partially successful, some of the employers agreeing to this.

FINANCE.—A strike of telegraph operators in a broker's various offices to secure the operation of automatic machines for Morse operators was unsuccessful, the strikers being replaced. A similar strike in the offices of this firm in the United States occurred at the same time.

SERVICE.—Three strikes occurred in an Ottawa theatre to maintain union conditions, one in the spring being successful, the other two being recorded as indefinite when the theatre closed down. In the meantime the strikers had been replaced. A strike of carpenters on the maintenance staff of an hotel in Toronto for an increase in wages was unsuccessful, the strikers being replaced.

TABLE II.—STRIKES AND LOCKOUTS, 1929, BY NUMBER OF EMPLOYEES INVOLVED

Number of workers involved	Disputes		Number involved	Time loss	
	Number	Percent of total	Workers	Working days	Percent of total
1,000 and over	2	2·2	2,200	12,400	8·0
500 and under 1,000	7	7·8	4,800	66,010	42·6

in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. It will be observed that since 1904, except in 1906 and 1909, a small number of disputes was carried over each year. In the columns showing numbers of workers involved and time loss in man working days, relatively large numbers appear in certain years when coal mining disputes of a widespread and prolonged nature occurred. The chart showing time loss by industries from 1901 to 1929 indicates that coal mining disputes account for a very large percentage of the time loss in most of the years. This has not been the case since 1925, and the year 1929 was unusually free from such disputes, one carried over from 1928 being the only one of importance.

Table II, giving an analysis by number of workers involved, shows that the great majority of the disputes involved small numbers of workers, as in 67.7 per cent there were less than one hundred workers involved. The bulk of the time loss for the year, 42.6 per cent, was caused by disputes involving 500 to 1,000 workers. There were few disputes during the year involving a large number of workers, only two disputes involving over 1,000 workers, and these were of short duration, accounting for but 8 per cent of the time loss.

Table III, giving an analysis by time loss in man working days, shows that 52 per cent of the time loss was caused by 6.7 per cent of the total number of disputes, each of which caused between 10,000 and 25,000 working days time loss. These disputes also involved a large number of workers, about 30 per cent of the total number involved during the year.

Table IV, giving an analysis by duration or number of days in progress, shows that 42.2 per cent of the disputes were under five days, 71.2 per cent under fifteen days, and that these involved 8,133 workers out of a total of 12,924 for the year. The disputes lasting over thirty days amounted to 16.7 per cent of the total number and caused 46.2 per cent of the time loss for the year.

Table V, giving an analysis by provinces, shows that 44.5 per cent of the disputes occurred in Ontario and caused 58.6 per cent of the time loss for the year and involved between a third and a half of the workers. Quebec was next in the number of disputes, workers involved and amount of time loss, while British Columbia was third in the number of disputes although Nova Scotia had a larger number of workers involved and Alberta had a slightly larger amount of time loss. No disputes for New Brunswick or Prince Edward Island were recorded, and this had been the case in 1928 also. One dispute was recorded as Interprovincial, a strike involving a small number of telegraph operators at Montreal, Toronto, and Vancouver. Two strikes of gold miners in the Yukon were recorded.

Table VI, giving an analysis by industries, shows that building, logging, iron and steel manufacturing, mining, and textiles accounted for 36.4 per cent, 16.6 per cent, 11.3 per cent, 10.3 per cent, and 9.7 per cent of the time loss respectively. Building also accounted for nearly one-half of the workers involved, while mining had over 3,000 workers or 25 per cent, and logging 1,000 about 8 per cent, involved in disputes respectively. In building there were not only numerous disputes, but several involved large numbers of workers for a considerable period. In logging, however, most of the time loss was caused by one dispute in the Port Arthur and Pigeon River district in which there was a time loss of 22,000 working days.

Table VII, giving an analysis by causes and results, shows that over one-third of the disputes were for increases in wages. Nine of these resulted in favour of workers, eleven in favour of employers, ten resulted in the workers being partially successful, and one was indefinite. Decreases in wages caused seven disputes, while demands for increase in wages and shorter hours or other changes caused seven disputes. Of these fourteen disputes the workers won three, lost one, partially won six, and four were indefinite in result. Sixteen disputes were due to other causes affecting wages and working conditions. Of these the workers won six, lost seven, partially won two and one was indefinite. Among causes arising out of union questions the securing or maintenance of union wages and working conditions was important and caused ten disputes. Among these, chiefly in the clothing trades, the workers were successful in six, unsuccessful in two, and partially successful in two. Discharge of workers caused nine disputes in which workers were successful in two, unsuccessful in five and two were indefinite. Considering all disputes by results, the workers won twenty-seven, lost thirty, were partially successful in twenty-two, and eleven were indefinite.

Table VIII, giving an analysis by methods of settlement, shows that thirty-four out of ninety disputes were settled by direct negotiations between the parties, twelve were settled by conciliation, two were referred to arbitration, and one by reference to a board under the Industrial Disputes Investigation

*These figures relate only to the actual number of disputes in existence and the workers involved during the year, not being a summation in each case of the monthly figures.

TABLE X.—DETAILED LIST OF STRIKES AND LOCKOUTS IN CANADA, 1929

Industry or occupation	Locality	Cause or object	Method of settlement or termination	Result	Date of commencement	Date of resumption of work	Number involved		Time loss in working days	Duration in working days
							Employers(h)	Workers		
Logging—										
Tie cutters, teamsters and skidders.	Onion Lake, Ont. (Near Port Arthur).	For increase in wage rates from $26-$30 to $50 per month and from 12½c.-14c. to 15c. per tie, skidding ½c. extra.	Return of workers..	Compromise; increase to $35-$45 per month with board, 14c. per tie, 2½c. for skidding as before.	Jan 26.....	Mar. 4.....	1	200	3,500	31
Pulpwood cutters.....	South Porcupine, Ont.	For increase in wages from $4-$4.25 per cord to $4.50-$4.75.	Negotiations.....	In favour of workers	June 17.....	June 20.....	2	75	225	3
Pulpwood cutters and camp workers.	Port Arthur and Pigeon River district, Ont.	For increase in wages from $40 to $50 per month and in piece rates from $4 to $5 per double cord.	Replacement and return of workers.	In favour of employers.	Oct. 14.....	Dec. 18.....	3	800	22,000	56
							6	1,075	25,725	
Mining, Non-ferrous Smelting and Quarrying—										
Coal miners.....	Wayne, Alta.....	For recognition of union and against payment per ton for screened coal instead of run of mine.	Negotiations.....	Partially successful; three of the companies signed an agreement with union, one granting run of mine basis of payment.	Aug. 13, 1928.	Mar. 1, 1929	4	250	10,000	50
Coal Miners.....	New Waterford, N.S.	For reinstatement of shot firer discharged for misconduct.	Return of workers..	In favour of employer.	April 2.....	April 3.....	1	50	50	1
Gold miners.....	Vicinity of Dawson City, Yukon.	Against delay in payment of wages.	Indefinite.....	In favour of workers	May 17.....	May 20.....	1	10	20	2
Coal miners.....	Glace Bay, N.S....	Against double shifting on certain pillar work.	Negotiations.....	Compromise; pillars to be worked on single shift, men to follow their own shift, working days one week and nights the next.	May 29.....	May 31.....	1	1,200	2,400	2
Gold miners.....	Vicinity of Dawson City, Yukon.	Against delay in payment of wages.	Indefinite.....	In favour of workers	June 17.....	June 18.....	1	60	60	1
Coal miners.....	Westville, N.S.....	Against change of working place for a certain driver.	Negotiations.....	In favour of employer.	July 10.....	July 11.....	1	45	45	1
Coal miners.....	Glace Bay, N.S.....	For change of place for boy worker.	Return of workers..	In favour of employer.	Aug. 21.....	Aug. 23.....	1	400	460	2

Coal miners	New Waterford, N.S.	Against suspension of boy for disobedience.	Return of workers	In favour of employer.	Aug. 31	Sept. 6	1	300	1,200	4
Coal miners (boys)	Springhill, N.S.	Against suspension of boy pending investigation.	Return of workers	In favour of employer.	Nov. 22	Nov. 23	1	50	50	1
Coal miners	New Waterford, N.S.	Transfer and replacement of two employees.	Return of workers	Indefinite, pending inquiry.	Dec. 17	Dec. 20	1	750	1,600	3
							13	3,115	15,885	
MANUFACTURING—										
Vegetable Foods—										
Biscuit packers	Calgary, Alta.	Against suspension of worker.	Replacement	In favour of employer.	June 14	June 17	1	6	12	2
Bakers	Montreal, P.Q.	Alleged lockout to prevent unionization.	Arbitration	Indefinite (g)	Sept. 7	Sept. 29	7	57	1,000	19
							8	63	1,012	
Tobacco and Liquors—										
Cigar factory workers	Toronto, Ont.	In sympathy with forelady who quit work claiming the machines were inefficient.	Replacement	In favour of employer.	Dec. 6	Dec. 10	1	23	60	3
							1	23	60	
Rubber Products—

(a) Union called strike off September 23 when firm failed; most of strikers had secured work elsewhere by July.
(b) Union had not called strike off at end of year.
(c) In the strike of plumbers in Kingston, Ont., commencing April 2, 1928, recorded as unterminated in the annual review for 1928, employment conditions were substantially unaffected by the end of that year.
(d) Or the alternative of a return to England at the company's expense.
(e) To secure terms of agreement signed with certain other employers.
(f) Increase secured.
(g) Arbitration did not materialize.
(h) The number of employers is not always ascertainable, particularly in construction.

Continued from page 126

Act. In the other disputes the workers returned without negotiations in seventeen cases, were replaced in sixteen, in some of these there being also a partial return of workers, and eight disputes were recorded as indefinite.

Table IX, giving the number of disputes, workers affected, and time loss by months since 1922, shows that there is a tendency to have more disputes in the spring and early summer months with the resulting peak in the number of workers affected and time loss occurring during the summer. In 1929, while the peak was reached in May in these three groups of statistics, there was a very small number of workers affected and time loss recorded during the summer months. On the other hand, a relatively large time loss was recorded in February due to a dispute involving 700 textile workers at Hamilton, and in November and December owing to an extended dispute of pulpwood cutters involving some 800 workers.

Strikes and Lockouts in Other Countries 1919-1929

The accompanying table gives the principal figures as to strikes and lockouts in other countries as compared with Canada since 1919, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries, figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year, with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is, thrown out of work by disputes to which they were not parties, but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is, the number of man working days lost, are not given. Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

The following notes give information as to the more important strikes and lock-outs in each country in the year 1929.

Great Britain and Northern Ireland

In addition to the information contained in the table below, a summary of industrial disputes for the year 1929 classified by industries is given on page 119.

The greatest industrial dispute occurring in Great Britain since the general strike in 1926, was that which took place in the cotton spinning and manufacturing industry in Lancashire and lasted from July 29 to August 19, when through the efforts of the Ministry of Labour, work was resumed and the dispute referred to arbitration. The number of workers involved in this dispute was 388,000 and the time loss 6,596,000 working days. The stoppage was due to the decision of employers' associations to reduce wages by 12.82 per cent. The arbitration board appointed fixed the reduction at 6.41 per cent.

Of the 420 disputes reported for the year, 151 were in the coal mining industry. One of these involved 3,800 coal miners at Seaham Harbour from March 2 to June 17, and was settled on employers' terms. A strike of 3,300 shipyard workers at Belfast for increased wages was in progress from April to November, and ended in a compromise settlement.

Australia

Two serious disputes occurred in Australia during 1929. The first was a general strike of timber mill workers, which, with those indirectly affected in the building trades, etc., involved about 14,000 workers, and was in progress from February to June, although several hundreds of strikers in New South Wales did not apply for work until October. The dispute arose over the refusal of the workers to accept the award of the Federal Arbitration Court fixing the hours of work at 48 per week instead of 44 per week which the strikers demanded. Work was generally resumed in June on the 48-hour per week basis.

The other dispute was in the coal mining industry in New South Wales and was due

to the attempt of the mine owners to effect a reduction in wages when they reported they were losing their markets due to high production costs. Between 10,000 and 12,000 miners were out of work from March and the dispute was still in progress at the end of the year. On December 18, one of the largest collieries was opened under government operation with volunteer labour.

Finland

The strike of dock workers in thirty Finnish ports which began June 2, 1928, and which at one time involved 12,000 workers, was not settled until April 12, 1929. The principal demand was for a written collective agreement. Although this was not secured, certain increases in wages and other concessions were made to the strikers with the provision that the terms of settlement might be altered in 1930, if either party gave notice by the end of March.

France

A strike of about 8,000 coal miners in the Loire district was in progress during the first two weeks of January, 1929, over a demand for increased wages. No definite report as to the settlement of this dispute was received, but later an agreement dated May 1, 1929, in this district provided for increased wages for the coal miners.

Germany

Following the failure to renew a collective agreement in the Silesian textile industry, employers closed down their factories and about 45,000 workers were out of employment from May 25 to July 13. An award by a conciliation board granting increases in wages was rejected by employers but was then declared binding by the Federal Minister of Labour and the dispute thus terminated.

British India

The principal dispute of the year concerned about 109,000 workers in 64 textile mills in Bombay. This dispute which began in April over the dismissal of a certain group of workers did not actually terminate until September 17. In the meantime, however, a large proportion of the workers had already returned to work. A number of riots occurred during the progress of this strike, which ended in favour of employers.

At Calcutta, a strike was reported to have been in progress in July and August, involving 120,000 jute mill workers against the introduction of a 60-hour week, but it was called off on August 20.

United States

A number of strikes occurred in the textile mills of the Southern States during 1929. In March, a strike involving about 3,000 workers occurred in a rayon factory at Elizabethton, Tennessee, and later in April, employees of the same factory and of another in the same town, numbering about 5,000 again went on strike alleging discrimination against union employees. This strike was terminated about June 1. In North Carolina and South Carolina strikes occurred in several towns, in some cases for increased wages and in others for the abolition of the speeding up system. The results of these strikes were rather indefinite, but in some cases the speeding up or stretch-out system was abolished.

A two weeks' strike of ladies' garment workers took place in New York City in July. Between 15,000 and 25,000 were involved in the attempt to secure union working conditions throughout the industry as well as increased wages and other demands. The settlement arrived at provided for a joint control commission with an impartial chairman for the maintenance of union conditions. The other demands of the union were dropped.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES 1919-1929

Estimated Population of United States

The National Bureau of Economic Research, in a report recently issued, estimates the population of the continental United States, as of July 1, 1928, as being 119,306,000, or an increase of 14,299,000 since the same date ten years ago. The report shows that about 61 per cent of the population of the country is supported by the earnings of the other 39 per cent. This proportion is not affected appreciably by the number of persons whose incomes are derived from rentals, dividends and interest on stocks and bonds and from securities of a similar nature, the percentage of such individuals being small.

The total number of persons fifteen years of age and over has grown more rapidly than has the total population. In other words, the percentage which those above the age of fifteen years constitute of the total populations, appears to have increased. This increase is apparently accounted for by the fact that a reduced death rate among children has resulted in a larger proportion of the population surviving to the age of fifteen years.

The estimate of the number of persons under fifteen years of age in 1909 is 29,069,000. In 1919 there were 33,449,000 and in 1928 the estimate is 35,706,000.

COMBINES INVESTIGATION ACT

Alleged Combine in the Plumbing and Heating Industry in Ontario

AN investigation into an alleged combine of persons engaged in the plumbing and heating industry in Ontario was completed in December, 1929. The report of Mr. Gordon Waldron, K.C., appointed as a commissioner under the Combines Investigation Act to investigate the alleged combine, stated that a combine had been found to exist, and that the members of three associated organizations of plumbing and heating contractors, known as the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, Limited, and the Amalgamated Builders' Council together with certain members of the Toronto Plumbing and Heating Contractors Union and other persons, had been parties or privies to or had knowingly assisted in the formation or operation of a combine within the meaning of this Act. A summary of the report of the investigation was published in the January, 1930, issue of the LABOUR GAZETTE, at page 17. Earlier statements of the progress of the investigation appeared in the issues of August, 1929, p. 868, and December, 1929, p. 1338.

Cancellation of Registrations

The Amalgamated Builders' Council and the Toronto Plumbing and Heating Contractors Union had secured registration as trade unions under the Trade Unions Act on June 8, 1928, and May 21, 1929, respectively. Following the receipt by the Minister of Labour of the report of the investigation into the alleged combine, these two registrations were declared void and cancelled on December 31, 1929, by the Secretary of State and Registrar-General of Canada, under whom the Trade Unions Act is administered. The following notice of the cancellation of the registration of the Amalgamated Builders' Council was published in an issue of the *Canada Gazette* on January 2, 1930, together with a similar notice respecting the Toronto Plumbing and Heating Contractors Union.

DECLARATION OF AVOIDANCE
AND
CANCELLATION OF THE REGISTRATION OF A TRADE UNION

The undersigned, Fernand Rinfret, Secretary of State and Registrar-General of Canada, has the honour to observe as follows:

That the Amalgamated Builders' Council purported to be registered as a trade union under the provisions of the Trade Unions Act, chapter 202 of the Revised Statutes of Canada, 1927, by a form of application therefor dated the 30th of April, 1927; That a Certificate of Registry under the said Trade Unions Act purported to issue bearing date the 8th day of June, 1928; That Gordon Waldron, Esquire, K.C., was appointed a Commissioner under the provisions of the Combines Investigation Act, being chapter 26 of the Revised Statutes of Canada, 1927, to investigate the business of the Amalgamated Builders' Council, and the business of the Canadian Plumbing and Heating Guild, and the business of the Dominion Chamber of Credits, and the business of the persons named in the schedule attached to Order in Council, P.C. 1311, 1929, and the business of any and all other members of the Amalgamated Builders' Council or of the Canadian Plumbing and Heating Guild, and the business of any other person who is or is believed to be a member of the said alleged combine or a party or privy thereto; That the said Commissioner has reported that the true purposes of the said Amalgamated Builders' Council, fraudulently concealed, were to enable the boycotting of jobbers and manufacturers, despite the Combines Investigation Act, and the discipline of expelled or non-joining operators by depriving them of both materials and union labour; That the registration of the Amalgamated Builders' Council was a sham and a fraud, that its true purposes shown clearly by the evidence were not those set out in the petition to the undersigned for registration, but were to enable the Guild to effect, in violation of the Statutes, an unlawful oppression or discipline of the public and the persons engaged in the plumbing and heating trades, whether members or not members of the Guild, and it was advised that the registration of the Amalgamated Builders' Council was null under Section 6 of the said Act, and ought to be so declared at once; That the Trade Unions Act, Section 6, provides that if one of the purposes of such trade union is unlawful such registration shall be void.

Now therefore, I, the said Fernand Rinfret, Secretary of State and Registrar-General of Canada, having in view the finding and recommendation of the Commissioner above referred to, and for the purpose of giving effect thereto in so far as it is within my power so to do, do hereby declare that the purposes of the said Amalgamated Builders' Council were to the extent above recited unlawful, and that the purported registration of the said Amalgamated Builders' Council was void, and that the Certificate of Registry of the said Amalgamated Builders' Council is hereby cancelled.

Made at the City of Ottawa, under my hand and Seal of Office this 31st day of December, 1929.

FERNAND RINFRET, L.S.,
Secretary of State and
Registrar-General of Canada.

Prosecution of Members of Combine

On November 8 an interim report of the investigation into the alleged combine was remitted by the Minister of Labour to the Attorney General of Ontario for such action as he might choose to institute, in accordance with section 31 of the Combines Investigation Act, which provides for procedure in prosecutions as follows:—

31. Whenever in the opinion of the Minister an offence has been committed against any of the provisions of this Act, the Minister may remit to the attorney general of any province within which such alleged offence shall have been committed, for such action as such attorney general may be pleased to institute because of the conditions appearing,

(*a*) any return or returns which may have been made or rendered pursuant to this Act and are in the possession of the Minister and relevant to such alleged offence; and

(*b*) the evidence taken on any investigation by the Registrar or a Commissioner, and the report of the Registrar or Commissioner.

2. If within three months after remission aforesaid, or within such shorter period as the Governor in Council shall decide, no such action shall have been taken by or at the instance of the attorney general of the province as to the Governor in Council the case seems in the public interest to require, the Solicitor General may on the relation of any person who is resident in Canada and of the full age of twenty-one years permit an information to be laid against such person or persons as in the opinion of the Solicitor General shall have been guilty of an offence against any of the provisions of this Act.

3. The Solicitor General may apply to the Minister of Justice to instruct counsel to attend on behalf of the Minister at all proceedings consequent on the information so laid, and upon such application the Minister of Justice may instruct counsel accordingly.

The final report of the investigation was also forwarded to the Attorney General of Ontario in accordance with the provisions of the above section 31. It was recommended by the Attorney General of Ontario on January 7 that action at the present time should be taken by the Dominion Government rather than by the Province, for the principal reason that the Province was associated with a reference to the Privy Council in England questioning the constitutional validity of the Combines Investigation Act and Section 498 of the Criminal Code. As a result of this decision of the provincial Attorney General, an Order in Council, P.C. 107, dated January 14, 1930, was passed by the Privy Council of Canada terminating immediately the period allowed exclusively to the province by section 31. The above section 31 of the Combines Investigation Act in subsections 2 and 3 outlines the further procedure to be taken to enable the prosecution of members of the combine by the Department of Justice of Canada.

Men's Clothing Industry in U.S.A.

The United States Department of Labour recently published as Bulletin 503 of its "Wages and Hours of Labour Series," a report on Wages and Hours of Labour in the Men's Clothing Industry, 1911 to 1928. The bulletin presents detailed results of a study of the Bureau of Labour Statistics of the men's clothing industry in the United States in 1928. The report includes information concerning average earnings per hour, average full-time and actual hours and earnings in one week, and days on which wage earners in the industry worked in a representative weekly pay period, change in wage rates and of full-time hours in the industry since July 1, 1926, overtime and rates paid for overtime and for work on Sundays and holidays, bonus systems, employment and pay rolls, the importance of the industry, and other items of general interest.

Between 1926 and 1928 there was a slight change in both hours and earnings. Average full-time hours per week decreased from 44·3 in 1926 to 44 in 1928, average earninge per hour decreased from 75 cents to 73·1 cents, and average full-time earnings per week decreased from $33.23 in 1926 to $32.16 in 1928. Average full-time hours per week of males in 1928 by occupations ranged from 43·7 for vest operators to 44·3 for pants pressers, and of females ranged from 43·3 for coat operators to 44·8 for pant basters.

Average earnings per hour of males in 1928 by occupations (not including "other employees") ranged from 82·1 cents for examiners, shop and stock room, to $1,129 for cutters, cloth, and of females ranged from 38·3 cents for examiners to 63·2 cents per hour for coat operators. Average full-time earnings per week of males in 1928 by occupations (not including other employees) ranged from $36.12 for examiners to $49.45 for cutters, cloth, and of females ranged from $16.97 for examiners to $27.37 for coat operators.

OLD AGE PENSIONS IN CANADA

THE accompanying table is a summary of expenditures to the end of 1929 under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial acts making this legislation effective within the respective provinces. Full statistics of Old Age Pensions in Canada for each quarterly period are published from time to time in the LABOUR GAZETTE, the last report having appeared in the issue for November, 1929 (page 1211). Full returns for statistical purposes have not yet been received from the Province of Ontario, so that complete statistical tables for the last quarter of 1929 cannot be included in this issue, but a table is now given showing the amounts expended by the Dominion and by the several provinces to the end of the year. The next issue of the LABOUR GAZETTE will contain full statistics on the subject for all the provinces which have so far entered the federal old age pensions scheme.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA, AS AT DECEMBER 31, 192

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	Ontario Act effective Nov. 1, 1929	Saskatchewan Act effective May 1, 1928	Northwest Territories Order in C. effective March 1, 1929	Totals
Total amount of pensions paid during third quarter of fiscal year 1929–30 (Period, Oct. 1 to Dec. 31, 1929)	$ 110,593 99	$ 256,535 36	$ 286,182 01	$ 711,657 94	$ 247,502 34	$ 199 96	$1,612,671 60

CONTRIBUTORY OLD AGE PENSIONS IN ENGLAND

Study of British System With View to Conditions in Manitoba

AN investigation of the British system of contributory old age pensions was recently made by Dr. E. S. Moorhead, chairman of the Welfare Supervision Board of Manitoba, for the purpose of obtaining information which might be used in framing future legislation in that province. A report giving the results of the inquiry was recently presented to the provincial Department of Health and Public Welfare. Dr. Moorhead studied at close quarters the administration of the Widows', Orphans', and Old Age Contributory Pensions Act, interviewing the higher officials as well as many of the local administrators. His inquiries in both country and city showed that the new act which became law in 1925, was proving to be very popular.

Stress is laid in the report on the fact that the Pensions Act makes use of the existing machinery created under the National Health Insurance Act, and that the cost of its administration is therefore much lower than it would otherwise have been. "I was greatly impressed," Dr. Moorhead writes, "by the fact that when the Government initiated the Contributory Pension Act, the machinery for its collection was already in operation. The contributions are collected without any expense to the Government, since it is as easy to collect 36 cents per week through an employer as 18 cents, and requires no more labour to attach two stamps than one. This is a very important point as far as Manitoba is concerned. England collects her pension contributions without cost from exactly the same people as she collects her National Health Insurance. Manitoba has neither a health insurance act, nor such facilities for collecting pension contributions at little or no expense."

Dr. Moorhead sketches the provisions of the Contributory Pensions Act, which was passed in April, 1925, and came into operation in January, 1928, and provides a weekly benefit of $2.50. He points out that every employed person between the age of 16 and 65 must be a contributor. Such a person can only come under the Act, if he has paid contributions for at least 104 weeks in the previous five years, or for an average of 39 per year for each of the previous three years. "As far as I could make out," he says, these figures were arrived at arbitrarily; they have no relation to the amount of benefit which would be received when the contributor had reached 65. The contributions are apparently required as evidence of the good faith of the contributor. Should he be disabled by sickness and accident, or unemployed through no fault of his own, he is considered to have made the contributions. For several years to come he will, on reaching the age of 70, come under the operation of the Non-contributory Act, and the benefits will continue till death, without investigation as to means, and without any disqualification. The pension cannot be alienated for debt or any other cause. A pensioner is given a book of vouchers, each of $2.50 in value. These can be cashed weekly at any post office in the Kingdom designated by him. Under the old Act, admission to a work-house disqualified him from pension during the time that he was an inmate. Under the new Act the pension is payable to him without any restrictions. It can neither be taken by work-house nor hospital authorities to reduce the cost of his upkeep. Should a man die either during the contributory period or after he has become a pensioner, his wife is entitled to a pension till death, and his children until they reach the age of fourteen."

A very important limit to the scope of the Contributory Pensions Act is noted by the writer, namely that its benefits are confined to industrial employees, this being the only class from which it has been found possible so far to levy contributions. "England," he says, "would like to have a contributory pension system for the whole country, certainly for all those who are likely to stand in need of it, but she has found no method by which she can collect from everybody, from the age of 16 onwards, and unless she can do so, any modification would be useless. The small shop-keeper and the small farmer are likely to become dependent in their old age, yet there is no provision for them. If the Government were to throw the thing wide open now, the healthy young bachelor, or even young married men, would not be seeking admission; but the middle aged man suffering from tuberculosis, heart disease, or a dozen other causes for disability, would at once join up, more particularly if he had a wife and young children. From the point of view of the government it would be unsound. He would be expecting to come in at fifty for the same rate that would have been required at 16. It cannot be done."

However, Dr. Moorhead points out, "there is one loophole allowed, and that is by the method of voluntary contribution. Should a man have been a contributor for at least two years as an employee, he may, should he rise to a position of independence, become a voluntary contributor, in which case he has to attach all the stamps himself. Should another, not being an employee within the meaning of the Act, marry a woman who is an employee, he may assume, in his own name, all her privileges, and continue as a voluntary contributor. An employee earning over $1,250 a year is exempt; should his wage drop below this point he comes under the Act, and can become a voluntary contributor if his pay again rises above the limit."

Dr. Moorhead points out that the Government Actuarial Department is one of the most important factors in the successful administration of the Act. "It was," he says, "a very small department before 1906, when National Health Insurance came into force, followed two years later by the first Old Age Pensions Act. Neither of these would have been possible but for the statistics and estimates prepared by the Actuaries. No country, contemplating such a big undertaking in social economics, can embark on a scheme such as this until further liabilities have been foreseen. This can only be done by actuaries who are familiar with the conditions existing in that country. I stated earlier that the collection of the pension contributions cost the Government nothing, but if I left the impression that Manitoba could hope for a similar happy state of affairs, I am afraid that there would be disappointment. National Health Insurance has existed for some years, a sum of $9.36 per head is collected annually. The bulk of this (I think over 95 per cent) is collected by the Friendly Societies. For their services in collecting, book-keeping, etc., they are allowed the sum of $1.06 per head per annum. This amounts to 11 per cent; but seeing that allowing for sickness, unemployment, etc., there are not 52 working weeks, the cost of collection, I believe, absorbs 12½ per cent of the total sum. When the Pension Bill

actually came into operation it was estimated that the number of working weeks would be 49 per annum. Owing to industrial conditions in England, it has, I believe, turned out to be 44 or 45. This point would have to be considered by the actuaries employed by the Government of Manitoba. There is one thing positive, that it would cost us at least as much to collect the pension contributions as it costs England to collect her combined premiums. The sum that is at present contributed for pensions per week is 18 cents for a man and 9 cents for a woman. In the year 1935 these sums are to be increased by 4 cents and 2 cents, bringing the amounts up to 22 cents and 11 cents. A similar increase in 1945 brings the payments to 26 cents and 13 cents. In 1955 there is a further increase to 30 cents and 15 cents. The Bill does not make provision for any increases beyond this amount, and it is considered that this will be sufficient to fulfil all contracts at little if any additional cost to the State."

The benefits provided in return for these sums, are as follows, $2.50 a week is paid to every man from the age of 65 till death. This sum is paid without conditions or restrictions, and regardless of what the means of the individual may be. Exactly the same regulations apply to insured women on attaining the age of 65. Should a married man who is insured die at any age his widow gets $2.50 a week till death. Allowances to a widow in respect of children under the age of fourteen are at the rate of $1.20 a week for the eldest child, and 72 cents a week for each other child. Payments in respect of orphans under the age of fourteen are at the rate of $1.80 a week for the eldest child, $1.44 for each other child.

Discussing the question of the rates that would be required for any contributory scheme Dr. Moorhead is convinced that "when such a scheme is commenced, it must be on a flat rate for all, and it must be also at a rate which will at some later date be actuarially sound. When the Act came into force in England all employees between the age of 16 and 65 had to be taken in at the standard figure. This was subject only to the condition of payments made over a period of five years to which I have previously referred. The figures prepared by the Actuarial Department show what the cost at different ages would have been to supply the equivalent benefits provided by this Bill. At 25, 33 cents a week; at 35, 52 cents, at 45, 85 cents, at 55, $1.84. If it is considered that these sums are before the decennial increases have come into effect; also that a pension scheme in Manitoba would have to be based on at least $5 a week benefits, which would mean that all these figures would have to be doubled; and if finally it be remembered that cost of collection would have to be added to these in the case of Manitoba, I think it will be apparent that the rate must be a flat one, that the payment of contributions must begin at an early age, and that for a period of years there will be a loss which must be assumed by the Government. There is a further point of importance which should hasten the assumption of some method of contributory pensions. Canada is at present only paying pensions at the age of 70. Most of the other countries give pensions at the age of 65. It will not be long before the citizens of the Dominion demand that their pensions should commence at 65. When that time comes, the country will be staggered at the cost of it, if on a non-contributory basis."

Considering further the possibility of a contributory scheme for Manitoba, the writer says the question must be solved "how payments are to be collected for a contributory pensions scheme in a province which is agricultural to the extent of about 60 per cent, and where the tremendous distances are a serious factor. England has not found the answer, but would gladly welcome anything feasible. I was advised to keep in touch with South Africa, which with problems somewhat similar to ours, has been working for some time on a solution; even if she has not found it her experiences might be of value to us."

Dr. Moorhead sums up his findings as follows:—

(1) That the contributory pension scheme is exceedingly popular in England.

(2) That a much larger proportion of the population than the employees within the meaning of the Act, would like to be included within its scope.

(3) That no means has been found to make it compulsory for the whole country.

(4) That it would be expensive and unsound if brought forward on a voluntary basis.

(5) That England gives the cheapest industrial insurance in the world.

(6) That England is prepared to expend from State funds an immense sum for the next thirty-five years or more in order to bring the plan to a sound basis.

(7) That any other community taking up old age pensions will have to be prepared for a similar experience.

(8) That the results of an actuarial estimate will show that non-contributory pensions speedily become an excessive burden on the taxpayer.

"While there are many difficulties," he concludes, "in the way of initiating a compulsory pension scheme in Manitoba, I do not believe that they are insuperable. Plans for the collection of the contributions suggest themselves, but this is not the place to bring them forward, seeing that they would require careful deliberation by a strong and representative committee. The impression left as the result of my investigation is that the problem must be faced, and that Manitoba with the assistance of the expert advice from authorities all over the world is as likely to find a solution as any other country."

AGE LIMITATIONS IN INDUSTRY

THE Industrial Relations Section of Princeton University has issued a "statement of fact and opinion" concerning age limitations in industry, this subject being considered as one of the important new developments in the field of industrial relations which it is the purpose of the section to study. The first chapter of the report consists of statements indicating the extent and significance of the practice on the part of employers discarding or refusing employment to workers after they have reached the age of 40 or 45 years.

Opinions as to the extent of this practice appear to vary considerably. An inquiry made last year by the American Management Association showed that while the large majority of companies have no formally established age limits they have a "tacit understanding that the employment office should not take an older man or women". The National Association of Manufacturers admits that "30 per cent of the manufacturing plants have maximum hiring age limits, because they refuse to hire employees beyond certain fixed ages, but many of them make exceptions in the case of former employees". The remaining 70 per cent stated that they "hire only on a basis of physical fitness".

The second division of the report states some of the reasons for the existence of the problem. These are (1) the introduction of pension plans, under which an age limit—commonly 45 years—is frequently fixed for persons entering an employment for the first time; (2) the introduction of group insurance plans, under which the rates paid by employers increase with the age of an employee; (3) the cost of workmen's compensation, older employees being supposed to have a greater liability to injuries; (4) the increasing demand for physical fitness, combined with the supposed higher sickness rate for the aged; (5) the increasing demands of industry for mental adaptability; (6) the lower wage cost of younger workers, combined with the necessity of a low "starting salary"; (7) the policy of promotion within the company, which leaves open to outsiders only employments at the bottom of the ladder, this practice tending to exclude older persons; and (8) "technological unemployment" caused by mechanical changes which displace skilled craftsmen.

Suggested solutions of the problem are sketched in the third chapter, which points out however, that comparatively few suggestions in this direction have been offered. Measures tending to mitigate the evil of the unemployment of the aged are as follows:—

1. State pensions and state employment exchanges. It is pointed out that "in virtually every civilized country" abroad, the responsibility for the old age of workers has been removed from the individual concern and properly placed upon the entire industrial society. Such provisions enable employees to engage men and women at any age without hesitation as long as they are capable of performing a particular task.

2. Contributory pensions and insurance, the payments being graduated.

3. The dismissal bonus, or payments to employees of long service when they are dismissed because of lack of work due to changes in methods of production.

4. Retraining, transfer and medical supervision of older employees.

5. A new attitude on the part of workers and employers. In this connection there is stated to be a growing feeling that business and industry are losing something by the application of an arbitrary age limit in employment.

The report concludes with a list of books and magazine articles dealing with the various aspects of subject of age limits in industry.

Mutual Benefit Associations

Another recent publication of the Industrial Relations Section of Princeton University presents the results of a study of one hundred mutual benefit associations. The purpose of these societies is to protect the industrial worker against the contingency of sickness (not including risks of indutrial or occupational diseases, which are otherwise covered). Insurance of this class, it is pointed out, is less advanced than other forms of industrial

insurance, such as that against death, disability, accident and old age (the latter contingency being covered by means of endowment policies). Many companies offer no protection to their employees against the contingency of loss of income by ill-health. Mutual benefit associations are designed to meet this need. It is shown that "the lower cost of the mutual benefit plan through self-imposed economy, its informality and greater intimacy, and the by-product of group feeling often developed, have assured the plan a place in the industrial relations program in many companies. While group insurance may absorb the function of indemnification in case of death, which most mutual benefit plans have assumed in the past, protection against illness will probably remain a proper task of a mutual association."

The present report from the study of existing schemes seeks to establish model provisions for the constitution and by-laws of a successful association. It contains a useful bibliography for the use of persons desiring to pursue the subject further.

EMPLOYEES' REPRESENTATION IN MANAGEMENT OF BORDEN'S FARM PRODUCTS COMPANY, LIMITED

DURING December, the Borden Farm Products Company, Limited, of Montreal, gave effect to a plan by which the employees are entrusted with a share of responsibility for the management of the business. The purpose of the plan and the organization of the joint committees of management are fully described in the By-laws, which are as follows:—

By-Laws Borden's Farm Products Co., Limited, Employee Representation Plan

Purpose.—The Employees and Management of Borden's Farm Products Co., Limited, recognizing that their interests are dependent one upon the other, and desiring to establish a business relationship upon an equitable and durable basis that will result to a mutual advantage, do hereby establish and adopt a plan of employee representation which has as its object the development of the spirit of co-operation, mutual understanding and means for the full consideration and adjustment of questions of policy pertaining to working conditions, the proper disposition of suggestions and recommendations, the settlement of disputes, arrangements for safety, sanitation, education and such other matters of mutual concern as pertain to employment and its consequent effect on the working and living conditions of the employees.

Local Committee.—As a means of carrying this plan into effect there shall be organized at each Delivery Branch and Pasteurizing Plant, a Local Committee elected by and from the employees, and consisting of three (3) regular members and one alternate. At the time of the election of this committee, the one receiving the largest number of votes shall be considered the Chairman of this committee.

Term of Local Committee.—Every Local Committeeman, including the Alternate shall serve for one year from the first week in December or until his successor shall be elected. When leaving office all Committeemen shall turn over to their successors any and all unfinished business, records, files, etc.

Local Committee Power.—The Local Committee shall have full power to receive, discuss and vote upon all Local matters presented to it by the employees, and to call any employee before it to furnish information regarding any matter under consideration.

Alternate Committeeman.—The Alternate shall act on the Local Committee during the absence of any regular committeeman. Should a member of the Committee be either a complainant, defendant, or otherwise involved in any case properly coming before the Local Committee, he shall remain with the Committee during the discussion of the case but retire in favour of the alternate Committeeman when the time for voting on the case arrives.

Employees Use of Local Committee.—Any employee of the Company, or the Management, shall have the right to present suggestions, requests, complaints or criticism to the local committee or any member thereof, to receive a full and fair hearing, provided such matters are presented in writing and signed by the party or parties presenting same, and excepting that no local committeeman nor the local committee as a body shall receive, consider or act upon any complaint or grievance of any employee until after the employee shall have presented such grievance to his Superintendent and received a decision upon same. Should such decision be unsatisfactory to the employee, he shall then have the right to take

the subject up with his Local Committee. Should a former employee desire to review the termination of his employment with the Local Committee, Superintendent or General Manager, he may do so in this order, provided he states his case in writing to the Local Committee on brief provided for the purpose, within ten (10) days after his last day in the Company's employ.

Local Subjects.—Any subject affecting only an individual employee, or affecting conditions in only one delivery branch of pasteurizing plant is considered a "Local" subject and shall be handled in the manner prescribed in these by-laws under rule titled, "Employees Use of Local Committee."

General Committee Personnel.—The Chairman of each local committee together with an equal number of Management Representatives shall constitute the General Committee. This committee shall consider and act upon any matter properly referred to it, and each member shall vote as an individual whether representing the employees or the management. This committee shall select its own chairman at each meeting and formulate its own rules of procedure.

General Policy Subjects.—Any recommendation of a general policy nature, affecting more than one craft or local, whether proposed by any group of employees of one or more locals, or by the Management, shall be referred directly to the General Committee for action. Such recommendation together with the action of the General Committee shall then be referred to the General Manager.

General Manager.—Matters not receiving satisfactory adjustment by the General Committee may be referred to the General Manager of the Company who will give full consideration to any subject properly referred to him. The decision of the General Manager shall be final and binding.

General Committee Meetings.—During the first week of January of each year, and at such other times as may be required, or if requested by a majority of Local Committee Chairmen, the General Manager shall cause a meeting to be called of the General Committee to consider such business as may properly come before this Committee as a result of the operation of this plan.

Guarantee of Independence of Action.—No employee in his dealings with any of his Committeemen regarding any matter of employee representation, nor any committeeman in the performance of his duties as such, shall be discriminated against on account of any action taken by him in good faith.

Compensation.—Any employee operating under this plan, who may be kept from his regular employment by the performance of duties necessary to the proper conduct of the affairs of this plan, other than local meetings, shall be compensated by the Company according to their regular average earnings for the time so required, and for all necessary expenses incident to such work.

Meetings.—The members of each Local shall hold a meeting at least once every month either at the call of the Local Committee or on the written request of any ten (10) members at a time and place most convenient for the majority of the members. The date, hour and place of meeting shall be posted in some conspicuous place on the premises of the Local at least three (3) days previous to the meeting.

Ten (10) per cent of the number of members of any local, but never less than seven (7) members, of any local, shall constitute a quorum for the transaction of business.

The Chairman of the Local Committee shall preside at every such meeting. In his absence one of the other members of the Committee shall preside.

At such meetings the following shall be the usual order of business: Reading of minutes of previous meeting and their approval; Report of matters acted upon by Local Committee; Reports of special committees; Reading of communications; Roll call; Unfinished business; New business; Adjournment.

Local Committee Elections.—Between the first and tenth days of December in each year, employees of each local shall nominate and elect from among their number by secret ballot, three men to serve as members of their Local Committee, and one Alternate.. The election to take place the same day as the nomination.

Notices of Local elections shall be posted in at least two conspicuous places on the premises of each Local between five (5) and (10) days previous to the date of election.

Any employee, except Superintendents, Assistant Superintendents, Foremen and those in the clerical forces is eligible to vote at elections and to be elected to membership on the Local Committee.

Before every nomination and election of committeemen, the officiating Chairman, with the approval of a majority of the members present, shall appoint three (3) persons who are not members of the Local Committee to serve as a Committee on Election.

The Committee on Election shall supervise all details of the election, shall make all rules necessary to its conduct not provided by these

by-laws, decide in accordance with such rules and these by-laws all controversies which may arise in connection with the election, and be solely responsible for its honest, fair and orderly procedure.

In each Local each member shall vote for not more than five (5) names on his nominating ballot for Committeeman. The six members receiving the highest number of votes of all votes cast, shall be declared nominated.

The three (3) of the six (6) nominees receiving the highest vote on all election ballots cast, is the elected committee. The nominee receiving the fourth highest vote on all election ballots cast is elected alternate member of the committee. In the event of a tie vote, the names tied shall be voted upon again until one receives a majority.

In the event of any eligible candidate declining a nomination or election, the vacancy caused thereby shall be filled by another election immediately following such declination.

Should the same name be entered more than once on any ballot it shall be counted only once.

Should more than five names be entered on any nominating ballot, or more than three (3) on any election ballot, or more than one (1) on any ballot cast to decide a tie, such ballot shall be declared void and shall not be counted.

Should the number of ballots cast exceed the number of eligible votes present, the entire vote shall be declared void and another vote taken.

Special Elections.—Any vacancy in the membership of a Local Committee, other than that caused by a member declining to serve, shall be filled by a special election. Should the Chairmanship of a Committee be vacant, the membership shall decide when filling the vacancy, which member of the committee shall act as Chairman for the remainder of the term.

Special elections of Local Committeemen may be held at any time at the call of the Local Committee or upon the written petition of one-third of the members of any Local, provided notice of same, stating the purpose for which the election is to be held and the date, hour and place thereof, are posted in at least two (2) conspicuous places on the premises of the Local for between five (5) and ten (10) days previous to the date of election. Special elections and the nominations preceding shall be conducted in the same manner as regular elections.

Recalls.—Whenever a written petition signed by not less than one-third of the members of any Local, asking for the recall of any Committee-man is filed with the Local Committee, a special election shall be held in that Local within thirty (30) days thereafter, to decide by a majority vote whether such Committeeman should be recalled or continued in office.

In the event of any or all members of a Local Committee failing continuously for thirty (30) days to perform the duties prescribed for them in these by-laws, there shall be held upon the written petition of one-third of the members of such Local a special meeting to determine whether or not such Committeemen should be recalled and, if recalled, to elect successors.

Amendments.—No amendment to this plan shall be adopted that will in any way destroy or limit the equal voting power of either the Employee or Management Representatives on the General Committee.

To become effective, any amendment to this plan must receive a majority vote of all employees working under the plan and the approval of the management.

British Pension Changes

The amendments made in December to the Widows', Orphans', and Old Age Contributory Pensions Act, of Great Britain came into operation on January 2, 1930. (The effect of these amendments was outlined in the last issue of the Labour Gazette, page 3). The amending act provides for some extension of the period of payment of widow's pensions awarded under the original Act to widows whose husbands died before January 4, 1926; modifies the "average number of contributions" test for widows' and old age pensions where the insured person had ten years' unbroken insurance up to the age of 60; repeals the provision of the original scheme whereby children's allowances and orphans' pensions were affected by awards under the Workmen's Compensation Acts; and amends the existing conditions relating to recipients of Service dependants' Pensions in respect of stepsons. Provision is also made to enable persons who go to any part of the Empire to continue receiving their pensions or to maintain their insurance for pension purposes. The right to become voluntary contributors for all health insurance and pensions benefits is now given (subject to application within a prescribed time) to persons in excepted employments who are compulsorily insured for some or all pensions.

EMPLOYEES' BENEFIT PLANS OF CONSOLIDATED MINING AND SMELTING COMPANY OF CANADA

REFERENCES have been made in previous issues of the LABOUR GAZETTE to the employees' benefit plans of the Consolidated Mining and Smelting Company of Canada for the benefit of their employees at Trail, Tadanac, Kimberley, and other centres in British Columbia. A comprehensive review of all these welfare schemes, together with an outline of the policy of the company in its successful relations with its employees, was given in a recent issue of the Nelson *Daily News*.

In allocating the credit for the corporation's outstanding success in the industrial world, the article not only gives credit to the highly efficient technical staff and management, but also emphasizes that the company's strong position is due in large measure to the co-operation of employees of all ranks. In this respect the reasons for success are stated as follows:

"For this co-operation the good social relations obtaining between management and working force, the result of many factors, ranging from democratic institutions in presentation of the employee's views, to the principle of profit-sharing, and to schemes of the company to encourage a feeling of identity of interest and satisfaction with permanent employment, admittedly are largely responsible. So notable has been the success of the co-operative principle as exemplified in the workings of the Consolidated that wide attention has been attracted thereby to the Trail institution, and outsiders, including representatives of other institutions, are studying its social structure, with a view to finding out why its men are so keen, and what is the secret of the corporation's undisputed success in getting a selected and highly competent working force."

The varied and important factors entering into the general co-operative principle are summarized as follows:—

Profit-sharing, through the metal bonus.

Self-interest of the employee in efficiency, evoked by the efficiency bonus.

Security for old age, under the company's voluntary pension scheme, supplemented by the company's free group insurance.

Easy acquisition of a home, under the company's revolving fund for home building.

Assurance of a square deal, by the "open transfer" system that gives a man three chances.

Good working conditions, toward which a safety department contributes.

Benefit schemes instituted and maintained by the employees.

"Grading up" of the working force, by acceptance only of the physically fit, a move suggested by the benevolent society and the questionnaire system, by which many men get positions for which they are specially qualified by post training.

Democratic footing between employees and management through a workmen's committee elected from all departments.

Of the above plans, those which have already been fully reviewed in the LABOUR GAZETTE, are: group life insurance, (November, 1927, page 1177); the medical and hospital agreement (July, 1927); page 744 and November, 1927, page 1177); the pension scheme (March, 1926, page 236).

Workmen's Committee.—One of the basic features of the entire welfare program is considered to be the workmen's committee, representative of approximately 3,000 employees. The function of this body is described as being to assist the general manager in operating the plant efficiently. It is a clearing house for suggestions for better working conditions; and is the medium for effecting changes in plant practice designed to lead to greater efficiency, for examining of grievances, and for discussion and origination of policies of interest to the men.

Ideas for improvement of plant operation, which originate with a workman or group of workmen, are forwarded through defined channels to the management, and if considered feasible are given a trial or put into effect. In the same way any grievance is first reported to the plant representative, who brings it before the workmen's committee. A special committee from this body then scrutinizes the grievance. If the complaint is well-grounded, redress is frequently obtained without proceeding further than the foreman, However, if not adjusted at this stage, it is taken to the management though such recourse is reported as being rarely necessary.

The committee is elected by the employees, the electoral units being the various departments, or in some cases, the shifts. Representatives from each department to the central body are elected annually, but in order to ensure that the committee personnel possesses both continuity of office, and freshness of outlook, there are semi-annual elections, with one-half of the members retiring at each election.

Efficiency Bonus.—Another important feature in operation since May, 1922, is the efficiency

bonus, resulting in the working force of any particular plant or department sharing equally with the company the benefits derived from greater effort, care and co-operation. The objective is considered to have been obtained in any month when profits are increased, either by greater production, or increased rerecovery of metals with no increase in labour cost. In estimating the bonus in any month, the average performance of the plant or department concerned for six months immediately preceding the establishment of the efficiency rating is taken as the standard. The employees receive in the monthly bonus, which is added to their pay-cheques, one half of all that they, through their own effort, succeed in saving the company. This plan is designed to animate the working force to economize costs, eliminate waste and increase effort, and also, it is claimed, results in laggards being made to conform with the effort set by the rest of the working force.

Metal Bonus.—In addition to the efficiency bonus, there is also the daily metal bonus, which is a form of profit-sharing whereby the employees benefit as well as the company in advances in the average price of lead and zinc above the level of £17 per ton in London, that being the base price for the purpose of the plan.

Christmas Bonus.—There is also a bonus given annually at Christmas to employees, the sum having been recently increased to $75 for married employees and $37.50 for single men.

Employees' Stock Ownership.—In recent years the company has adopted the policy of giving one share of Consolidated stock to every employee of three years standing.

Housing Scheme.—In 1918, the company set aside $200,000 for a housing scheme, and now there is $750,000 out on loan at a low rate of interest. The latest loans are arranged so as to be fully repaid in 10 years. Approximately 600 homes, built to standard specifications and approved by the company's engineering department, have been erected to date.

"Open Transfer" System.—In employment practice, the company has adopted the "open transfer" plan whereby a man has three chances to "make good". If an employee is discharged by a foreman, the latter must post in writing his reason for such action. A foreman may get rid of an employee with whom he is not satisfied by giving him an open transfer, in which case the man is absorbed into some other department, often immediately, but at any rate an early date. This routine is repeated if necessary three times, and if an employee gets a third transfer in two years he is automatically discharged.

Safety Program.—The company is organized along modern lines in its provisions for industrial safety, having a safety department conducted by safety engineers, first aid instructors and teams, with first aid equipment, ambulance and dressing stations. The company has built and equipped modern hospitals and nurses homes at Trail and Kimberley, and has turned them over to the communities to be operated for public benefit.

One of the outstanding features of the health program is that lead-poisoning has been reduced to one-thirtieth of the percentage of cases occurring ten years ago. This record is all the more significant when it is considered in relation to the fact that the corporation produces one-tenth of the world's supply of lead and zinc in addition to other metals. The methods employed in obtaining this successful result, are described as follows:—

"The path by which the Consolidated has almost succeeded in banishing 'leading' from its operations—extraction of more and more solids from the smelter fumes, provision of milk for the lead workers, the famous Ayrshire herd of nearly 300 milkers at Warfield, the care taken on every hand to immediately identify any incipient case—need not now be traced. The biggest factor in reducing 'leading' at the great Tadanac plant to very small proportions has been the collection of the fumes at their source so as to keep the workmen from contact with them. The problem of bettering practice on this matter is never absent from the minds of the management, staff, and safety department. Foreman watch their crews for symptoms of this complaint, and if a man is thought to be susceptible to lead, his employment will be changed. Close medical attention is another contributing factor. . . . . .

"But in nothing that the Consolidated has ever done can it take pride more justifiably than its record in the matter of curtailment of 'leading'. In the past ten years the progress in this direction has been both steady and notable. In connection with this tale, Smelter Superintendent James Buchanan and Assistant Smelter Superintendent G. E. Murray are invariably mentioned.

"In ten years, while the lead production at Tadanac has gone up ten times—from 16,000 tons of bullion in 1918 to 165,565 tons in 1928—the number of cases of lead poisoning has declined from 157 in 1918 to 52 in 1928, or a third of the earlier total. That is to say as far as numbers of cases are concerned, 'leading' at Tadanac has declined to one-thirtieth the proportion of ten years ago. This is surely a betterment of working conditions for the world to note."

KODAK RETIREMENT, ANNUITY, LIFE INSURANCE AND DISABILITY BENEFIT PLAN

THE retirement annuity, life insurance and disability benefit plan of the Eastman Kodak Company was outlined recently by M. B. Folsom, assistant to the chairman of the company, in Bulletin No. 108, published by the American Management Association. The Canadian Kodak Company employs about 800 workers at Toronto. The writer traces the development of employees' welfare schemes inaugurated by the company, the first of these being the wage dividend plan established in 1912 with the object of providing a sufficient amount of money annually for investment so that after a reasonable period of service an employee would have accumulated from these dividends a sum adequate to produce an income during old age. There was also established by the company an employees' association fund and a service bonus. However well these projects operated, it was felt that they did not meet the pension problem completely, and some further plan was considered necessary. On December 31, 1928, the balance of the employees' association fund amounted to $3,500,000, and it was decided that this fund should be used toward meeting the accrued liability of a pension plan.

The new plan provides for a retirement annuity, life insurance and disability benefit. It is administered through an insurance company, payment being made by the Kodak Company both for the accrued liability and current payments.

Retirement Annuity.—The retirement annuity for male employees is payable in monthly installments after twenty years of service at age 65, as follows: (a) For service before January 1, 1929, an annuity equal to one per cent of his salary at the rate paid in 1928 multiplied by the number of years of service, prior to January, 1929; (b) For future service, an additional annuity equal to two per cent of each year's salary from January 1, 1929, to date of retirement, but not beyond the normal retirement date. For female employees the same percentage applies, but the term of service required is 15 years, with retirement at sixty. Provision is made for retirement before the normal retirement age if the specified term of service has been reached. Also, if both the company and the employee so desire, retirement may be postponed after the normal date, the annuity payments (which remain the same) being deferred. Any man leaving for any reason after twenty years of service, and any woman after fifteen years service will receive a paid-up annuity entitling him or her to the annuity already paid for, to begin at the age of 65, if a man, and at the age of 60, if a woman. The maximum salary considered under the plan is $10,000, all salaries in excess of that being treated as $10,000. This, it is stated, automatically sets a maximum on the annuity, which is not likely to exceed $6,500 or $7,000. A minimum of $30 per month at the age of 65 is specified and for retirement before age 65 the minimum is reduced correspondingly. This minimum applies to employees in the United States and England. In some countries such as India and China where there are native employees with low salary rates a minimum is not specified in the contract but will be determined for each country.

Life Insurance.—Provision for life insurance is made under the following arrangement: (*a*) death benefit equal to six months' salary for each employee who has completed six months and less than five years of service; (*b*) death benefit equal to one year's salary for each employee who has completed five years of service. Upon commencement of the retirement annuity payments the life insurance will be decreased by the amount of these payments until the life insurance is reduced to $500.

Total and Permanent Disability Benefits.—Under the sickness benefit plan, sickness allowances are paid by the company to those who are sick whether the illness is of temporary or permanent nature. For the longer service employees, these allowances run for twenty-six weeks.

Under the total and permanent disability benefit plan the benefits outlined below are paid to those who are permanently and totally disabled, the payments commencing at the end of twenty-six weeks of disability:—

(1) On total and permanent disability before the completion of 15 years of service and before age 60, the disability benefit is the total death benefit computed at that time, payable in equal monthly installments of one-third of the monthly salary for the last calendar year. If death occurs before the total amount of the disability benefit has been paid, the balance is paid the beneficiary.

(2) On total and permanent disability after the completion of 15 years of service, the disability is the retirement annuity accumulated to the date of disability.

(3) Death benefits continue to age 65 for men and age 60 for women, unaffected by payment of disability benefit in case of disability occurring after completion of 15 years of service. Death benefits are reduced by the amount of disability benefits paid in case of disability occurring before completion of 15 years of service.

On leaving the service for any reason, the death benefit is discontinued, but the employee has the usual option of continuing his insurance without medical examination.

ANNUAL REPORT OF LABOUR DEPARTMENT OF QUEBEC FOR 1928-9

THE annual report of the Minister of Public Works and Labour of the Province of Quebec for the year ending June 30, 1929, details the work of the Department in administering the various Acts and regulations that come under its jurisdiction. Among its duties and functions are: the supervision of all proceedings under the Quebec Trades Disputes Act; supervision of the work of the Women's Minimum Wage Commission; the inspection of industrial establishments, especially from the standpoint of the workers' safety and health; the carrying out of the provincial government's fair wage policy, requiring the payment of current rates of wages in connection with work under provincial government contracts; superintending licensed registry offices for domestic servants; administering the Boiler Inspection Act; superintending the inspection of foundries; maintaining provincial employment offices and supervising juvenile employment by means of educational certificates issued to children under 16 years of age. The Deputy Minister of Labour points out that the Department of Labour had entered upon its forty-first year of existence, and that in view of the general expansion of its work it would soon require to publish an annual report separate from that of the Public Works division.

Registration of Children.—Since the passing of the amendment to the Quebec Industrial Establishments Act in 1919, requiring educational certificates for children before they can be employed, 31,759 children have been registered. During the period covered by the report 2,356 children were registered at Montreal; 290 at Quebec; and 111 in the Eastern Townships. Complaints in regard to infringements of the Act totalled 480, of which 86 were well founded.

Industrial Accidents.—There were reported to the Department by employers a total of 2,180 accidents during the year, of which 32 were fatal. This total exceeds the number of accidents (1,424) reported to the Compensation Commission, and it is inferred that no claim was made to the Commission for many of the slight accidents.

Steam Boilers.—The report of the boiler inspection branch indicates that, through the efforts of the inspectors, second hand boilers are disappearing from the market. The inspectors have compelled drastic reductions in the pressure limitations of second-hand boilers, with the result that dealers are demolishing them for scrap iron. During the year, the number of boilers inspected was 1,228.

Government Employment Bureaus.—The general superintendent of employment bureaus reports that it was the best year in the history of the service, a total of 27,330 placements having been effected, of which approximately 4,000 were placements of women. Agriculture, lumbering and building were the employments which attracted the most applicants. It is stated that the very considerable increase in industrial activity in the northern part of the province will shortly necessitate the establishment of new bureaus to constitute a chain linking up with the offices at Montreal, Hull, Three Rivers and Sherbrooke.

As regards licensed employment bureaus, these now number 8 in the city of Montreal. New licences have been constantly refused, such refusal extending to the keepers of registry offices for servants. However, the report points out that since the municipal tax office, after consultation with the City attornies, assumed the issuing of permits to proprietors of servants registry offices, there are now in Montreal nineteen such "private bureaus run by women for hiring servants, under no one's control, for the city has ceased to bother with bureaus for men and women." It is stated that it may be expedient to change the regulations in order to control servants' registry offices.

Trade Disputes and Sunday Labour.—The report of the Registrar of Conciliation and Arbitration Councils outlines the few disputes in which official intervention was made. Several inquiries were also made into complaints received regarding Sunday work in plants in Northern Quebec.

Overtime Permits.—During the year 124 requests were received for permission to have women and children work beyond the regulation hours. Only thirty-six of these were granted, for the policy of the department is to limit this derogation of the statute as much as possible.

Board of Examining Electricians.—The report of the chief examiner emphasizes the work of his inspectors in educating electrical contractors in matters relating to the enforcement of the Canadian Electrical Code. During the year there were 101,100 inspections made, and 40,757 certificates issued.

The report also indicates the work of the department in examining the competency of stationary engineers and the issuing and renewal of licences to those qualified.

Report of Women's Minimum Wage Board of Quebec 1928-29

The third annual report of the Women's Minimum Wage Commission is included in the general report of the Department of Public Works and Labour for the year ending June 30, 1929. A tabular summary is given for each of the orders issued to date by the Commission governing the industry concerned. So far, the Commission has issued orders governing the employment of female workers in the following industries: Laundries, dyeworks and cleaning establishments; printing in all its branches; textile trades; boot and shoe and all other leather trades. Of the above orders, that governing the boot and shoe industry was issued during the period covered by the present report (LABOUR GAZETTE, May 1929, 489).

Boot and Shoe Industry.—During the year the Commission investigated the shoe and leather industry with a view to establishing a minimum wage scale. The working conditions encountered made the task difficult. It was found that most workwomen in such industries were on piecework with no fixed hours; that with each workwoman specializing the work was divided into many operations; that with the rotary system in vogue, one branch is busy for a certain period and then is idle when another becomes active; that many firms employ a system of sub-contracting making wage statistics difficult to compile. All these factors made the work of establishing a wage basis most complicated. However, a scale was eventually adopted unanimously by qualified representatives and approved by the Commission. In the whole province there are 119 boot, shoe and leather establishments employing 3,826 workwomen who receive an average wage of $12.20 per week. Of the total number employed 416 receive less than the fixed minimum.

Laundries and Dyeworks.—In the laundering industry in the city and island of Montreal, there were 46 firms employing a total of 1,391 workwomen whose average weekly wage was $12.96, as compared with 49 firms with 1,162 workwomen, averaging $12.64 per week in the year previous. For the rest of the province there were 18 firms employing 288 workwomen at an average wage of $9.08 per week as compared with 20 firms employing 246 workwomen at a weekly wage average of $9.36 during 1928.

Textile industry.—The textile industry in the city and island of Montreal had 17 firms employing a total of 3,012 workwomen at an average rate of $13.38 per week; in 1928, 16 firms employing 314 workwomen paid a weekly average of $12.89. For the rest of the province, 24 firms, employing 6,372 women, paid a weekly average of $12.04, as compared with 24 firms, employing 6,507 women and paying an average of $11.40 per week in 1928. In this industry, the Commission issued a number of permits to aged, infirm or handicapped workwomen, who for one reason or another were not in a position to earn the minimum salary to which their service in the industry entitled them. This enabled these workwomen to retain a permanent position instead of being deprived of the means of earning a living. The number of such permits is, however, so restricted as not to effect the standard scale of wages. At the end of the year there were 33 such permits in effect.

Printing Industry.—There were 103 firms in Montreal and district employing a total of 919 women in the printing industry during the period under review. The average wage was $12.68 per week, as compared with the average of $12.14 per week in 1928 paid by 105 firms employing 820 women. In the rest of the province, 31 firms employed a total of 201 women, the average wage being $10.02 per week as compared with the 1928 figures of 19 firms, 112 workwomen, and a weekly average wage of $7.92.

New Investigations.—The Commission is now making an inquiry into men's and women's clothing industry in which there are about 500 establishments, and is reopening the investigation begun in 1928 into the cardboard box and paper bag factories with a view toward placing these establishments on an equal footing with others of the printing and paper industry generally. An inquiry will also be conducted into the tobacco, cigar and cigarette industry owing to serious complaints having been made by workmen's unions.

The Board of Health of Manitoba recently despatched a travelling clinic to investigate reports of the existence of silicosis among miners employed underground in the Central mining area of the Province. The clinic is conducted by Dr. I. Sigvaldson, Mr. John Foggie, chief sanitary inspector of Manitoba, and Mr. C. B. Bodle, X-Ray technician. They will also make tests on dust conditions in the mines, using special equipment recently secured from Ontario.

The clinic was organized and despatched to the mines because of recent requests to have silicosis placed on the list of industrial diseases for which compensation is payable under the Workmen's Compensation Act. The expenses incidental to the work are being met by the mining companies.

WORKMEN'S COMPENSATION IN THE PROVINCE OF QUEBEC

Series of Regulations Issued by the Commission

SINCE the passing of the Quebec Workmen's Compensation Act and the Workmen's Compensation Commission Act in 1928 the Commission has issued rules, regulations and circulars from time to time on questions that have arisen in connection with administration of the Act. One of the circulars outlines for the benefit of insurers the procedure suggested by the commission for the prompt disposal of claims.

Medical and Hospital Treatment

The following statement is made on the question of the selection of a hospital by the injured person:—

"The Commission has received several complaints from injured workmen to the effect that employers have, in certain instances, refused to allow them to select the hospital of their choice in cases where there is more than one hospital in the vicinity.

"Subsection 1 of section 15 states very clearly that wherever there is more than one hospital, the injured person may select one of his own choice, and we feel it necessary to advise you by this circular that this right should not be interfered with. Self-insurers should guide themselves accordingly and we trust it may be possible for insurance companies, to so advise their policyholders by any convenient means."

Reference has been made in the Labour Gazette (December, 1929, page 1444) to the Commission's ruling that unqualified medical practitioners, such as bone-setters, are not recognized by them as medical practitioners for the purposes of the Act.

The Commission makes the following ruling to safeguard insurers in regard to hospital expenses:—

"In certain cases, it appears that workmen instead of taking advantage of the facilities provided for their treatment by the employer in cases of accident, present themselves at a hospital of their own choice where they are received without further formality, even in cases of minor injuries which ordinarily would not justify their admission to a hospital. Further, certain hospitals allow only doctors and surgeons on their staff to treat an injured workman and the doctor designated by the employer must discontinue his attendance on the patient as soon as he enters such a hospital. These practices, contrary to the letter and spirit of the Workmen's Compensation Act, are becoming so general that the Commission feels called upon to intervene. Interested parties will therefore please take note of the following rulings:—

"1. The Commission, failing an agreement to the contrary with the employer, will refuse to approve accounts submitted for hospital charges in all cases when it is shown that the injured workman without evident necessity, has been admitted by the hospital requesting settlement of an account.

"2. The Commission will refuse to approve the account of any hospital where the physician designated by the employer has not been admitted to visit and treat the injured workman.

"3. The Commission will refuse to approve the account of any physician who may have treated an injured workman without the authorization of the employer concerned, except in cases of urgent necessity or when the employer has not procured for the injured workmen the services of a physician."

Calculation of Wage Rates

The methods followed in calculating the amount of daily wages in cases of temporary total incapacity are described as follows:—

Workmen Engaged by the Month.—The daily wages are estalbished by dividing the monthly wages by 26, if, however, the workman usually works every day of the month, the monthly wages shall in that case be divided by 30.

Workmen Engaged by the Week.—The daily daily wages of a workman engaged by the week are established by dividing the weekly wages paid by 6, or by 7, if the workman usually works on Sundays.

Workmen Engaged by the Day.—The daily wages are established by the wages agreed upon for the day of the accident, and failing an agreement, by the wages agreed upon for workmen doing the same class of work.

Workmen Engaged by the Hour.—(a) Fixed Wages.—The daily wages are established by multiplying the rate per hour by the number of hours which comprise a normal day of work for the injured workman, at the time and place of the accident.

(b) Variable Wages.—The daily wages of a workman engaged by the hour and whose wages vary, either by reason of the rate per hour and/or the number of hours worked per day, are established by dividing the last pay received before the accident by the number

of days on which he has worked to earn the amount paid.

If the injured workman has worked less than one day, his daily wages are then determined by taking the average of the last pay received by workman employed in the same enterprise, following the method described in the preceding paragraph, or if there is no workman so employed, by taking a similar average for workmen in a like enterprise in the locality where the accident happened.

Workmen Engaged at Piecework.—The daily wages are established by dividing the last pay received before the accident by the number of days worked to earn this amount. If the injured workman has worked less than one day, the daily wages are then determined by taking the average of the last pay received by workmen employed in the same enterprise, following the method described in the preceding paragraph, or if there is no workman so employed, by taking a similar average for workmen in a like enterprise in the locality where the accident happened.

Note.—The daily wages shall include all allowances to the injured workman for board and lodging prior to the accident excluding any remuneration received for overtime.

When the daily wages of the injured workman have been established according to the foregoing rules, the compensation of $\frac{2}{3}$ of the daily wages so established shall be paid to the injured workman on the basis of 6 days per week, or on the basis of 7 days when the workman usually works on Sundays.

The ruling as to the apportionment of the expenses of the Commission was given in the Labour Gazette, February, 1929, page 180.

Another regulation deals with the subject of the disposal of claims in suspense at the expiration of the "healing period" of six months for which allowance is made in section 11, subsection (2) of the Act. The Commission points out that difficulties have arisen, chiefly due to the fact that $\frac{2}{3}$ of the daily wages may possibly exceed the indemnity based on $\frac{2}{3}$ of the annual wages applicable in cases of permanent partial incapacity. The instructions given in the above mentioned circular are therefore replaced by the following:—

Such claims in suspense as at the expiration of the six months' healing period may be classified under the following headings:—

(1) The injured person is able to resume work but still requires medical attendance.

(2) The injured person is unable to resume work at the expiration of six months from the date of his accident and the doctor is either not able to state whether there will be any permanent incapacity or alternatively estimate the degree thereof at the time.

"In cases coming under classification (1) above, where the workman at the end of six months has returned to work but still requires medical attendance, all charges in this connection shall be paid by the employer or the insured as long as such attendance is certified as necessary as the result of the accident. In other words, Section 15 of the Workmen's Compensation Act, 1928, is not limited to the healing period of six months.

"In cases coming under classification (2) above, the employer or his insurer should immediately advise the Commission of the annual wages on which the indemnity should be based and we will issue an award for provisional weekly allowance on this basis payable until the definite fixing of the compensation to which the injured person may be entitled, but in no case shall this provisional allowance exceed the weekly indemnity previously paid for temporary total incapacity.

"If at any time after the expiration of the healing period of six months, the surgeon's final report establishes that the injured person suffers no permanent partial incapacity, Form 16 should be forwarded to the Commission together with the Surgeon's Report, which will permit us to close our file and automatically cancel the provisional allowance previously accorded. It should be understood, however, that the injured person is entitled to $\frac{2}{3}$ of his daily wages at the time of the accident *for the entire period of total incapacity.* If the provisional weekly allowance was less than the indemnity payable for temporary total incapacity, the difference should be paid to the injured person before submitting Form 16.

"If the final medical report fixes a certain degree of permanent incapacity and same is approved, the Commission will issue its award with a special reservation as to the amounts paid to the claimant subsequent to the expiration of the healing period of six months."

Care of Injured Workmen

On the subject of the care of injured workman it is pointed out that Section 15 of the Workmen's Compensation Act, entitles the injured person, in addition to the compensation set forth in the Act, to the following advantages:—

(a) To all medical, surgical, pharmaceutical and hospital charges.

(b) To the supplying and normal renewing during the period of twelve months of prosthetic and orthopedic appliances the use whereof is deemed necessary.

Section 16 requires the employer to procure for the injured person the services of a physician speaking his language (English or French).

"The Workmen's Compensation Commission, not interpreting these provisions in a restrictive sense, is of the opinion that the words *medical charges*, etc., etc., include all the accessory and incidental expenses incurred as the result of the attention necessitated by the condition of the injured person. That is to say, the employer must bear all the expenses incurred in the treatment of the injured person, with certain exceptions which may be recognized by the Commission, and is obliged to make, at the proper time, all necessary advances of money for this purpose."

Tariff of Physicians, Nurses, Hospitals, Etc.

The Workmen's Compensation Commission published in January, in pamphlet form, a tariff of the value of the services of physicians, surgeons, nurses and hospital establishments attending the victim of an accident within the provisions of the Act. This tariff became effective as from January 1, 1930: Failing any agreement to the contrary, the charges for service must not exceed the figures stated in the tariff.

The Hospital tariff is as follows:—

1. For each day in hospital, including bed, board and attendance of orderly	$ 2 50
2. Operating room, major operation	10 00
3. Operating room, minor operation	5 00
4. Regional or intraspinal anaesthesia	5 00
5. No charge shall be allowed for a local anaesthetic.	

The Nurses tariff is as follows:—

6. For each day or night spent at patient's domicile by registered or graduate nurse, under supervision of physician	$ 5 00
7. For each domiciliary visit by registered or graduate nurse, under supervision of physician, including necessary dressings	1 00
8. For each day of nursing care by other than a registered or graduate nurse.	
(a) In cities of 10,000 or over.	3 00
(b) In other places than cities of 10,000 or over	2 00

The medical and surgical tariffs give the charges for ordinary practice, for operations, and for special treatments, and for the allowances made for consultation, mileage, etc.

Coal Mining Accidents in United States in 1929

In an article in the *Coal Age*, January, 1930, Mr. W. W. Adams, of the Accident Statistics section of the United States Bureau of Mines, states that while only tentative figures are available now, indications are that casualties last year will include 2,186 deaths, or 10 more than the number shown by final figures for the previous year. The fatality rate was 3·65 for each million tons of coal produced, as compared with the preceding year's rate of 3·78.

"It is too early," Mr. Adams states, "to determine the death rate per thousand men employed; that rate will not be known until all companies have reported to the Bureau of Mines the number of men they employed last year, which will hardly be before August or September of the present year. However, unless some material change occurred in the average daily productivity per man from the amount shown in the previous year, it is probable that the year 1929 will show a small reduction in the death rate per thousand 300-day workers as well as per million tons of coal produced.

"No one knows how many non-fatal injuries occurred, because a complete record of them is not kept, but it is known that for every fatality there are not less than 50 injuries causing disability for one day or more. On this basis it is estimated that at least one hundred thousand persons were injured. The average injury represents a loss of 15 days. Therefore the injuries which occurred last year represent at least one and one-half million days of disability. That was the 'healing-period'—the amount of time required for the injuries to heal sufficiently for the men to return to work. Lacking reports for injuries, the past year may best be judged by its record of fatal accidents alone."

The three outstanding causes of coal-mine fatalities—falls of roof and coal, haulage, and explosions of gas or dust—accounted for 81 per cent of all fatal accidents in 1929.

The writer points out that "modern methods and equipment have made it possible to produce a given quantity of work with fewer men and a smaller actual loss of life than was possible in former years when more primitive methods and equipment were used. The smaller loss of life, however, may conceivably become heavier in proportion to the number of men engaged than was the case when more men were killed and more men were employed. The great object of safety work, of course, is to reduce the actual number of lives lost, an accomplishment which has been achieved at many mines in recent years, but it is also essential that the smaller number of men required to do the work with modern equipment should have their occupations made safer so that they as individuals and as a group may have a more favourable life-expectancy than their predecessors had."

CANADIAN CONSTRUCTION ASSOCIATION

Proceedings at Twelfth Annual Convention, Quebec, 1929

THE twelfth annual convention of the Canadian Construction Association was held in Quebec City from January 28 to 30, with a registered attendance of over 200 delegates and guests, including a large delegation from the west. With every province represented, the convention was one of the most largely attended and successful in the history of the association. In his presidential address Mr. S. E. Dinsmore reviewed construction conditions in Canada. Touching on the operation of the wheat pools as a determining economic factor, the president said:—

"The withholding of western wheat from the market by the Wheat Pool lowered export trading and adversely affected railway earnings, but the wheat is still a negotiable form of wealth and will this year be sold and transported, perhaps at greater advantage to western farmers. More serious than the withholding of the wheat was the diminution of crop in 1929, both in the East and the West, caused largely by weather conditions entirely beyond human control. The crop of 1930 may entirely rectify this situation."

Continuing his outline of industrial activity during the past year, President Dinsmore observed that "although many classes of industry maintained a heavy production throughout the year, customary seasonal fall depression was more pronounced than usual and unemployment was reported from many centres as being unusually high. Despite these setbacks, however, Canadian business for the whole year has set many new records and has emphasized again both the industry and the resources of the Canadian people. Economists report that they see nothing alarming in the recession of business during the last quarter of the year, nothing to indicate any permanent slowing activity, and nothing to suggest that 1930 will not be a year of progress and prosperity.

"The year just closed has been, from a construction standpoint, one of the greatest in the history of the country. Construction projects amounted in value to $576,651,000 or more than 22 per cent in excess of our previous peak year. If business conditions continue as in the past, it is fair to estimate that 1940 will see Canada reach the billion mark in building construction projects."

The president advocated a more efficient credit system, and recommended a "levelling out" of construction activity, urging both federal and provincial governments to have their construction operations carried on during the slack period, thereby relieving winter unemployment.

Apprenticeship.—On the subject of apprenticeship he said: "There has been no serious shortage of building mechanics during the past year. This is rather a significient fact when we consider the great volume of construction completed. With the apprenticeship system which we have inaugurated in the Province of Ontario, the time is not far distant when there will be sufficient apprentices completing their time each year to take care of the increased construction which will come with the growth of our Dominion. We are glad to see British Columbia organizing an apprenticeship system, and we would urge that a similar system of training be commenced in each of the other provinces so that mechanics will be trained all over the Dominion in sufficient numbers to meet the requirements of our advancement and thus remove the necessity of bringing mechanics in from foreign countries."

Manager's Report

The report of Mr. J. Clark Reilly, general manager of the association, emphasized the progress reported in the registration of apprentices, and also the advances made in the formation of a "Construction Safety Association" under the authority of the Ontario Workman's Compensation Board for general contractors with payroll of $30,000 or over per annum.

Labour Disputes.—Mr. Reilly dealt with the record of labour disputes in the building industry as follows:—"During the past year, labour disturbances in the construction industry in Canada have not been of a very serious character. There were 26 strikes in all, 20 of which were for increases in wages, 3 due to union troubles, and 3 to other causes. These affected 5,595 employees and involved a total of 56,344 working days. Twelve of the strikes were settled in favour of the workers, 3 in favour of the employers, and 11 were compromised with resulting wage increases. Fifteen owed their settlement to negotiations between the parties involved, five to the offices of the Department of Labour, one to arbitration, one to replacement and four to return of workers. Nearly all these disputes took place in May, though there were three in September. Most of them were of comparatively short duration though one lasted for 38 days and another for 19 days."

Five-Day Week.—As regards the five-day week, Mr. Reilly reported: "The effort continues to have the five-day week of forty hours adopted in the skilled trades of our industry when agreements are being signed. This matter ought to be very carefully considered, both in the light of experience with this plan in the places where it has been tried, and as to its possible effects on our work. It should be specially recognized that conditions in factories and other forms of indoor occupations must necessarily differ from construction, where at best in Canada the work is highly seasonal. It should also be noted that attempts to institute this plan are usually accompanied with the demand for increased rates per hour, so as to bring the wage for 40 hours up to that previously earned in the 44-hour week."

Subsequently, the general contractors section of the organization registered its opposition to the five-day week because it considered it not applicable to the construction industry or to Canada owing to the climatic conditions.

Employment and Immigration

The convention adopted a resolution dealing with the maintenance of prosperity and Canadian development in which it recommended the Dominion Government to take action as follows:—

(1) "To take immediate steps to consult with the leaders of industry and economists with the firm intention of formulating a policy that will ensure the continued vigorous development of Canada which has been in evidence in recent years.

(2) "Further, having in mind the need for sustained employment, the industrial and commercial life of Canada should be so planned and directed that winter unemployment shall be no more than a period of slackening not imposing suffering and want on a large section of our population.

(3) "Further, in view of the fact that our population is limited, and that larger numbers of people are required to develop our resources, particularly agriculture, an aggressive policy be put into effect that will result in selected and properly directed settlement of a larger population into suitable empty spaces of the country."

Progress in Apprentice Training in the Building Trades

Mr. Joseph M. Pigott, of the Pigott-Healy Construction Company, outlined to the Convention the work of the Apprenticeship Committee during the past year.

You will recall, he said, that in the years 1919-1920 there was a very small construction program in this country. There was, at the same time, a scarcity of trained mechanics. A survey was made of the situation, and it was found that there were less than two hundred boys who were indentured in the building trades; less than two hundred boys in training to replace the mechanics. A number of our firms started a movement to revive interest in the question of apprenticeship and to encourage the taking on of boys on the part of employers. Year after year we conducted apprenticeship contests in different cities where we held our conventions. Boys were brought to these conventions from all parts of the country and were entered in the contest, and silver cups or prizes were given to these boys. Later, at the Canadian National Exhibition in Toronto, as a public feature, we constructed a building with apprentices and attached to it a big sign board drawing the attention of the millions of public that here were trades that were crying for men and pointing out the advantages of having a good trade. That building was quite a success in promoting interest in apprenticeship work.

The problem up to that time had been largely one of getting boys who would enter the trades and persuading the parents of boys that a gool trade in the building industry was a worth-while life's work for any boy. A survey that we made three years later showed that we had increased the number of boys three or four times. We had about four hundred at that time in the Dominion, but, of course, that was simply absurd. It meant that there was nothing being done. Then we made a study of the situation and we found that there were several factors that contributed to the condition; in other words, the apprenticeship business was dead, and we found that one of the biggest difficulties was seasonal unemployment, the fact that there were slack times in the winter, and the employers would not bind themselves to take boys on for four years and teach them a trade to carry them through the winter. We also found that, while a certain number of employers were willing to take boys on and carry them through the winter at their own expense, they objected very strongly to the principle of training boys for their competitors to take on

at the end of their training. So we had to meet these two big difficulties, and we finally worked out a plan, the essentials of which are briefly as follows:—

The New Plan.—The plan contemplated a system of indenture whereby a boy would be taken on by an employer for four years. To take up the slack time in the winter months it was felt that the boy should be put into a technical school, as a member of an organized plan, in his particular trade; that the boy should be paid for continuous employment, including period in school; and we were in favour of some form of assessment which would place the expense of training these boys on the industry as a whole instead of having it fall on the shoulders of the men who took enough interest in this work. Whether that assesment should cover the salary of the boy for the whole year or just the expenses while he was going to school was an open question, but after a canvas made all over the country it was decided that the whole industry should be used as a training ground for the boys and the boys be given a variety of training under a superintendent.

The Ontario Plan.—You may recall that we succeeded in having an Act drawn up in Ontario, at the time of the old Drury Government. It was the opinion of the Canadian Executive that we should concentrate on some one province, and it was decided, because the conditions were rather favourable at that time in Ontario, to endeavour to get the province of Ontario to enact enabling legislation covering apprenticeship in the province, and when that plan was in operation and the system found to be a success, that it might well be advocated and urged in other provinces. We knew and felt that the other provinces were equally interested with Ontario, but if we could get the Act through in one province it would make the work that much easier for the Governments in other provinces and for the employers there. The Drury Government had set up what they called an unemployment council, and there we found an opportunity to present a plan of this apprenticeship scheme, under the head of teaching boys trades so that they would not be in the ranks of the unemployed. The Drury Government did draw up an Act, but as you remember, there came a change in the political situation.

About two years after a large delegation waited on Premier Ferguson and explained the difficulties of the plan to him and asked him to give us enabling legislation to put this plan into effect. At that time, Premier Ferguson felt that, although he was in entire agreement with the whole idea, he took it under consideration, and in three or four days advised us that the Government could not, at that time, see its way clear to undertake this legislation because it involved tremendous expense, and he felt that if it was done for the construction industry, it would have to be done for other industries. At the same time he advised us to adopt the plan ourselves, put it into effect as far as we were able to do so and come back when it was operating and we had straightened some of the details out, and he would consider it again.

To show a demand for a system of this kind, employers generally, some manufacturers concerned, and the labour unions, all contributed funds for two years to put this aprenticeship plan into operation in Hamilton and Toronto quite successfully. The boys were indentured to employers, and in the winter time they were sent to technical schools. When we went back to Premier Ferguson, we went with a background. All the expense for this was being borne by only just a few employers who were willing to make the sacrifice in order to get it under way, and we did not labour the point with the employers refusing to pay their share. Organized labour has been very strongly in favour of this plan. In Ontario in particular they have been quite enthusiastic about this plan.

On the second occasion, Premier Ferguson decided that we had given a very good demonstration of the possibilities of this plan and he had a bill drawn up. The beneficial results of that Act I do not need to stress unduly.

Payment of apprentices.—I have spoken of the scarcity of men at that time. In 1912 the totals of construction in our country were less than $500,000,000, and last year we had roughly $600,000,000; and it is pointed out to you that the $500,000,000 of 1912 represent something like $750,000,000 to-day in building, so that we have not had a boom; we have had just a normal building year. We have for years felt the scarcity of men, that is of properly trained men; good mechanics have been getting fewer and fewer. We have all agreed and found that you cannot make a mechanic in a trade school, nor can you make a proper mechanic on a job without some supplementary technical training that has both a direct and an indirect bearing on this trade. We have been doing this for some years now, putting our apprentices into technical schools and paying them while they are there. We have found the plan gives excellent results; the boys come along very much faster and are very valuable after their three years. Some of these apprentices, after three years at the technical school, are quite as good as their fathers without the technical training.

Ontario Apprenticeship Act.—The Act briefly is this; it brings minors engaged in designated trades. We define designated trades as a trade which asks to be included in the Act and backs it up with the signature of a certain number of representative employers, and also by requesting that employees in trades be included and come in under the Apprenticeship Act. We now have nine designated trades that come under the Act in Ontario. Minors in these nine trades must, under the Act, be indentured to their employers and that agreement must be registered with the Inspector of Apprenticeship in Ontario. Certain conditions and regulations are laid down respecting the duties of the employers and also of the employees. Attached to this indenture contract is a set of general regulations and trade regulations, and, in some cases, very local regulations. These trade regulations in the various trades have been worked out by joint committees of employers and men, and the Provincial Committee has considered it advisable to give them as great a measure of liberty in that respect as possible.

It was the intention to set up under this Act Apprenticeship Committees in the different trades in the different cities. There we ran into difficulties. There were cities that had no unions at all for certain trades. There were other cities that had two unions in the same trade, and we found that it was going to be impossible to have peace and harmony, so that the Provincial Department of Labour simply appointed District Inspectors to control and govern the work, and these District Inspectors set up the trade committee to cover the work.

The Act provides that the boy must be properly trained; he must be sent to school at least eight weeks; he must be given continuous employment; he must be given a rate of wage which the board does not stipulate; but the board does set down the minimum that the boy should be paid. This was found necessary because we had contracts coming in from small towns with boys getting $5 a week. We had quite a veriety of rates being paid not only between different trades, but between one city and another in the same trade.

The Act, as I said, was merely a piece of enabling legislation, and it gave powers to the Committee to do a great many things, always subject to the consent of the Lieutenant-Governor-in-Council.

The Ontario Act was very largely patterned on the South African plan. There is a Provincial Committee consisting of the chairman, four members representing the employers, four members representing organized labour, and one man appointed by the Department of Education, Technical Branch. We have a Chief Inspector who has his office in the Parliament Buildings in Toronto, and has a staff under him there consisting of two or three mail clerks and two or three stenographers, and he has at the present time five district inspectors who have headquarters in Toronto, Ottawa and Windsor. The expenses of the administration of this Act have been borne by the Ontario Government. It has been the intention of the industry to eventually carry the cost of this work. In many of its aspects it is comparable to the Workmen's Compensation Board, when it was created, was assisted by the Province of Ontario by a grant of $100,000 a year until such time as the industry could carry the administrative cost, and they have been carrying that cost for the last year or two.

Technical Schools.—The position of the technical schools in this work is this: The Government has directed various technical schools in Ontario to provide such accommodation, such teaching and at such times as the Apprenticeship Board may require to have this work properly carried out. Except in one or two cases, we have met with wonderful co-operation and help from the Technical Schools. Quite a lot of progress has been made in the last year or two in this work. We have today over twelve hundred boys in Ontario indentured and learning trades. We have every reason to believe that at the close of 1930 we will have two thousand five hundred boys, as we have been gaining momentum each month. We have met with a great deal of trouble in carrying out this plan and putting it into force, owing almost entirely to a lack of understanding of its purpose. In the case, for instance, of the plumbing and steamfitting industries, the employers in these industries as a whole, outside of the City of Toronto, felt very strong objections to the whole Act, and it was practically impossible for the Inspectors to enforce any of its terms. The plumbing and steam-fitting industries failed to realize that we had not inflicted this Act on them, but we had applied it to them at the request of a number of employers of the trade, and we were simply carrying out the terms of the Act. We had a lot of hard work with the new employers, trying to explain the purposes of the Act, and it was not until the Government sent for representative employers from all cities of Ontario that all difficulties were cleared up, and these employers have gone back to indenture their boys and conform in every way with the terms of the Act.

Overcrowded Trades.—We ran into a rather peculiar situation in the industry. We had, I suppose owing to our inexperience, imagined that it would be difficult to get the boys, but we found out that this was not the case. It was hard to get boys in the plastering trade, but not in the others. We found that employers as a whole were quite indifferent in the majority of trades. We, therefore, knew that it was a matter of working on the employer to get him interested, and we found a trained man for the purpose. But we also, to our surprise, found that two trades, the plumbing and the electrical, were overcrowded; that these two trades were in a sense using minors as cheap labour. There we had an entirely different problem because we had to eliminate the surplus minors from these trades. We had, in the City of Toronto, 600 journeymen steamfitters and plumbers and we had 500 apprentices. None of these apprentices were indentured, and it was apparent to anyone that very few had learned their trade. Very few of these boys had continuous employment. The result was that the boy was wasting years during which he should have been learning a trade, and such men as were turned out were trained in a very indifferent fashion and were no credit to their business. We have had to meet this situation in this way; we have had these employers agree that they will indenture such boys in these trades as they feel they can safely pledge themselves to carry, and that, from now on the rest of these minors will be carried until they disappear. Either they run out of work and are laid off, or they leave, but no new boys can be taken on except under the terms of the Apprenticeship Act. At the same time, to meet that same overcrowding in the trades, we have had to lay down a temporary scale of wages running up to $13 a week until such time as the situation clears itself up.

Assessments.—We have had trouble in the brick and mason trades, to solve the problem of continuous employment, which threatened to become a serious problem. In these trades we found it necessary to set up some bureau or training house in order to train a sufficient number of boys to serve that trade. The need of assessment has been very urgent during all this time, but every one of these trades, in all of the work that they are doing, have asked that, as quickly as possible, the assessment feature of the Act be put into force. It is now being put into force. We have had the advantage of having clerks from the Workmen's Compensation Board to make a study of pay-roll returns and make calculations as to the cost of carrying on the work, and it is quite confidently expected that the assessment will be enforced and the money raised for the placing of boys in the school next winter. When the assessment feature is put into force, we are quite positive that the boys in Ontario who will then be learning a trade under a proper form of indenture will be at least 4,000, and we have to base our assessment figures on that number. We have had great assistance from the Workmen's Compensation Board. You will realize that the gathering of pay-roll data and figures is a very easy task when we have at our hand there almost all the data and figures that we require. At the same time, I am fully alive to the objectionable feature of tying any other work of this kind on to the work that is being done by the Workmen's Compensation Board, and we can only expect from this Board that, to a practical extent, they will furnish us with the results of the stamp and machinery that they have at their disposal, and so cut down our costs. At the outset I started this in Ontario with the idea of ironing out all troubles and making a practical application of various ideas, and it is to be hoped that other Provinces (I have in mind particularly British Columbia and Quebec) will follow suit. British Columbia at the present time, is about to enact legislation similar to ours. Quebec has been intensely interested in trade training and what might be called apprenticeship work, for many years. As I was saying, it is to be hoped that, as we work out this plan in Ontario, what is done there will be followed very closely by you members all over the country.

Mr. Pigott concluded his address with a tribute to the small group of men who had been labouring for many years, and particularly Mr. Carswell, Mr. Mero and Mr. Oakley, who, he said, "never hesitated to cancel any engagement they had to come to Toronto and meet me or any other member of the Board, or to meet a labour committee, at a moment's notice. I do not think that we can ever thank these men enough."

The City Council of Sudbury, Ontario, recently appointed the city building inspector, Mr. H. C. Roseborough, to act also in the capacity of safety inspector, with authority to make safety rules to govern the employment in the building trades. The new safety inspector stated that the provincial government had called attention to the number of accidents in the Sudbury area, but he pointed out that most of these occurred in connection with actual mining operations, and that accidents were infrequent in the city itself.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Winter Courses for Farmers in Quebec

The Quebec Department of Agriculture, at the request of rural communities, has decided to organize winter courses for the benefit of farmers. Seven hundred farmers were in attendance at a recent course held in Victoriaville. Agricultural experts and advisers also gave an abbreviated course to 600 farmers at St. Gabriel de Brandon, Berthier county, during January.

The Department of Agriculture has decided to hold a series of lectures in 25 rural constituencies of the province during the winter, in accordance with the development of Hon. J. L. Perron's program.

Class for Training Teachers at Windsor—Walkerville Technical School

A class for the training of teachers for evening courses has recently been established in the Windsor-Walkerville Technical School, under the supervision of Mr. Gavin, Principal of the Ontario Training College for Technical Teachers at Hamilton.

The class has been arranged, primarily, to suit the convenience of uncertified men and women who are now engaged in evening class teaching or those who plan to undertake such work. Heretofore, it has been necessary for candidates to attend the Hamilton College to receive instruction.

Foreman Training Plans

The Metropolitan Life Insurance Company recently published a booklet prepared by its Policyholders' Service Bureau entitled "Foreman Training Plans." It contains a selection of training courses given by prominent companies in various industries throughout the United States and Canada. The writer points out that "it is the realization both of the change in the relationships in industry and the necessity of developing 'key men' that is responsible for the enthusiasm with which foreman training, in one form or another, has been adopted by many of the progressive business organizations of the country within the last ten years. For the foreman, the opportunity for training is a great one. By a more intelligent understanding of his job and by friendly co-operation with his men, he is better able to control both the mechanical and human equipment of the shop, and finds an interest and pleasure in his work not possible before. To the men, it means a sympathetic atmosphere in which to work and a certain inspiration to do one's best. The management in return for its expenditure on training may profit from good-spirited teamwork, fewer accidents, a lower labour turnover, greater output, better quality of work on the part of both journeymen and apprentices, and improved workshop management."

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Railway Accidents in Canada in 1927

The 23rd report of the Board of Railway Commissioners for Canada for the calendar year 1927, just published, states that accidents to the number of 2,862, covering 353 persons killed and 3,091 persons injured, were reported to the Board during the year ended December 31, 1927, as compared with 2,517 accidents reported during the year 1926, covering 429 persons killed and 2,620 persons injured.

The figures given show:—

(1) Thirteen passengers killed in the year 1926 and 13 passengers killed in the year 1927. The number of passengers injured in 1926 was 329, as compared with 382 in 1927; an increase of 53.

(2) One hundred and thirty-two employees killed in the year 1926, and 101 in 1927; a decrease of 31. The number of employees injured in 1926 was 1,727, as compared with 2,051 in 1927; an increase of 324.

(3) Two hundred and eighty-four others killed in the year 1926, and 239 in 1927; a decrease of 45. The number of others injured in 1926 was 564, as compared with 658 in 1927; an increase of 94.

It is pointed out that of the 239 others killed, 121 or 50 per cent were trespassers, and that of the 658 others injured 131 or 19 per cent were trespassers.

Attention is again directed to the statement setting out in detail the situation as regards highway crossing accidents during the past five years. It will be observed therefrom that there has been a total of 1,362 accidents, covering 462 persons killed and 1,797 injured. Crossings protected by gates accounted for 25 killed and 82 injured; Crossings protected by bell accounted for 69 killed and 250 injured; Crossings protected by watchmen accounted for 3 killed and 50 injured; Crossings unprotected accounted for 365 killed and 1,415 injured.

There were 323 accidents at protected crossings, covering 97 persons killed and 382 injured. At unprotected crossings there have been 1,039 accidents, covering 365 persons killed and 1,415 injured. During the year 1927 there were 314 highway crossing accidents investigated, of which number 64 occurred at protected crossings, leaving unprotected crossings to account for 250 accidents.

Automobile accidents totalled 263, divided as follows:—At crossings protected by gates, 3; at crossings protected by watchmen, 8; at crossings protected by bell, 34; at crossings unprotected, 218.

Horse and rig accidents numbered 24 and pedestrian accidents 27.

During the year 1927 there were 317 highway crossing accidents reported to the Board covering 99 persons killed and 425 injured, as compared with 300 accidents reported in 1926, covering 129 persons killed and 370 injured.

Province of Quebec Safety League

The sixth annual meeting of the Province of Quebec Safety League was held at Montreal on January 17. The address of the President, Mr. E. J. L'Espérance, dealt for the most part with the automobile danger. In the industrial field he stated 28,600 accidents had been reported in twelve months.

The secretary's report pointed out that the Quebec League benefitted from the experience of the best safety organizations in Europe and on this continent, and enumerated the following safety organizations with which friendly relations were maintained.

The Canadian National Safety League.
Industrial Accident Prevention Associations of Ontario.
Ontario Safety League.
Maritimes Safety League.
British Columbia Safety League.
National Safety Council (U.S.A.).
International Safety Survey Department, League of Nations (Geneva).
National Safety First Association (Great Britain).
Swedish Association for the Protection of Workers (Sweden).
L'Association Fédérale de la Suisse Pour la Prévention des accidents et pour Hygiène Industrielle (Switzerland).
Association des Fonctionnaires Allemands et des Inspecteurs du travail (Germany).
Association of Belgian Manufacturers for the Protection of Industrial Accidents (Belgium).
L'Association des Manufacturiers Italiens pour la Prévention des Accidents Industriels (Italy).
New South Wales Safety First Association (Australia).
L'Association des Industries de France contre les Accidents du Travail (France).
Central Austrian Office Accident Protection (Vienna).

The League's activities during the year were considered under three heads, legislation, organization, and education. Under the first head the secretary stated that "the outstanding legislation enacted during the year and for which we make bold to exact our large share of credit—is the compulsory stop law at railroad crossings not protected by watchmen, gates or automatic signals. The law was passed during the last Session and was actually put in force on July 1st. The record of accidents for 6 months at railroad crossings showing a decrease in fatalities of no less than 33 lives, gives a clear idea of the wisdom of the Government's action.

During the past year the provincial government was asked to consider a proposal that boards of inquiry should be established in the larger cities to investigate all accidents. Under the head "organization" the secretary mentioned the Round Table Discussion Committee that had been organized during the past year in the industrial Section under the chairmanship of Mr. Allan M. Mitchell. Out of this committee were developed the Construction, the First Aid, and the Industrial Hygiene Committees.

Under the Heading "Education"; the secretary, Mr. Arthur Gaboury, referred to the work carried on in connection with fire drills, safety councils, workmen safety committees, and also to the extensive safety propaganda carried on by means of posters, leaflets, bulletins, calendars, etc.

Agenda for 1930.—The League's program of work for the coming year includes the following lines of action:—

Increase membership to cover the whole Province of Quebec.

Organize branches in all industrial centres and cities of the Province.

Resume as early as possible the regular publication of our official organ.

Carry on the organization of Safety Brigades in every school of the Province.

Organize Workmen's Safety Committees in all industries of the Province.

Obtain through the suggestion box system the workmen's view in Accident Prevention.

Increase membership of the Courteous Chauffeurs Club throughout the Province.

Increase membership of the Prudent Commercial Vehicle Chauffeurs Club.

Suggest amendment for the protection of window-cleaners.

Follow up scaffold inspection by-law.

Carry on organization of Aviation Safety Committee.

Ontario Safety League

The year 1929 was the sixteenth year of the Ontario Safety League's campaign in safety work. Early in the year an essay contest was held in the schools of Ontario on highway safety, $605 being distributed in cash prizes. During the second half of the school term a drawing contest on accident and fire prevention was held, with $400 distributed in cash prizes. During the full school terms an intensive campaign of lecturing on safety, illustrated with motion pictures and lantern slides, was carried on in the schools of the province in 79 different cities, towns and villages, 418 schools being visited and 179,000 pupils attending the lectures. Talks on "safe driving" were broadcast by radio, and literature distributed to over 4,000 garages in all parts of Ontario, in addition to a mailing list of several thousand. 550,000 special cards were distributed to motorists enclosed with 1929 licence plates, by courtesy of the Minister of Highways.

The list of literature distributed throughout the year includes 51,000 industrial bulletins and 64,500 special bulletins.

Ontario Mine Inspectors Study Rescue Methods

Four mine inspectors of the Province of Ontario, namely R. H. Cleland of Timmins, G. S. Jarrett of Sudbury, E. C. Keeley of Kirkland Lake, and Austin Neame, superintendent of the Timmins mine rescue station, took a ten-day course in mine safety methods at the United States Bureau of Mines Training Station at Pittsburgh, Pa., in January. Mr. D. C. Sinclair, chief inspector of Mines for Ontario, states that this course was taken so that the local inspectors might be familiar with the latest developments in mine rescue work, particularly in the emergency handling of equipment and general rescue methods.

Building Inspection at Sudbury

Building trades' workers at Sudbury, Ontario, recently addressed a letter to the provincial government asking for the immediate appointment of a building inspector for the district under the provisions of the Buildings Trades Inspection Act. This Act provides that "the Council of every city, town, township and village shall, by by-law, appoint a sufficient number of competent persons to be inspectors for the purpose of enforcing the provisions of this Act in the municipality;" and that "the Lieutenant Governor in Council may appoint inspectors to enforce this Act in territory without municipal organization."

The building workers alleged that large buildings had been erected in Sudbury without regard to the legal safety requirements, for example, the provision requiring that floor coverings be constructed for the protection of men working below. Specific cases where fatal or permanently disabling accidents were alleged to have occurred as a direct result of the neglect of local safety measures were cited, all of which, it was claimed, would have been averted had the municipalities appointed a safety inspector as required by law.

The Allan Mine Explosion

Reference was made in the LABOUR GAZETTE, September, 1929, page 963, to the dangers encountered by the miners from deadly gases in connection with the re-opening of the Allan Mine at Stellarton, N.S., following the severe explosion early last year. More recent information indicates that the use of oxygen breathing apparatus by trained men was of greatest assistance in the reclamation of the Allan workings, the danger from deadly gases being minimized and the work greatly facilitated by means of oxygen equipment.

The Dominion Coal Company is credited with being the first on the continent to adopt (twenty-two years ago) this method of combatting irrespirable gases, and thus make it possible to fight a mine fire at close quarters. Another feature of mine safety that is now regarded as having much to do with lessening the intensity of the explosion at the Allan shaft was the stone-dusting, which is a precautionary measure prescribed under the Coal Mines Regulation Act of the province.

Compensation for Occupational Diseases

Dr. Ethelbert Stewart, Commissioner of Labour Statistics of the United States Department of Labour, pointed out in a recent statement that there are three ways of covering occupational diseases in existing Workmen's Compensation laws. One is by listing the specific diseases which are to be held compensable; another is to blanket all occupational diseases; and the other is to use the word "injury" instead of "accident" in the Compensation Act. Dr. Stewart points out that most courts have construed "injury" in a sufficiently broad sense to cover any form of injury, while "accident" is construed as

specific as to time and place and as a mechanical thing.

The original plan, borrowed from England, was to list specifically by name in the statute the diseases for which compensation would be paid. England listed six, namely, anthrax, poisoning by lead, mercury, phosphorus and arsenic, and ankylostomiasis. England has added a few to its list in recent years.

Germany lists 23 occupational diseases which may be compensated; and Switzerland lists 80. Of the American States having specific lists, Minnesota lists 23 diseases, New Jersey 10, New York, 23, Ohio 18, Porto Rico 15.

"Administrators of compensation laws agree." Dr. Stewart states, "that a blanket law covering all occupational diseases is by far preferable to a list, no matter how liberal. A resolution to this effect was passed by the Buffalo convention of the International Association of Industrial Accident Boards and Commissions, which is an organization of administrators of workmen's compensation laws."

National Safety Council of Australia

The report presented to the second annual meeting of the National Safety Council of Australia, held on August 2, 1929, shows that while the Council has devoted much attention to the question of public safety, it has not failed to deal with the prevention of industrial accidents. Its activities in this latter field began in the form of a monthly service of safety posters to the affiliated firms, paying special regard to the psychology of Australian workers. Posters are supplemented by slips for insertion in pay envelopes. A poster competition was successfully organized and lectures have been given to a certain number of workers.

Industrial Museum in England

Reference was made in the Labour Gazette, February 1928 (page 162) to the establishment by the British Home Office of an industrial museum in Westminster containing a permanent exhibition for promoting the safety, health and welfare of industrial workers in the manufacturing industries which come within the sphere of Home Office administration. The establishment of the museum was decided upon, and the building erected, before the war, but the war began before it could be taken into use. During the war and for some time afterwards it was devoted to military uses. The restoration of the building to its pre-war conditions and the organization and collection of the exhibits was taken in hand in 1925, and the Museum opened in December, 1927. The exhibition is the first of its kind in England, though similar exhibitions have existed in important industrial countries on the continent for some time, e.g., in Milan, Berlin, Munich, Amsterdam, Paris and Lausanne.

The purpose of the Museum is to show the best methods for the time being which are known to the Home Office for protecting the industrial worker against accidents, and promoting conditions most favourable to his or her health and efficiency and it is hoped that it will contribute in this way not only to the well-being of the workers, but also to the efficiency of British industry. It is an axiom accepted by all progressive employers that the best conditions are necessary to secure the highest standard of efficiency and the maximum output.

The Museum is open to the general public between certain hours, but it is mainly intended for those who are directly concerned with the problems of safety, health and welfare in industry. Its main use is, according to a new handbook just published, for employers and workers and their organizations. It is designed to explain and illustrate the dangers to life and limb and health incidental to industrial processes, and to show the best methods of preventing them. It renders hardly less important service to designers of factories, designers and makers of machinery and power plants, makers of guards for machinery and other protective appliances, and designers and makers of ventilation plant.

The January issue of *Industrial Canada*, the monthly publication of the Canadian Manufacturers' Association, is largely devoted to subjects of industrial research. Special articles describe the extensive research work that is being carried on by the Dominion and by several of the provinces. A note in the issue states that "It was our desire in planning this special number to link up the present movement in the direction of expanding and intensifying research work in Canada with the Produced-in-Canada campaign. As has been pointed out on many occasions the effort to promote the sale of Produced-in-Canada goods to Canadian consumers must be founded on the production of goods of quality and value, turned out in efficient plants and at a minimum cost. . . . If the publication of this number succeeds in showing that research is at last being vigorously applied in Canadian manufacturing industry to the benefit of purchasers of Canadian products, it will have served its purpose well."

ALBERTA FEDERATION OF LABOUR

Proceedings at 14th Annual Convention, January, 1930

THE fourteenth annual convention of the Alberta Federation of Labour was held at Edmonton on January 13-15, with approximately one hundred delegates in attendance, presided over by president F. J. White, M.L.A. Among the speakers to address the convention at the opening proceedings were Hon. J. E. Brownlee, Premier of Alberta, and Mayor J. M. Douglas of Edmonton.

In the joint report of the president and secretary, gratification was expressed at the steady growth of the Federation as indicated by the increase in membership, and for the greater interest manifested in the work of the central body. The report drew attention to the unemployment situation, which it was claimed, was occasioned by the introduction of modern harvesting machinery, and by the publicity given to the increased building permits in Alberta cities during the summer months, which attracted many workers in the building trades to the province. The report also contained a review of the following legislative matters which had been dealt with by the executive during the year: Old Age Pensions; The Boilers Act; The Electrical Protection Act; The Superannuation Act; The Woodmen's Lien Act; Workmen's Compensation Act; Minimum Wage Act; New Mechanics' Lien Act; the new Mines Act; health insurance.

The treasurers' report showed total receipts, including balance from last year, amounting to $2,013.30, disbursements of $1,370.32, leaving a balance as at December 31, 1929, of $642.98.

The report of the Committee on Officers' Reports expressed gratification for the passing of the Old Age Pensions Act and the new Boilers' Act. Pleasure was also expressed for amendments to the Electrical Protection Act and the Civil Service Superannuation Act. In regard to the amendments to the later Act, the committee recommended that the minimum allowance of $30. per month be raised to $50. In regard to the recommendation of the executive board on the question of the natural resources of the Province, the committee offered the following amendment:—

That the Alberta Federation of Labour strongly urge the government of the province to give serious consideration to the development of a policy of conservation, and an aggressive and sound economic development of the resources under public ownership and control.

The committee made a further recommendation to the effect that the committee already appointed to investigate matters involved in the taking over and development of the natural resources be enlarged to include representatives from other independent groups, including a representative of the Civil Service Association of Alberta.

The recommendation of the executive as favouring a national system of radio broadcasting was concurred in by the committee.

The president and secretary were commended for their efforts before the Minimum Wage Board to have the minimum wage raised again to $14.

The committee suggested that the Federation request the government to enact legislation in regard to apprenticeship training similar to that covered by the Ontario Apprenticeship Act.

It was the opinion of the committee that the responsibility of caring for the immediate relief of the unemployed should be three-fold, borne by the Dominion, Provincial and Municipal authorities. The provincial government and civic councils were commended for the steps taken to provide winter work for the unemployed, and the committee concurred in the recommendation of the executive that a more comprehensive program of winter employment be inaugurated by the Dominion and Provincial governments covering mining and other industries where distress exists. The committee suggested that the incoming executive urge those in authority to hold a Dominion wide unemployment conference during the coming summer. As a permanent solution to the unemployment question, the committee recommended that the executive press for the enactment by the Dominion and Provincial Governments of unemployment insurance legislation.

The report of the committee was adopted by the convention.

Among the resolutions adopted were the following:

Recommending that the entire province come under the Minimum Wage Act;

Enactment of unemployment insurance legislation;

That all persons reaching the age of sixty-five years shall receive benefits under the Old Age Pensions Act of Alberta;

That entrance to all schools of higher education within the province shall depend solely on securing the required percentage of qualifying marks by examination, and that the total cost of pupils then attending be borne by the whole province;

Opposing the suggestion that members of the police forces of the province be prohibited by legislation from affiliating with organized labour;

Regulations governing the use of paint spraying machines;

Opposing the admission of Mennonites into Alberta at the present time;

Calling attention to building congestion in new mining camps;

Amendments to the Vehicle and Highway Traffic Act;

That all women workers in the province be brought under the eight-hour working day;

A six-hour day in the building construction industry;

Stricter enforcement of the dumping clause of the custom tariff;

A maximum work day of eight hours and a five day week;

That old age insurance of $40 or less per month be excluded from income under Old Age Pensions Act;

That the giving of any information in regard to violation of the Factories Act shall be treated strictly confidential;

Public holidays for all provincial and civic elections;

Amendment of the Criminal Code whereby those refusing work on account of low wages will not be liable for conviction on a vagrancy charge;

Legislation to control the charges of undertakers;

That the provincial government arrange a housing scheme for Alberta similar to that now prevailing in parts of the Australian Commonwealth;

That all married and single women, widows and deserted wives shall receive a pension at the age of sixty years;

That deserted wives come under the scope of the Mothers' Allowance Act;

Payment of Old Age Pensions to British subjects at the age of sixty-five years;

Appointment of an additional woman inspector for the catering industry under the Minimum Wage Act;

That all inspected steam boilers be in charge of a certified engineer;

That all engineers, when assuming or vacating a position in charge of a steam boiler shall notify the inspector;

That persons interfering with an engineer on duty shall be liable to imprisonment on conviction;

Financial assistance from the provincial government for miners' families in distress;

Enactment of legislation providing for the examination and licensing of all journeymen electrical workers and contractors;

That all colonization and transportation companies be held responsible for a period of two years for the welfare of persons they bring into Canada;

That only projectionists holding first-class Alberta certificates be permitted to operate motion picture projectors in all private screening rooms and in the Alberta censor's theatre;

Granting of first and second class licences to projectionists for the sum of $20 and an annual renewal fee of $2;

Payment of prevailing rates of wages and working conditions in the censor's theatre in Edmonton;

That the expenses of all isolation hospitals be borne either by the municipal or provincial boards of health;

More education in the schools and less in the homes;

Establishment of a free municipal court;

That mothers' pensions be paid until children are eighteen years of age.

In the election of officers, Fred J. White, M.L.A., Calgary, was re-elected president, and Elmer E. Roper, Edmonton, was re-elected secretary. Calgary was selected as the convention city for 1931.

NEW BRUNSWICK FEDERATION OF LABOUR

Seventeenth Annual Convention, January, 1930

THE New Brunswick Federation of Labour held its seventeenth annual convention in Moncton on January 14-16, 1930, President E. R. Steeves presiding. Among those who addressed the meeting were: Premier the Hon. J. B. M. Baxter, the Hon. Dr. H. I. Taylor, Minister of Health and Labour, and the Hon. E. A. Reilly, chairman of the New Brunswick Electric Power Commission.

Resolutions adopted were as follows:—

That coroners be required to hold an inquest into every fatal industrial accident;

More lessons in school and less homework for children;

Urging the workpeople of the province to join organizations affiliated with the Trades and Labour Congress of Canada and the American Federation of Labor;

Commending the work of the government in endeavouring to eliminate level crossings and dangerous curves in road construction;

Urging the Federal and Provincial governments to provide First Aid facilities and Safety First Codes on all work under their control;

Favouring provincial legislation to provide for minimum wages for women, mothers' allowance and old age pensions;

Urging the inspection of all electrical work and the examination and licensing of all workmen egaged in this trade;

Recommending that operators of steam boilers be required to pass an examination and hold a licence;

Advocating the appointment of a journeyman plumber on the Plumbers Examining Board of New Brunswick;

Favouring amendments to the Theatres and Cinematographs Act and in the revision of same that moving picture machine operators be consulted;

That tickets of a value of 50 cents and under be exempt from all tax;

Recommending that government printing be done within the province and bear the union label;

Urging all members of the international trade union movement in New Brunswick to support the *Congress Journal;*

Asking that fishing leases to sporting clubs be not renewed;

Requesting the appointment of a qualified boiler inspector;

Favouring salary increases to Commissioners of the Workmens Compensation Board.

In the election of officers, E. R. Steeves, Moncton, and G. R. Melvin, St. John, were elected president and secretary, respectively.

Wages and Hours of Labour in United States Lumber Industry

The United States Department of Labour recently published Bulletin No. 497 in its "Wages and Hours of Labour" series, giving information concerning the lumber industry in 1928. The data compiled cover 58,007 employees of 319 representative saw-mills in 22 states and 6,968 employees of 51 logging camps in 10 states. Only 18 of the employees in the saw-mills and 29 of those in the logging camps were females.

Average full-time hours per week for the wage earners of saw-mills, or the industry, were 56·6 in 1928 and 58·1 in 1925, a decrease of 1·5 hours per week, or 2·6 per cent. Average earnings per hour were 37·1 cents in 1928, and 35·7 cents in 1925, an increase of 1·4 cents per hour, or 3·9 per cent. Average full-time earnings per week were $21 in 1928 and $20.74 in 1925, an increase of 26 cents per week over the 1925 average or 1·3 per cent. The percentage increase of average full-time earnings per week was less than the increase of average earnings per hour because of the decrease in average full-time hours per week from 58·1 to 1925 to 56·6 in 1928.

Average full-time hours per week in 1928 for the various occupations in saw-mills ranged from 55·2 for resaw sawyers, trimmer loaders, and graders to 57·8 for log yardmen. Average earnings per hour ranged from 29·3 cents for log yardmen to 88·7 cents for head band sawyers and average full-time earnings per week ranged from $16.94 for log yardmen to $50.29 for head band sawyers.

Average earnings per hour for the employees in each occupation were computed by dividing the total of the earnings of all employees in the occupation during the representative week included in the study in any year by the total of the hours werked in the week by such employees. This method was used in computing average full-time hours per week for the employees in each occupation. Average full-time earnings per week for the employees in each occupation were computed by multiplying the average earnings per hour by the average full-time hours per week.

Average full-time hours per week for the industry increased from an index of 100·3 in 1910 to 100·5 in 1911 and 100·7 in 1912, decreased to 100 in 1913 and 1915 and to 91·8 in 1919, increased to 93·6 in 1921 and to 93·8 in 1923 and 1925, and then decreased to 91·3 in 1928. The decrease between 1913 and 1928 was 8·7 per cent.

Average earnings per hour decreased from an index of 97·3 in 1910 to 95·1 in 1911, increased to 96·2 in 1912 and to 100 in 1913, dropped to 91·4 in 1915 and increased to 194·6 in 1919, dropped abruptly to 166·5 in 1921, increased to 180·5 in 1923, decreased to 178 in 1925 and then increased to 184·9 in 1928. The increase between 1913 and 1919 was 94·6 per cent and the decrease between 1919 and 1928 was 5 per cent.

Average full-time earnings per week decreased from an index of 97·6 in 1910 to 95·6 in 1911, increased to 96·7 in 1912 and to 100 in 1913, decreased to 91·5 in 1915, increased to 178·8 in 1919, decreased to 156·5 in 1921, increased to 169·9 in 1923, decreased to 167·6 in 1925 and then increased to 169·7 in 1928. The increase between 1913 and 1919 was 78·8 per cent and the decrease between 1919 and 1928 was 5 per cent.

TRADES AND LABOUR CONGRESS OF CANADA

Legislative Program Submitted to Dominion Government

THE executive council of the Trades and Labour Congress of Canada, consisting of Messrs. Tom Moore (president); J. T. Foster, R. J. Tallon, and Controller Jas. Simpson (vice-presidents), and P. M. Draper (secretary-treasurer), presented to the Dominion Government, on January 22, its annual legislative program. The members of the Government present were: Right Hon. W. L. Mackenzie King, Prime Minister; Hon. Peter Heenan, Minister of Labour; Hon. P. J. Veniot, Postmaster General; Hon. C. A. Dunning, Minister of Finance; Hon. J. C. Elliott, Minister of Public Works; Hon. Ernest Lapointe, Minister of Justice; Hon. Dr. J. H. King, Minister of Pensions and National Health; Hon. Chas. Stewart, Minister of the Interior; Hon. W. D. Euler, Minister of National Revenue, and Hon. Lucien Cannon, Solicitor General.

After introductory remarks by the president of the Congress, Mr. R. J. Tallon, vice-president, read the program as follows:—

Many of the matters which we have the honour to herewith submit on behalf of our affiliated membership have been the subject of detailed presentation on previous occasions. For the sake of brevity a number of them are only referred to by title, but this should not be considered as signifying that they are not of equal importance with those to which fuller reference is made or that there is any less keen desire on our part for favourable action thereon. Needless to state on all matters submitted for your consideration we shall be glad at any time of the opportunity of furnishing further information desired, or of discussing them more fully with members of the Government especially interested in the same.

Marine Matters.—Our request for amendments to the Shipping Act have been refused during the past two years mainly for the reason that there could not be any revision of this Act until the Committee on Marine Matters of the Imperial Conference, 1926, had completed its work. It is our understanding that this committee has met, Canada being represented by the Hon. Ernest Lapointe, Minister of Justice, and agreement reached on matters which might involve other changes in the Canada Shipping Act. We, therefore, respectfully request that the Act be amended during the forthcoming session of Parliament to give effect to our proposals respecting the conditions of marine engineers, viz: that the organization affected be granted representation on the examining board for marine engineers; appointment of a qualified engineer to sit as a commissioner with the Wreck Commission on all cases; that a Health Inspector be appointed at each important port in Canada with power of inspection on Canadian ships; changes in the method of computing horse-power on steamships, and revision of the section dealing with coastwise trading so as to exclude from Canadian port-to-port trade ships other than those built in Canada, owned by Canadians, manned by Canadian seamen and registered in Canada, with a view of permitting ships of other countries to enter this trade only under proper duties; that a duty be placed on ships used exclusively in Canadian trade which are built or repaired outside of Canada, and assistance thus given in providing employment in the ship-building trades; and adoption of the eight-hour day for marine engineers.

If, however, it is decided not to undertake a revision of the Shipping Act this year we would urge that Section 641 and Section 666 of the Act be amended so as to apply to all vessels fitted with internal combustion engines and that the ratio used in determining horse-power of such engines be that used by the Board of Trade, viz: 560 brake horse-power equal to 100 nominal horse-power and that this ratio be incorporated in the rules and regulations for the examining and licensing of motor engineers.

Re-enactment of Technical Education Act, 1919.

Curtailment of veto power of the Senate.

Amendments to the British North America Act.

Criminal Code Amendments.—The efforts of the Government to secure amendments to the Criminal Code respecting sedition, freedom of speech, assembly, etc., as introduced to Parliament by the Minister of Justice have, we note, met with defeat for the seventh time in the Senate. We trust that the Government will persist in its efforts to restore the Criminal Code in these respects as it was prior to 1919, and that legislation for the purpose will be again submitted to Parliament during the forthcoming session. Further amendments urged for the past several years to re-insert the clause defining and legalizing peaceful picketing previously contained in Chapter 12, Section 173 of the Consolidated Statutes of Canada, 1886, are again reiterated.

I.L.O. Conventions.—That legislation be enacted to give effect to such of the conventions and recommendations emanating from the conference of the International Labour Organization at Geneva as come within the jurisdiction of the Federal Government and in particular with respect to: (1) Eight-hour day; (2) One day's rest in seven; (3) Seamen's articles of agreement; (4) Unemployment and unemployment insurance: (5) Immigration and Emigration, (*a*) compilation of emigration statistics, (*b*) protection of women and girl immigrants on board ship; (6) Concerning greater safety in loading and unloading ships.

In respect to this a resolution was adopted at our last convention requesting the Government to appoint a Royal Commission, with representatives of labour thereon, to investigate conditions of employment in the work of loading and unloading vessels and to obtain information relative to the necessary legislation required for the protection of workmen employed in this work.

The request is also reiterated that steps should be taken to secure greater interest on the part of Provincial Governments in such matters as come within their jurisdiction, and for that purpose the Dominion Government should arrange for annual interprovincial conferences to deal with these international labour conventions and recommendations and endeavour to reach agreement for the inclusion of Provincial Government representatives in the Government delegations attending the annual conferences at Geneva.

Militia Act Amendments.—In respect to the use of armed forces during industrial disputes.

Cadet Training.—That all money grants for cadet training and other military training in schools be abolished, and grants for non-military physical training be substituted therefor.

Prison Reform.—That steps be taken to give effect to the report of the Government Commission (1921) on this matter.

Letter Carriers Conditions.—Failure to grant any increases in salaries to letter carriers compels us to bring this matter once more to your attention. (The resolution unanimously adopted by the Trades and Labour Congress at the Saint John Convention held in August, 1929, setting forth the grounds on which the requests for salary increases are based and also reiterating the suggested legislative changes necessary to break the existing deadlock, was submitted).

In view of the fact that all parties in the House of Commons agreed last session on the necessity for improvement in salaries paid letter carriers and that such requests are approved by the public at large, we feel that the Government should accept the responsibility of devising some method whereby the existing unfair conditions can be corrected.

This opportunity is taken to express appreciation to the Postmaster-General for compliance with our previous requests for the recognition of New Year's Day as a legal holiday for letter carriers and we trust this may be extended to include Christmas Day, believing that this can be done without serious public inconvenience.

Federal Office Cleaners.—Attention is again directed to the necessity of improved conditions being established for federal office cleaners, and we would urgently request that these underpaid workers be granted an increase in pay and placed on an annual salary basis as permanent employees with privileges of sick leave, holidays with pay and superannuation.

Bankruptcy Act Amendments.—To give priority to wage claims over other creditors.

Taxation.—It is gratifying to note that a further reduction was made in the Sales Tax during the last session of Parliament and we would request the total elimination of this tax, which in our opinion is an obstruction to business and places an unfair burden on people of small means.

We again reiterate the suggestion that no further reduction should be made in the Income Tax which might result in the reduction of the national revenue beyond a point where proper provision can be made to fulfil the State's obligation to protect those who, through unemployment, sickness or old age, find themselves unable to provide the necessities of life.

Canada Marking Act.—To be extended to apply to the boot and shoe industry.

Railway Act.—That this Act be amended so as to require the Board of Railway Commissioners to deal with applications submitted on behalf of railway employees seeking amendments to existing orders in the same manner as those made by railway companies or shippers.

Electoral Reform.—The amendments made to the Election Act at the last session of Parliament bring into force a number of suggestions for electoral reform that we have offered from time to time, but we note with regret that provision for a half holiday with pay was not incorporated in the Act and we would again urge that this request be com-

plied with; also that the Senate and House of Commons Act be amended so that members, once elected to the House of Commons, should not be compelled to seek re-election upon acceptance of a position as a Minister of the Crown.

Alien Labour Act.—Paragraph 13 of this Act restricting its application to certain countries largely nullifies the entire purpose of the Act, and we therefore request that this section be deleted and that the Act be placed under the administration of a Minister of the Crown.

Co-operative Legislation.—To encourage co-operative trading in Canada and facilitate inter-provincial trading by such societies.

Calendar Reform.—For a great number of years calendar reform has been the subject of international consideration, but the most definite progress has been made since it was submitted to the assembly of the League of Nations in September, 1926. The special committee of the League, to whom this matter was referred for study, decided upon a general inquiry which was addressed simultaneously to governments, religious and principal international associations including the International Labour Office (Geneva), and the International Federation of Trade Unions (Amsterdam). From the many replies received it was ultimately concluded that the study of this question ought to be continued in each country in liaison with the League, which would then be in a position to consider what steps could be taken with a view to international agreement. The proposals for Calendar Reform are endorsed by the Trades and Labour Congress of Canada, and we believe that the Government of Canada should establish a national committee in harmony with the recommendations of the League of Nations. Should this be done the Congress will be glad to co-operate on the same.

Radio Broadcasting.—The report of the Committee on Radio Broadcasting meets with our approval, establishing as it does the principle of national ownership, and we trust that legislative effect will be given the same at the forthcoming session of Parliament.

Industrial Disputes Investigation Act.—Amendments with respect to the form of declaration in applying for establishment of a Board.

Unemployment and Unemployment Insurance

The following memorandum on unemployment and unemployment insurance was read by vice-president Simpson:—

"On a number of previous occasions we have dealt with the question of unemployment and submitted comprehensive proposals which we believed would lead to the mitigation of unemployment and provide necessary relief for those affected thereby. These were summarized in the memorandum on this question presented to you last year, and to which, without repeating the same in detail, we respectfully desire to again direct your attention.

"Representatives of the Congress were privileged to participate in the inquiry into industrial unrest by the Royal Commission of 1919, in the National Industrial Conference of the same year and the Federal-Provincial Conference on Winter Employment of 1924, all three of which made valuable recommendations respecting unemployment and unemployment insurance.

"Whilst no action has yet been taken to give effect to many of these, yet it is encouraging to note the more general acceptance of the recommendations of the conference on winter employment that building and construction activities should be carried on more extensively during winter months, and the Government is to be commended for the support given this movement as demonstrated by the large number of contracts let during the past few months. By this provision of work the volume of unemployment has been materially lessened.

"We also wish to offer our sincere appreciation to the Government for having passed the Order in Council of August last restricting the admittance of contract labour into Canada, which action is also in harmony with one of the recommendations of the previously mentioned conference and which has undoubtedly been a factor in reducing the volume of unemployment.

"The adoption by several provinces of the Federal-Provincial Old Age Pension Act has provided a partial maintenance for approximately 40,000 aged workers without forcing them to compete for casual jobs in an already over-crowded labour market, and to this extent further aided in relieving unemployment.

"Notwithstanding these favourable actions, however, coupled with the efforts of provincial and municipal authorities to provide work, there is still an acute unemployment situation existing in most industrial centres throughout the Dominion. In a rigorous climate, such as obtains in Canada during the winter months, it is imperative that food and warm shelter be provided for those so unfortunately placed.

"We cannot agree with the declaration of the Government that this is entirely a responsibility of provincial and municipal authorities, and suggest that public welfare will be best advanced by a generous interpre-

tation of the British North America Act in dealing with a matter of such grave importance to thousands of Canadian citizens.

"It will, we think, be generally admitted that influx of workers through immigration, policies in respect to trade and commerce, tariffs and similar matters over which the Dominion Government have authority, are important factors in regulating the numbers seeking work and the opportunities for employment available from time to time. For these reasons we would urge sympathetic consideration by the Government of the appeals being made by municipalities throughout the Dominion for federal assistance in coping with the present unemployment situation, and that financial aid should be given wherever it is found to be warranted. In further support of this we would emphasize the fact that there are in Canada a large number of workers engaged in development work, who, because of the nature of their occupation, find it impossible to establish long residence qualifications in any one community, and who, though often the greatest sufferers when unemployment is most acute, cannot therefore get relief from any particular municipality or province.

"We fully realize that whatever measures of this nature might be taken they will only provide temporary relief, and do not remove any of the fundamental causes of unemployment. As one means to this end we again respectfully press for action by the Federal Government which would lead to the initiation of a national system of unemployment insurance based on compulsory contribution derived from the employer, state and the employee.

"The high hopes held that the report of the Parliamentary Committee of the session of 1928 might lead to the immediate enactment of such a measure have not been realized, the report submitted to Parliament during the 1929 session being, in some respects, less favourable than that of the previous years. The need is admitted, however, of legislation of this character and as a step towards securing the co-operation of the provinces we would urge the Dominion Government to call a conference of representatives of the Provincial Governments with the object of reaching an agreement which would make possible the early establishment of a national system of unemployment insurance."

Tariff Board Representation

The following memorandum on labour representation on the Advisory Tariff Board was read by Secretary-treasurer P. M. Draper:

"The Trades and Labour Congress of Canada was one of the first national organizations to recognize the importance to Canadian industry of a properly constituted tariff board and whole-heartedly worked for the establishment of the same. When the present Tariff Board was created by Order in Council in April, 1926, there was considerable disappointment in the ranks of organized workers that the requests of labour for representation thereon had been ignored. Other groups, notably the farmer and manufacturers' organizations were given consideration, but up to the present no action has been taken to enable the workers' viewpoint to be properly brought to the attention of the Board.

"We are aware that Labour has the same liberty as others of presenting briefs on any specific case, but owing to the numerous matters being dealt with by the Board this would call for the maintenance of a permanent representative at Ottawa to handle such matters, and would involve a financial burden which other groups are not called upon to bear.

"Labour has always desired to co-operate in constructive activities and believes that membership on such a Board would provide an opportunity not only for protecting workers' interests, but also from its experience in industry of contributing something of value towards the solution of the many problems with which the Tariff Board is constantly faced.

"The Government has recognized on many occasions the value of the co-operation of organized labour on numerous boards, commissions, etc. At the present time such representation is accorded it on the Dominion Council of Health, the Employment Service Council of Canada, the National Research Council, the Canadian Engineering Standards Association, the Canadian National Railway directorate and the Railway Commission, in addition to a number of other national bodies of a non-governmental nature.

"The Tariff Board, dealing as it does with questions which vitally affect industries upon which Labour depends for employment, cannot be classed as less important to Labour than any of the foregoing, and we therefore, once again, most strongly urge that the Government will give immediate and favourable consideration to the appointment on the Tariff Board of a Labour representative chosen in agreement with the Trades and Labour Congress of Canada."

Colonization and Migration

The memorandum on Colonization and migration was read by Vice-president J. T. Foster, and was as follows:

"The Department of Immigration and Colonization is one which must necessarily play

an important part in the development of Canada and in our opinion the matters coming within its jurisdiction are of sufficient magnitude to warrant the full attention of a Minister of the Crown. We are, therefore, opposed to this Department being merged with any other, but do strongly urge the immediate creation of a Dominion Advisory Council on Immigration on which Labour shall have representation and which would co-ordinate Federal, Provincial and other immigration activities, prevent overlapping of same and formulate policies suitable to conditions as they exist from time to time.

"The necessity for this proposal, which has been submitted to the Government on numerous occasions during the past several years, will become greater if the present plans are completed for the transference of the administration of their natural resources to the three prairie provinces. Colonization, we consider, should take precedence at all times over immigration activities, and with the added authority which will be given to the prairie provinces, and the increased activity in other provinces in respect to land settlement, overlapping is liable to become more prevalent unless there is a strong central authority capable of co-ordinating these efforts for the common good of the Dominion as a whole.

"We again reiterate that Canadian citizens should be encouraged to settle available lands before immigrants are sought from other countries, and that equal assistance should be made available to them as is given to immigrants.

"The regulation of the influx of immigration to such as can be properly absorbed in our national life is becoming increasingly important in view of the rapid development of machine production both in industry and on the farm, and in this respect we wish to express our appreciation of the Order in Council passed in August last restricting the entry of contract labour. This is in harmony with the policies of practically every industrial country, and we trust will be maintained as a permanent policy of the Government.

"We also note with gratification the action of the Government in restricting the numbers admitted under the railways agreement and believe that the prevalent unemployment, especially amongst casual workers, justifies further restrictions, or the complete abolition of the railway agreements as recommended by the Parliamentary Committee of 1928.

"Briefly summarized our proposals are for the maintenance of the Dominion Government's responsibility for selection and control of immigration; co-operative effort with the provincial authorities in the matter of placement, settlement and supervision of immigrants; equal assistance to Canadian citizens as that given to those from overseas countries, and that a vigorous campaign be instituted to make such opportunities more widely known in Canada; for the non-renewal of the railway agreements; the formation of a National Advisory Council with adequate Labour representation thereon; closest co-operation with the Employment Service Council of Canada in respect to the issuing of permits for the admission of contract labour; for the deportation of those entering Canada under assisted immigration schemes or exempt class regulations who within twelve months seek or accept employment in other occupations; that any government, corporation or person soliciting immigrants for Canada shall be financially responsible for same for not less than one year; for the equal inspection of immigrants irrespective of whether they travel by first or third class passages; against further oriental immigration; abolition of all bonuses or grants to private agencies; that the British Government be requested to assume fuller supervision and control of immigrant booking agencies operating in the British Isles; for the securing of equal rights of entry to United States for all Canadian citizens irrespective of their place of birth; for the gathering and international exchange of emigration as well as immigration statistics in accordance with the recommendations of the International Labour Office, Geneva, and for the change of the name of the Department to "Colonization and Immigration" so as to emphasize the greater importance of proper colonization in the building up of this country over that of securing new immigrants.

Fair Wages

The question of fair wages on Government contracts was dealt with by President Moore, who stated:—

"Many years of experience have proven conclusively that the present Fair Wages Regulations of the Federal Government, based as they are upon a resolution adopted by Parliament in 1900, are insufficient to give the protection to workers which we believe Parliament intended.

"Developments during subsequent years, especially in respect to Government-owned railways, harbours, etc., have introduced new factors into the situation which have added to the difficulties of properly administering the Fair Wages Regulations.

"In seeking at this time to have the Government introduce a bill giving statutory auth-

ority in respect of payment of fair wages, etc., we do not wish it to be considered as reflecting in any manner on the administration of the present regulations by the Minister of Labour. On the contrary we have received every assistance from the Labour Department in such matters, and are convinced that failure to deal satisfactorily with some of the abuses which occur from time to time is directly attributable to the Minister's lack of authority, and absence of proper provisions in the present Fair Wages Orders in Council.

"The present regulations can only be applied where they are made part of the contract by the Department of the Government or other authority concerned, and where failure to make such provision occurs then the worker has no protection whatsoever. Further, we are advised that as the contracts are between the Government or its agents and the contractor that the worker has no legal recourse to enforce these conditions of the contract.

"Our purpose in seeking an Act of Parliament respecting the payment of fair wages is primarily to correct this condition and to ensure that such provisions will be enforcible wherever the Government has authority to apply the same.

"As early as 1904 the section of the Labour Department's report respecting application of fair wages, recommended that in order to avoid expensive litigation in respect of enforcement of fair wages regulations full power to deal with such matters should be given to the Minister, and in the Draft Bill now submitted we seek to give effect to this particular recommendation. As the report was signed by the present Prime Minister, the Right Hon. W. L. Mackenzie King, who at that time occupied the position of Deputy Minister of Labour, we trust that this clause will receive the full support of the Government.

"Difficulty has occurred during the past few years in having Government fair wages clauses properly applied on works carried out by Harbour Commissions set up by the Government, whilst the situation in respect to the government-owned railways is almost a chaotic one. That section of the system which was formerly the Intercolonial Railway and the Government railways are still held as coming within the provisions of the present fair wages regulations. Other parts of the system which were formerly the Grand Trunk, Canadian Northern, etc., are not covered by these regulations, but do come under Section 244 of the Railway Act which provides for the payment of 'current' wages for railway construction only.

"It is well known, however, that other large construction works, such as hotels, etc., are being financed by the Government for the Canadian National Railways. The anomalous situation arises, therefore, that on the smallest contract let on the Intercolonial Railway the Government Fair Wages Regulations apply, but that a hotel costing several millions of dollars, such as that now being erected in Vancouver, is entirely exempt from these regulations and only subject to such provisions as the railway company itself may insert in the contract.

"Subcontracting and division of the work whereby some portion, though an integral part of the contract, is often done away from the job, has led to many evasions of the provisions of the fair wages regulations.

"The proposed bill would bring within its provisions all work which could be properly considered as being specially made for the job irrespective of where the manufacture or assembly may occur.

"The aim of the present draft bill, in brief, is to ensure that Government fair wage regulations shall apply to all contracts let by the Government; on supplies purchased by the Government (except those of a general standard character); on contracts let by Harbour Commissions or similar bodies financed by the Government; or by the Canadian National Railways, or other similar companies in which the Government owns all, or the major portion, of the stock.

"Provision has also been made in the draft bill to cover works in connection with development and operation of water powers as outlined in the Order in Council of December, 1929, and as far as possible to make the provisions of the Act, especially as regards hours of labour and wages paid, applicable to firms operating under bounty or subsidy from the Dominion Government.

"Another section of the Act aims to ensure the observance of fair wages conditions to Government works done by day labour as difficulties have arisen in some cases because of such work being carried on in a district at lower rates than the contractors were called upon to observe. A change is made in the draft bill in respect to the method of determining what are fair wages. The present regulations do provide for the recognition of conditions established by agreement between employers and trade unions, but where such does not exist then in determining what rates should prevail, the Minister is bound under the present regulations to take cognizance of the most unfair contractors and the best that can be established is a compromise between these and contractors paying fair wages.

"Our proposals follow more closely the established practice in Great Britain of recognizing only standards generally established by contractors paying the higher wages in the district.

"Another important provision of this draft bill is the recognition of the eight-hour working day in accordance with the Washington convention of 1919.

"Serious wage losses to workers have often occurred in the past because of the absence of schedules being incorporated in the specifications. We believe that it would also be of great value to contractors if schedules were always prepared for all jobs so that they would be estimating on an equal basis. Workers should have an opportunity to correct any errors in such schedules before the contract is signed. Under present practice the jobs have often proceeded for some time before errors in wage rates can be corrected and recovery of this difference in such rates has not always been obtainable.

"The draft bill also incorporates a provision that money due to workers, who after a reasonable period cannot be located, should become the property of the Government, or other authority letting the contract, and not revert to the contractor. The present system provides an incentive to unscrupulous contractors to delay payment of just claims as long as possible knowing that many workers will have moved away in the meantime, and that they will therefore not be called upon to pay money due to the workers. We have suggested also that contractors persistently refusing to observe their obligations on public contracts should be penalized by being debarred from contracting on such works for a period of one year and thus give the fair contractor the benefit of executing such contracts.

"The provision in the present clauses providing for inspection by clerks of works, etc., have never been observed by any department, and we therefore suggest that all such inspection should be under control of the Minister charged with the administration of the Act.

"In general many of the clauses of the proposed bill follow closely provisions already embodied in the existing Fair Wages Regulations with alterations which have been previously proposed to the Government from time to time and such other additions as long experience has convinced us are necessary if the workers are to receive the benefits from fair wages provisions in contracts to which they are justly entitled.

"We respectfully urge, therefore, that this draft bill be accepted and introduced as a Government measure during the forthcoming session of Parliament."

The Prime Minister complimented the Congress executive on the presentation of the program, after which the various items were discussed at some length.

Other Members of Delegation

Members of affiliated organizations who accompanied the congress executive were: J. W. Bruce, organizer, United Association of Plumbers and Steamfitters; A. Bastien, Canadian representative, American Federation of Labour; Jas. Somerville, vice-president, International Association of Machinists; W. Coyle, vice-president, International Brotherhood of Boilermakers, Iron Ship Builders and Helpers; A. Bell, vice-president, and A. J. Crawford, organizer, International Association of Sheet Metal Workers; B. J. Hiscock, vice-president, International Association of Bridge, Structural Iron Workers; F. Molineux and C. R. Gervais, organizers, Brotherhood of Painters, Decorators and Paperhangers; W. G. Powlesland, vice-president, International Brotherhood of Blacksmiths, Drop Forgers and Helpers; J. J. Reeves, president, Federated Association of Letter Carriers; A. Martle, executive board member, and J. F. Marsh, organizers, United Brotherhood of Carpenters and Joiners; E. Ingles, vice-president, and J. Noble, general representative, Brotherhood of Electrical Workers; W. F. Bush, executive board member, United Garment Workers' Union; F. Healey, organizer, International Union of Steam and Operating Engineers; J. Ward, vice-president, International Association of Operative Plasterers; L. Beuloin, vice-president, T. Broad, executive board member, and J. Corbett, chairman, Joint Protective Board (central region C. N. Railways), Brotherhood of Railway Carmen; J. G. A. Decelles, chairman, Executive Board Commercial Telegraphers' Union of North America; W. V. Turnbull, vice-president, and W. Jewkes, secretary, C.P.R. system federation, Brotherhood of Maintenance-of-Way Employees; Gerald Murphy, vice-president, International Moulders' Union; A. D. Dear, vice-president, International Association of Fire Fighters; A. D'Aoust, vice-president, International Brotherhood of Papermakers; T. O'Reilly, vice-president, National Association of Marine Engineers; J. Pelletier, representing International Brotherhood of Bookbinders; Chas. Dickie, secretary, Division No. 4, Railway Employees Department, A. F. of L.; J. L. Smith, representing Journeymen Stonecutters Association; W. A. Rowe, representing Brotherhood Railway and Steamship Clerks, and Wm. Golby, representing International Photo Engravers' Union.

REQUESTS OF LABOUR ORGANIZATIONS FOR NEW LEGISLATION

Ontario Executive Committee of Trades and Labour Congress of Canada

The Ontario provincial executive committee of the Trades and Labour Congress of Canada presented to the Ontario Government on January 14 a program of desired legislation. The members of the Government present were the Premier, the Hon. G. Howard Ferguson; Hon. Dr. Forbes Godfrey, Minister of Health and Labour; Hon. W. H. Price, Attorney-General; Hon. J. D. Monteith, Provincial Treasurer; Hon. Lincoln Goldie, Provincial Secretary, and Hon. W. F. Finlayson, Minister of Lands and Forests.

The following is a summary of the requests made on the Government:

That the Government immediately undertake all possible public works with a view to relieving the present unemployment situation and render the fullest co-operation in establishing a system of State unemployment insurance;

That a committee of the Provincial Department of Labour be appointed to investigate and advise as to desirable amendments to the Factories, Shops and Office Buildings Act;

Changes in the Fair Wages Regulations which would more adequately meet with organized labour's views respecting the same;

Enactment of legislation to allow for the establishment of superannuation funds for all paid fire-fighters in cities of 10,000 population or over;

Amendments to the Fire Department Act to provide for the three-platoon system;

Institution of regulations respecting the use of paint-spraying machines in harmony with the report of the Committee of the National Research Council which investigated the question;

Definite action to give effect to the Conventions and Recommendations of the International Labour Organization coming within provincial jurisdiction;

Repeal of those sections of the Parent's Maintenance Act which provide for the recovery of sums paid to beneficiaries under the Old Age Pensions Act from children of the same;

Raising the amount of property exemption from $2,500 to $5,000 as provided in the Mothers' Allowance Act, and establishment of a flat rate to apply to the entire province;

That legislation be enacted making the provisions of the Federal Industrial Disputes Investigation Act operative in Ontario;

Legislation making compulsory the placing of safety doors on all passenger elevators;

That witness fees be raised to conform with those paid to jurymen;

Amendments to the Mechanics' Lien Act making for priority of wage claims over other liabilities;

Legislation to provide that employers advertising for help during trade disputes make known existence of such disputes;

Establishment of the right of motion picture machine operators to court trial for offences instead of being penalized by inspectors as at present;

Amendments to the Liquor Control Act to allow for sale of beer and wine for beverage purposes in licensed places and reduction in present tax on beer;

Enactment of legislation providing for the bonding of legal firms;

Prohibition of persons under 18 years of age to operate a commercial automobile or aeroplane;

Compulsory placing of rear exits on motor buses;

Examination and licensing of auto mechanics;

That the Government institute a thorough investigation into the motor transportation industry with a view to establishing the eight-hour day and one day's rest in seven for employees engaged in the same, and that extra cost of road maintenance caused by the hauling of heavy loads be charged to the industry;

Further protective measures at railway crossings and more adequate sanitary accommodation for gatemen stationed at same;

That legislation be enacted providing for the compulsory carrying of public liability insurance by motor car owners;

Labour representation on all appointed boards or commissions;

Abolition of private employment and detective agencies;

Compulsory wrapping of bread by manufacturers;

Abolition of military training in schools;

Enactment of a barbers' licence law;

Prohibition of the manufacture of clothing in homes;

Legislation providing greater protection to linemen and other electrical workers;

Standard building and plumbing by-laws throughout the province;

Amendments to the Steam Boiler Act to bring all pressure vessels within the scope of the Act;

That a practical portable engineer be appointed to the staff charged with enforcement of the Engineers Licence Law.

The provincial executive committee which presented the program consisted of Ald H. Mitchell (chairman) Hamilton; Ald. Rod Plant, Ottawa; James Watt, Toronto, and R. H. Hessel, London. The committee was accompanied by Robt. J. Tallon and Controller Simpson, vice-presidents of the Trades Congress as well as by the following members of organized labour: Jas. F. Marsh and J. L. Gillanders, United Brotherhood of Carpenters and Joiners; J. W. Bruce and G. Milligan, United Association Plumbers and Steamfitters; E. W. A. O'Dell, Boot and Shoe Workers' Union; W. F. Bush, United Garment Workers' Union; E. Ingles, J. Noble and C. M. Shaw, International Brotherhood of Electrical Workers; Fred Molineux and J. Boyle, Brotherhood of Painters, Decorators and Paperhangers; Jas. Ward and J. Sim, International Association Operative Plasterers; W. P. Covert, International Alliance Theatrical Stage Employees and Motion Picture Machine Operators; W. Jenoves and J. Vick, International Union Bricklayers, Masons and Plasterers; Jas. Somerville and R. Riley, International Association Machinists; Frank Healey, International Union Steam and Operating Engineers; J. Gavin, Brewery, Flour, Cereal and Soft Drink Workers' International Union; J. L. Smith, Journeymen Stonecutters' Association; A. Donald Dear, D. Lamb, R. Lyons and P. Herd, International Association Fire Fighters; J. Munro, Toronto District Labour Council; Wm. Varley, Toronto Building Trades Council; J. Loan, Federated Association Letter Carriers; Jos. T. Marks, Labour Educational Association of Ontario; A. Kirzner, B. Shane and Miss M. McNab, Ladies Garment Workers' International Union.

Federation of Catholic Workers of Canada

On February 6, a delegation from the Federation of Catholic Workers of Canada, headed by Mr. Pierre Beaulé, the president, waited on the Dominion Government and presented the requests for legislation which had been adopted by the convention of the federation held in Chicoutimi in 1929 (LABOUR GAZETTE, August, 1929, page 894). The following were the members of the Cabinet who received the delegates: Hon. Ernest Lapointe, Minister of Justice; Hon. Lucien Cannon, Solicitor-General; Hon. P. J. Veniot, Postmaster General, and the Hon. Peter Heenan, Minister of Labour.

The first resolution submitted was in regard to fair wages on Federal Government contracts, and asked that such contracts should contain a minimum fair wage schedule based on the cost of living figures as published by the Department of Labour.

The delegation also asked that the Federal Government have all ships for the merchant marine service built in Canada and that the federation be heard by the Advisory Tariff Board if at any time the textile industry seeks further protection.

Unemployment insurance was urged and the hope was expressed that the province of Quebec would be induced to adopt the Federal system of old age pensions.

Other requests were (1) that Sunday be considered as a holiday for the benefit of Post Office employees; (2) the adoption of an immigration policy which would correspond with the actual power of absorption, and (3) the adoption of an eight-hour day on Federal works.

Hon. Peter Heenan informed the delegation that while the parliamentary Committee on Industrial and International Relations had reported in favour of unemployment insurance at the two last sessions of Parliament, the committee had expressed the opinion that unemployment insurance was a matter of provincial jurisdiction and suggested that it be taken up at the next Dominion-provincial conference. The Government, however, did not wait, but it was going ahead to ascertain how the provinces felt about the matter.

Hon. Ernest Lapointe agreed that unemployment insurance was a provincial matter; the hours of labour also, he pointed out, come within the jurisdiction of the provinces, and the Federal Government had power only to control hours of labour on Dominion work.

Quebec Provincial Executive of Trades and Labour Congress of Canada

A delegation representing the Quebec Provincial Executive of the Trades and Labour Congress of Canada held an interview with members of the provincial Cabinet on February 5, to make known their proposals in regard to labour legislation. The Premier, the Hon. L. A. Taschereau received the delegates, being supported by the Hon. A. Galipeault, Minister of Public Works and Labour; the Hon. J. E. Perreault, Minister of Roads; the Hon. J. L. Perron, Minister of Agriculture; Hon. A. R. McMaster, Provincial Treasurer; the Hon. Athanase David, Provincial Secretary; the Hon. Lauréat Lapierre, Minister without Portfolio, and the Hon. Hector La Ferté, Minister of Colonization, Mines and Fisheries.

The delegates were led by Messrs. Joseph Pelletier, chairman of the committee, Omer Fleury of Quebec, A. F. McLeod of Three Rivers, Phil Corriveau of Montreal, and J. T. Foster, vice-president of the Congress, and president of the Montreal Trades and Labour Council.

The proposals submitted by the delegation were as follows:—

One Day's Rest in Seven.—It was pointed out that notwithstanding the fact that legislation exists throughout the Dominion prohibiting the unnecessary practice of forcing workers in industry to work seven days a week, certain large industries still continue to ignore the principle involved. The delegation asked that such offenders should be prosecuted if they are known to be deliberately violating the law. An amendment to the existing law was also recommended whereby employees in certain industries, including theatres operating seven days each week, should have 24 consecutive hours rest each week.

Fair Wages in Public Contracts.—A complaint was made that contractors often failed to carry out agreements they had signed for the payment of current wages, and that workmen reporting such breeches of contract were sometimes dismissed, and the government was asked to compel contractors to live up to their agreements.

Employment Bureaus.—Reference was made to the "eminently useful" work carried on by the Employment Service of Canada, and the complete abolition of fee-charging employment bureaus was requested.

Bankruptcy.—It was requested that the claims of workers in bankruptcy cases be given first rank, instead of coming after loans, court cases and city taxes, it being pointed out that the workers are waiting for their wages each week to obtain the necessaries of life.

Industrial Disputes Investigation Act.—The provincial government was asked to consider the following resolution as approved by the Trades and Labour Congress of Canada:—

Whereas, by decision of the Privy Council, the Industrial Disputes Investigation Act, 1907, has been declared *ultra vires* when applied to public utilities and corporations holding incorporation and operating within provincial boundaries; and whereas, in the interest of industrial harmony it is desirable that the said legislation should be permitted to function universally throughout the Dominion without hindrance; and whereas, pending suggested amendment to the British North America Act that would permit of such a course, enabling legislation is being sought from the Provincial Government that will allow of such action; and whereas, up to date, all provinces, with the exception of Ontario and Quebec, have agreed and enacted such enabling legislation. Therefore, be it resolved, that the incoming Executive Committee of both these provinces be instructed to press upon their legislators for the enactment of the necessary legislation.

Unemployment Insurance.—The Government was asked to take definite action to further the enactment of legislation providing for insurance against unemployment, in accordance with the recommendations of the committee on Industrial and International Relations of the Dominion Parliament. (LABOUR GAZETTE, June, 1929, page 603.)

Mothers' Allowances.—It was recommended that Quebec should follow the example of other provinces by enacting legislation to provide for mothers' allowances and maternity benefits, such legislation having been proved to be of material benefit in enabling mothers to care for their children without recourse to charity.

Minimum Wages.—An extension of the powers of the Women's Minimum Wage Commission was sought, whereby orders could be made regulating the wages paid to employees in commercial as well as in industrial establishments. It was also proposed that the Commission be given authority to define hours of work as well as wages.

I.L.O. Conventions.—Legislation was desired to give effect to the Draft Conventions of the International Labour Conference in regard to (1) the 8-hour day; (2) Protection of women and children in industry and commerce. It was also suggested that Quebec should co-operate with the other provinces in securing ratifications, and that the province should be directly represented at future conferences.

Old Age Pensions.—The government was urged to further the passing of enabling legislation whereby the province might secure benefits from the Dominion Old Age Pensions Act, instead of being a contributor, as at present, to a system from which it derived no benefit.

Workmen's Compensation.—Amendments to the Act were recommended providing (1) for the elimination of certain provisions which lead to delay in the settlement of claims; and (2) for the institution of a system based on the collective liability of employers.

Health and Safety.—A series of measures were proposed in this group, dealing respectively with (1) the protection of workers em-

ployed in the operation of paint spraying machines; (2) the provision of safety doors on all passenger elevators; (3) rules for governing hoisting apparatus for the building industry; (4) protection of workmen against the use of unsafe scaffolding in building operations; (5) appointment of a moulder as foundry inspector; and (6) appointment of additional inspectors in order to prevent the employment of unqualified stationary engineers.

Alberta Federation of Labour

On January 28 a delegation from the Alberta Federation of Labour, headed by the president, Fred J. White, M.L.A., met Premier Brownlee and members of his Cabinet and presented the legislative demands of the federation. The first matter presented was the question of unemployment, suggestions being made in accordance with the resolutions at the annual convention (page 171).

Workmen's Compensation.—Amendments to the Act were recommended as follows:—

That compensation payments be based on actual earnings at the time of accident; abolition of the 3-day waiting period; increase in rate of compensation to 75 per cent of earnings; increase of rate to widows to $50 per month, and to dependent children $20 for the first child and $15 for each additional child; increase of minimum compensation payment to $15 per week; inclusion in benefits of all diseases traceable to employment, including rheumatism, neuritis, lung ailments and smoke poison, kidney affections, etc.; compensation to workers considered fit for light work until such work can be provided; that the amendment of 1928 (subject to proclamation) bringing restaurants and retail shops under the Act, be made effective; and that at least two employees on each platoon in fire departments be trained in the use of oxygen helmets.

Mines Act.—Amendments in the draft of the new Mines Act were asked for to provide for the election of district inspectors by vote of the miners, instead of by the government; that there should be one permanent board for the province; that the age limit for employing boys underground be raised from 16 to 18 years and that for boys on surface be 15, corresponding with the school-leaving age; that wages be paid weekly.

Mothers' Allowances.—Proclamation was requested of the amendment of 1926 making the Act apply to the wife of a husband who is unable to support his family owing to a disability which may be expected to continue for a year; it was denied that the Act be made reciprocal in its provisions with reference to persons moving from one province to another; that the Act apply to deserted wives; that payments continue until children reach the age of 18 years.

Among other proposals submitted were the following:

That the Mechanics' Lien Act and similar legislation be made as effective as possible so as to provide security of wages;

Extension of Minimum Wage Act;

A maximum work day of eight hours and not more than five days per week;

A six-hour day in the building industry during the months of December, January and February;

Health insurance;

Recommending that (*a*) old age pensions be paid at 65 years of age, (*b*) that the condition of 20 years residence in Canada be cumulative; (*c*) exclusion from the computation of income old age pension of $40 per month or under;

Against the granting of a monopoly of surface rights to coal owners or other employers of labour;

Conservation and economic development of the resources under public ownership and control, and uniform fair wage agreements to apply to all work performed by wage-earners in the development of the resources;

Amendments to the Theatres' Act to provide (*a*) that only projectionists holding first-class Alberta certificates be permitted to operate the motion picture projectors in private screening rooms and the Alberta Censor's Theatre, (*b*) that first and second class licences be issued for $20, renewable annually for a fee of $2, (*c*) that the Government recognize the prevailing rate of wages and working conditions for those employed in the censor's theatre;

Amendment of the Boilers Act;

That entry into the provincial schools for higher education be based on the requisite percentages of qualification marks by examination, and that the cost of pupils then attending such schools be borne by the province as a whole;

Regulations to govern the operation of spray painting machines;

That barbers and electrical workers be included in a proposed Trades Bill having for its purpose the licensing of workers in certain trades;

Increase of the minimum payment under the Civil Service Superannuation Act.

New Brunswick Federation of Labour

Subsequent to the convention of the New Brunswick Federation of Labour (page 172), the following legislative program was presented to the provincial government by members of the Federation:

Enactment of a provincial Old Age Pension Act;

Establishment of mothers allowances and minimum wages for women and young persons;

Elimination of level crossings and dangerous curves in permanent road construction;

Amendments to the Workmen's Compensation Act;

That Commissioners of the Workmen's Compensation Board be granted an increase in salary;

Amendments to the Factories Act;

That all engineers operating steam boilers be required to hold a licence;

Examination and licensing of moving picture machine operators;

Elimination of the amusement tax from all tickets of the value of fifty cents and under;

Inspection of all electrical work and the examination and licensing of workmen in this trade;

That it be compulsory to hold an inquest into every fatal industrial accident;

Appointment of a Deputy Minister of Labour;

Reduction of home studies for children to a minimum;

Appointment of a qualified boiler inspector;

Instruction in first aid and safety first to government employees on road and such work;

That all government printing be done within the province and bear the union label;

Development of the natural resources of the province under public ownership and control;

Labour representation on public boards and commissions;

Amendment to the Provincial Election Act so as to provide for advance polls in provincial elections for railway employees and others whose employment requires their absence from home on polling day;

Cancellation of all private fishing leases on expiry;

Enactment of legislation providing for a maximum of nine hours per day in the lumber industry;

Appointment of a journeyman plumber on the Plumbers Examining Board;

Appointment of a scaffolding inspector.

Railway Brotherhoods' Requests in New Brunswick

The Joint Legislative Committee of the Railway Brotherhoods, accompanied by the Executive Officers of the New Brunswick Federation of Labour, met the Government in January in the Council room at Saint John, New Brunswick, and presented a memorandum of proposed legislation. Members of the Government present were: Hon. J. B. M. Baxter, Premier and Attorney-General; Hon. C. D. Richards, Minister of Lands and Mines; Hon. A. J. Leger, Provincial Secretary; Hon. D. A. Stewart, Minister of Public Works; Hon. Lewis Smith, Minister of Agriculture; Hon. H. I. Taylor, M.D., Minister of Health and Labour; Hon. L. P. D. Tilley, president of the Executive Council, and Hon. E. A. Reilly, chairman of the Electric Power Commission.

Representatives of the Joint Legislative Committee of the Railway Brotherhoods were: Messrs. J. F. Caine, vice-chairman, Canadian Legislative Board, Brotherhood of Locomotive Firemen and Enginemen; S. H. Shaw, chairman of the Brotherhood of Railroad Trainmen Legislative Board; T. J. Coughlin, Dominion legislative representative, Brotherhood of Railroad Trainmen, and Wm. L. Best, vice-president and National legislative representative, Brotherhood of Locomotive Firemen and Enginemen.

The New Brunswick Federation of Labour Executive was headed by Messrs. D. R. Steeves, president; George R. Melvin, secretary-treasurer; J. S. MacKinnon, legislative representative, and R. H. Carlin, Saint John; also Pat Green of Ottawa, general organizer.

Where similar items appear on the memoranda of the Brotherhoods and the Federation, the joint delegation arranged that these would not be duplicated in their presentation. For example, in Workmen's Compensation, Protection at Highway Crossings, Advance Polls for Railway Employees, Old Age Pensions and Labour Representation on Public Boards and Commissions, were read from the memorandum of the Railway Brotherhoods.

The memorandum included the following recommendations:—

Workmen's Compensation.—It was suggested that "accident" be defined in the Act as including "wilful and intentional act, not being the act of the workman, and a fortuitous event occasioned by a physical or natural cause"; also that medical aid and rehabilitation be included in compensation.

99633—6½

It was further suggested that the maximum of average earnings considered for compensation purposes should be $2,000 instead of $1,500; and that accidents to workmen should (unless the contrary can be shown) be presumed to have occurred in the course of, and arising out of employment.

Another proposed amendment would compel employers, in reporting their payroll to the Board, to include workmen engaged by them outside the province. Accidents to workmen resident of the province occurring on a steamboat outside the province should be compensated as though happening in the province.

As to the scale of compensation it was proposed to base the limit of the earnings on which percentage of benefits are calculated on a yearly rather than a monthly basis. In cases of permanent disability, payments should be continued for life or the duration of disability. It was further proposed that the percentage of earnings payable in compensations be raised from 55 per cent to 66⅔ per cent.

The Board, it was suggested, should have power to expend up to $25,000 per year for rehabilitating injured workmen, lessening the handicap caused by their injuries. Injured workmen should be entitled to artificial limbs and other apparatus, to be kept in repair for at least a year.

Advance polls for railway men in Provincial elections.

Enactment of concurrent legislation in New Brunswick to make the Federal Old Age Pensions Act effective within the province.

Enactment of a Mothers' Allowance Act during 1930.

Representation of labour on public boards and commissions.

Elimination or protection of level highway crossings over railways.

A uniform educational system for the three maritime provinces.

Railway Brotherhoods' Requests in Quebec

A memorandum was submitted to the Hon. L. A. Taschereau, Prime Minister and Attorney-General, and Hon. A. Galipeault, Minister of Public Works and Labour, on November 29, 1929, by the Joint Legislative Committee of the Railway Brotherhoods, of which C. Masse is chairman and J. L. Labreche is secretary. Mr. Masse, vice-chairman for Quebec for the Canadian Legislative Board, Brotherhood of Locomotive Firemen and Enginemen, and Mr. Labreche is chairman of the sub-legislative board of the Brotherhood of Railroad Trainmen for Quebec. The Joint Committee were accompanied by Mr. T. J. Coughlin, Dominion legislative representative, B. of R. T., and Mr. Wm. L. Best, vice-president and national legislative representative, B. of L. F. & E.

The memorandum included the following recommendations:—

Elimination or better protection of level railway crossings.

Enactment of a Mothers' Allowance Act by the province.

Enactment of an Old Age Pensions Act by the province.

Free school books.

The delegation commended the government for its decision to appoint a commission to study a system of social insurance (LABOUR GAZETTE, January, 1929, page 3), and asked that labour should be represented in this commission.

Workmen's Compensation.—It was suggested that the provisions respecting indemnities be amended to provide that in the case of temporary or permanent incapacity, whether total or partial, compensation shall be paid during such incapacity and the present maxima of $5,000 and $10,000 be eliminated from the Act.

The waiting period should, it was proposed, be reduced from seven to three days.

The maximum basis used in computing percentages of wages should be $2,000 instead of $1,560, and the $6,000 maximum of compensation payments should be struck out.

The Commission should have power to render decisions on the real merits of particular cases and not be bound by legal or other precedents. The memorandum concluded with the following note:—

"The present Compensation Act, in effect for a little more than a year, has already given the railwaymen of the province a deplorable experience, particularly as regards cases of permanent partial incapacity. The loss of one eye or of a limb to a railway man means the loss of his position and must be regarded as a greater impairment than to a workman in some other class of employment where he might resume his former occupation. In order to give railwaymen in engine and train service, and those whose occupational risks are similar, a fair and equitable compensation, the decisions of the Workmen's Compensation Commission should be rendered on the merits of the case instead of the strict application of a schedule of percentage of incapacity, which does not take into account the exact degree of incapacity in relation to the injured workmen's ability to readjust himself into the same or other suitable employment."

Railway Brotherhoods' Requests in Ontario

A memorandum of proposed legislation was submitted to the Ontario Government on January 27, on behalh of the Joint Legislative Committee of the Railway Brotherhoods. Members of the Government present: Hon. G. Howard Ferguson, Premier and Minister of Education; Hon. W. H. Price, Attorney-General, and Hon. F. E. Godfrey, Minister of Labour and Health. The delegation representing the Joint Legislative Committee were Messrs. James Conley, chairman of the Ontario Legislative Board, Brotherhod of Railroad Trainmen, chairman of the Joint Committee; A. H. Nethery, chairman of the Ontario Legislative Board, order of Railway Conductors, secretary of committee; J. S. Crawford, chairman of the Ontario Legislative Board, Brotherhood of Locomotive Engineers and H. B. Crawford, Ontario Vice-Chairman, Canadian Legislative Board, Brotherhood of Locomotive Firemen and Enginemen. These were accompanied by Messrs. A. J. Kelly, vice-chairman, Brotherhood of Railroad Trainmen, Legislative Board; T. J. Coughlin, Dominion legislative representative, Brotherhood of Railroad Trainmen and Wm. L. Best, vice-president, national legislative representative, Brotherhood of Locomotive Firemen and Enginemen.

The memorandum included the following recommendations:—

Legislation by the province bringing all industries, otherwise within provincial jurisdiction, under the Industrial Disputes Investigation Act.

That the Legislature take action by resolution, towards securing amendment of the British North America Act so that the veto powers of the Senate may be restricted.

Protection at highway crossings.

Uniform traffic regulations for all Canada, and compulsory insurance for motor car owners.

Amendments to the Mothers' Allowance Act, including the payment of allowances where there is only one child in the family.

Workmen's Compensation.—It was proposed that industries now in Schedule 2 of the Act be placed in Schedule 1, and contribute to the accident fund; that when an injured workman has been awarded total disability compensation the same should be continued until he is able to resume his former occupation or has been offered other suitable and equally remunerative employment; and that if such injured workman has suffered a permanent partial disability, but upon the report of the attending physician is able to take light work, the total disability payments should be continued until suitable employment is provided.

That the basis of the maximum computation of wages be increased from $2,000 to not less than $2,500, to be more consistent with increases in wages and the cost of living during the period the Act has been in force.

That the rate of compensation be increased from 66⅔ to 75 per cent of the average earnings, and that figures be changed accordingly wherever appearing in the Act.

The memorandum proposed that a broader application be made of the Act in general, more in keeping with the original intention of the Legislature.

Amalgamated Clothing Workers' Model Housing in New York

Two years ago the Amalgamated Clothing Workers of America organized the Amalgamated Dwellings Corporation to provide workers with apartments on a co-operative basis (LABOUR GAZETTE, February, 1928, page 145). The original enterprise, which was carried out in the Bronx district, proved so successful that the New York State Housing Board recently invited the union to undertake a new model housing project on the site of the old R. L. Hoe Printing Press Company's building on the lower east side. The new buildings will be run co-operatively, and will cost $2,500,000. The *New York Times* (January 7, 1930) describes the new undertaking as follows:—

The union corporation which will erect and manage the buildings is the Amalgamated Dwellings Corporation. This company will supervise the sale of the apartments on the co-operative plan. Apartments will sell for $500 a room, but applicants will be assisted to the extent of $350 a room by a credit company organized for that purpose. Thus a four-room apartment will cost $2,000, of which the purchaser will put up $600 in cash. He will then have ten years to pay off the balance, after which he will own the apartment and pay only the running expenses. The method of financing sale of the apartments is similar to the plan adopted by the Amalgamated Clothing Workers in its other housing projects.

"Our experience in the Bronx, where we erected six buildings for 300 families, was so successful that we bought more land to extend the co-operative venture," said Sydney Hillman, president of the union. "When we were approached to take over the handling of the new venture on the lower east side we were glad to do so as it was felt that our experience had been sufficient to guarantee proper handling of the enterprise."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Conditions of Employment in Coal Mines

A CONFERENCE of representatives of Governments, mine-owners and miners of the nine chief coal producing countries of Europe was held in Geneva during the month of January for the purpose of advising the Governing Body of the International Labour Office as to questions relating to conditions of employment in coal mines which might be included in the agenda of the International Labour Conference of 1930, with a view to arriving at practical international agreement. The recommendations of the conference may be summarized as follows:

Hours of Work.—The Conference suggests that the Governing Body should place on the agenda of the 1930 Conference the discussion of a Convention on hours of work in coal mines, as it considers that on this question an international agreement may be sought. Further, the Conference reached agreement on a number of practical questions relating to the calculation of time spent in the mine, with a view to the establishment of international uniformity, though it was unable to agree on a definite figure for the maximum working day or week and left this issue open for decision by the International Labour Conference.

Wages.—The Conference, considering that difficulties are involved in the immediate adoption of a Convention or Recommendation on this subject, suggests that the Office should continue its study of the question with a view to preparing a report for the 1930 or 1931 Conference.

General Conditions: The Conference recommends:—

That the question of holidays with pay, the natural complement to the question of hours of work, should be placed on the agenda of one of the next Sessions of the International Labour Conference;

That the Office should continue its study of the working of systems of family allowances;

That the question of the prohibition of the employment of women underground in coal mines should be placed on the agenda of a future Conference with a view to the adoption of a Convention;

That the question of the minimum age for admission to underground work in coal mines should be placed on the agenda of an early Session of the Conference with a view to arriving at a Convention on the subject;

That coal-producing States which have not yet ratified or applied the Conventions and Recommendations of 1925 and 1927, relating to compensation for accidents and sickness insurance, should be urged to do so;

That the question of invalidity, old age and survivors' insurance should be placed on the agenda of one of the earliest Sessions of the Conference;

That the question of the the maintenance of the right to a pension for workers proceeding from one country to another should be placed on the agenda of the earliest possible Session of the Conference;

That, in view of the persistent extensive unemployment among miners, the Economic and Finance Organization of the League of Nations should continue its efforts to promote an international agreement on coal production, and the International Labour Organization should continue its efforts for the universal adoption of unemployment insurance and employment exchange systems;

That the Office should complete and coordinate its information on health and sanitation, and prepare a manual which would facilitate the adoption of international standard regulations for the health of mine workers; and

That the Office should pursue the comparative study of accident prevention in mines, experts in the matter being added to the Safety Sub-Committee established by the Office.

German Action on Conventions of 12th Conference

Action is being taken by Germany for the ratification of the Draft Convention concerning the marking of the weight on heavy packages transported by vessels, and the Draft Convention concerning the protection against accident of workers employed in loading or unloading vessels, adopted by the International Labour Conference at its Twelfth Session (1929). The Government also proposes to continue the negotiations which have been begun with various countries, including Austria, Czechoslovakia, Switzerland, France and Poland, with a view to the establishment of direct relations between the social insurance institutions in Germany and in those countries respectively.

Publications of the International Labour Office

The International Labour Office has just published the third and last series of its study of Migration Laws and Treaties. The first two volumes of this work were devoted to a study of national laws and regulations governing migration in the countries of emigration

and of immigration respectively. National legislation alone, however, cannot cover all the aspects of migration, which, by its very nature, inevitably affects more than one country. Many of the problems arising from migration can only be dealt with by international agreement. The volume just issued is devoted, therefore, to a survey of the international treaties and conventions concerning emigration.

A further series of brochures of the encyclopaedia of hygiene, pathology and social welfare which is being published by the International Labour Office under the title "Occupation and Health," have just appeared covering articles on: Chemical Trades; Food of the Industrial Worker; Sulphuric Acid; Compressed Air Work; Fur Trade; and Manufacture of Horn Articles.

UNEMPLOYMENT IN CANADA IN 1929 AS REPORTED BY TRADE UNIONS

MONTHLY reports tabulated by the Department of Labour from local trade unions showing their membership and the number of members unemployed indicate the labour trend for organized workers throughout the country. The average number of unions reporting monthly during 1929 was 1,713, with an average membership of 200,257 persons.

Nominal improvement in conditions affecting trade union members was shown during January from the December, 1928, situation, though the usual winter seasonal curtailment of activity was evident to some degree. During February, however, slight reductions in activity were noted. The trend of employment in these two months was somewhat better than in the corresponding months of 1928, the manufacturing industries, particularly the garment trades and the building and construction trades, showing a slightly higher employment level and the transportation industries some declines in activity during both months. From the close of February steady improvement was shown month by month until the end of June, when employment reached its height for the year, 2.9 per cent of the members being unoccupied. This improvement was due largely to continued advances, chiefly seasonal in character, among building and construction workers, though employment in the transportation industries also showed some increase. Expansion was indicated in the manufacturing industries during March, but in April, due to inactivity in the garment trades the situation in these industries as a whole was less favourable. In May and June, however, the employment trend for these workers was upward. The July situation remained much the same as in the previous month, the tendency, however, being toward lessened employment. In August, a moderate drop in the volume of work was indicated, and from then onward a continued slowing up of activity was apparent each month until the close of the year, when 11.4 per cent of idleness was recorded, the largest percentage to be shown during the year.

Rather unusual factors entered into the situation toward the latter part of the year, namely, the short wheat yield in the western provinces, and the hold up in the grain movement, reducing employment for railway workers to a considerable extent, together with unusual quietness in the garment trades, especially in the Province of Quebec. These circumstances, combined with the customary curtailment of activity in the building and construction trades with the approach of winter, were large factors in the depression, the first two causes indicated being exceptional. In addition, the December situation was somewhat influenced by the fact that a number of establishments at the end of the year closed their plants in order to afford a vacation for their employees or for stocktaking and inventory purposes. That the unemployment volume in the latter part of the year was somewhat greater than in the corresponding period of the previous year was due to the presence of the two exceptional factors above mentioned, namely, the unusual conditions existing for both railway and garment workers.

The United States Commissioner of Labour Statistics is authority for the estimate that the annual labour turnover of probably 40 per cent for workers in all lines taken together involves 5,200,000 persons each year. He points out that the two weeks estimated as the average time elapsing between jobs is the equivalent of full time employment for 200,000 people. The cost of retraining, in addition to the cost of spoiled material, is estimated at approximately $52,000,000 a year and the loss in wages at well over $300,000,000.

During the month of January a total of 5,475 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 36 of which were fatal cases; in Schedule 2 industries 427 were reported including 3 fatal cases; and 393 Crown, 4 of which were fatal, were reported during the month, making in all 6,295, of which 43 were fatal.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER AND DECEMBER, 1929

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter October to December, 1929, were somewhat less favourable than during the corresponding period of 1928, as there was shown a decrease of 18 per cent in the number of positions offered, and a decrease of over 16 per cent in the placements effected in regular and casual employment. An analysis of the

different industries showed that gains were registered both in vacancies and placements in logging, construction and maintenance, and finance while all other groups showed declines in both instances. Nova Scotia and Ontario were the only groups to record gains both in vacancies and placements, while Manitoba showed an increase in placements only. The remaining provinces reported declines under both comparisons. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various offices during the period October to December, 1929.

From the chart on page 206, which accompanies the article on the work of the Employ-

ment Service for the month of December it will be noted that the trend of the curves representing the ratios of vacancies and placements in relation to applications was downward during October and November, the curve of vacancies during the first half of December showing a slightly upward tendency, while that of placements continued to show a decline. Both curves, however, during the latter half of December registered a sharp upward trend although they did not attain the levels reached at the close of December, 1928. During the period October to December, 1929, there was a ratio of 68·2 vacancies and 65·6 placements for each 100 applications for employment as compared with 79·6 vacancies and 74·9 placements during the corresponding period of 1928. The average number of positions offered daily during the quarter under review was 1,213, of applicants registered 1,780, and of placements effected 1,167, in contrast with a daily average of 1,485 vacancies, 1,866 applications and 1,398 placements in regular and casual employment during the last quarter of 1928.

During the three months October to December, 1929, the offices reported that they had made 93,748 references to positions and had effected a total of 89,853 placements, of which 54,210 were in regular employment and 35,643 in casual work. Of the placements in regular employment 43,093 were of men and 11,117 of women, while casual work was found for 21,885 men and 13,758 women. Comparison with the same period in 1928 showed that 107,587 placements were then made, of which 72,530 were in regular employment and 35,057 in casual work. Applications for employment during the period under review were received from 99,736 men and 37,322 women, a total of 137,058, in contrast with a registration of 143,653 persons during the same period of 1928. Employers notified the Service during October to December, 1929, of 93,449 vacancies, of which 65,620 were for men and 27,829 for women, as compared with 114,290 opportunities for work during the corresponding period of 1928.

A report in detail of the transactions of the Employment Service for the month of December, 1929, will be found on page 206.

Industrial Arbitration in Australia

During the period of 30 years or more in which compulsory arbitration in one form or another has been in operation in Australia continual attempts have been made to adjust the various sytems to the needs of the different States and of the Commonwealth as a whole. At present activity in this direction is particularly marked.

A Bill placed before the Legislative Assembly of Queensland by the Minister for Industry provides for the abolition of the present Board of Trade and Arbitration Court and the establishment in their place of a court to be called the Industrial Court. This court would have exclusive jurisdiction in declaring the basic wage and standard hours. The court must take into consideration the economic aspect of the awards which it makes, and in order to assist the court in this respect a new department, known as the Bureau of Economics and Statistics, is projected. In addition to the Industrial Court, the Bill provides for two Conciliation Commissioners for the State, and conciliation boards are to be constituted by the court for the various occupations to which the Act applies. The court is to appoint a Conciliation Commissioner to be chairman of all boards so constituted, and the Minister for Industry will appoint other members, to hold office for a period not exceeding three years. Each board will consist of a chairman and two or four other members as recommended by the court, one half representing employers and the other half employees. No dispute may be referred to the court until it has first been referred to the conciliation board.

In Western Australia the Minister for Labour has introduced a Bill containing a number of amendments to the Industrial Arbitration Act. A recent interpretation of the Industrial Arbitration Act, he said, had made legislation necessary, it having been found that, according to the Act, once an agreement was made and declared the common rule it could never be altered or amended. An amendment proposed in the Bill now under consideration lays down that when an agreement is made the common rule it becomes an award, the position then being the same as if the court had declared an award.

In addition to the modifications under consideration in Queensland and Western Australia, the Governor's speech in New South Wales foreshadowed amendments of the present State industrial arbitration system. Considerable alterations are also anticipated in the existing Commonwealth Conciliation and Arbitration Act. With regard to this latter question, a meeting of the Executive of the Australian Council of Trade Unions, held on November 20, resolved that the next All-Australian Trade Union Congress should be held on March 31, 1930, to consider the proposed amendments to the Act. The Conference decided to invite all industrial organizations to submit proposals, through the Trades and Labour Councils of the States, for the alteration of the Commonwealth industrial legislation.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1929

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on January 1, was 7,063, their employees numbering 967,540 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,790, having an aggregate membership of 213,065 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of January, 1930, as Reported by Employers

As is customary at the beginning of the year, employment on January 1, 1930, showed a pronounced curtailment which involved practically the same proportion of the aggregate staffs as that indicated on January 1, 1929 and 1928. Activity in recent months has been at an exceptionally high level, so that many employers took the opportunity of closing their entire plants during the holiday season for necessary repairs and inventories, as well as to provide a vacation for their staffs. However, the situation continued better than on the corresponding date in any other year since the record was instituted in 1920. The Dominion Bureau of Statistics tabulated returns from 7,063 firms, whose payrolls declined from 1,037,259 persons on December 1 to 967,540 at the beginning of January, a decrease of approximately 70,000 persons, or 6·7 per cent. Reflecting this contraction, the index (based upon the 1926 average employment as 100) stood at 111·2 on January 1, 1930, as compared with 119·1 in the preceding month, and with 109·1, 100·7, 95·9, 90·7, 84·9, 89·8, 87·3, 78·8 and 88·8 on the same date in 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Manufacturing, construction, transportation, mining, logging and trade reported large seasonal contractions as compared with December, while communications registered improvement.

Employment by Economic Areas

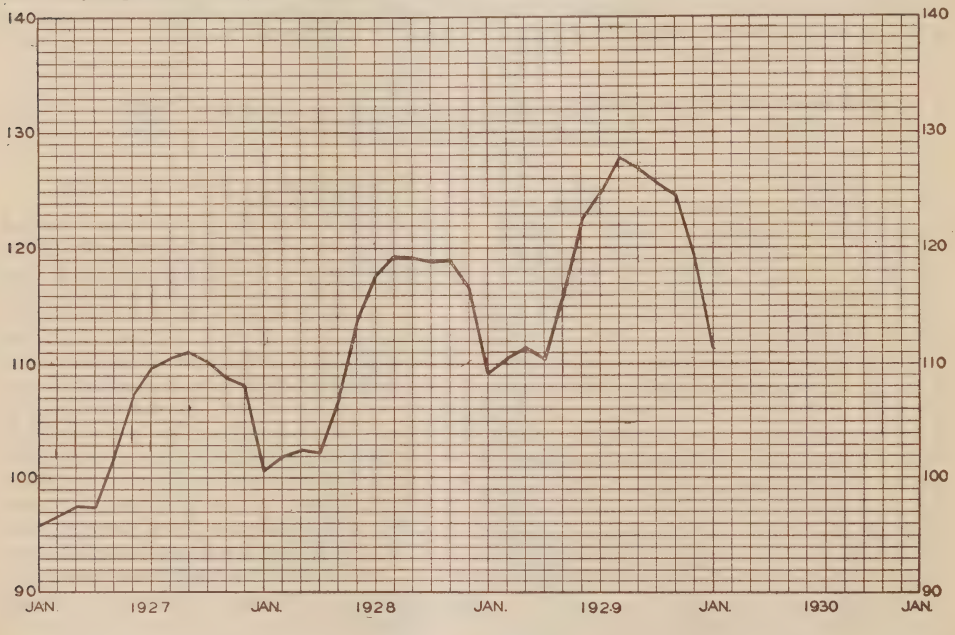
All except the Maritime Provinces recorded declines, those in Quebec and Ontario, where manufacturers are especially important in the industrial distribution, being most extensive.

Maritime Provinces.—In contrast with the losses usually recorded at the beginning of the year, there was an increase in employment in the Maritime Provinces; this occurred chiefly in transportation, and was due to the opening of the winter ports. On the other hand, manufacturing and construction showed seasonal curtailment. Statements were received from 535 firms employing 76,564 persons, compared with 76,317 at the beginning of December. Large reductions had been noted on January 1, 1929, when the index was over ten points lower.

Quebec.—The decrease in Quebec was greater than on the same date in 1929, but the situation continued more favourable than on January 1 of any other year since this series was instituted in 1920. Manufacturing (notably of textile, food, lumber, pulp and paper and iron and steel products), construction and transportation reported especially pronounced losses, but the tendency was also downward in logging, mining and trade, while improvement was noted in communications and services. In many cases, operations will have been resumed early in the New Year. The labour forces of the 1,648 co-operating

employers aggregated 271,199 workers, as against 299,183 on December 1, 1929.

Ontario.—Manufacturing, construction and transportation showed the greatest curtailment in Ontario. Within the manufacturing division, textiles, food, iron and steel and lumber reported the most extensive shrinkage. Logging and communications, however, recorded advances and retail trade, though not at the pre-Christmas peak, was nevertheless considerably busier than at the beginning of December. A combined payroll of 411,834 persons was employed by the 3,178 firms whose returns were received, and who had 436,907 on their staffs on December 1. These contractions involved the same proportion of the reported employees as on January 1, 1929, but the index continued higher than on the same date in all other years of the record.



Prairie Provinces.—Declines involving practically the same percentage of the payrolls as at the beginning of January, 1929, were noted in the Prairie Provinces, where employment was not so active as at the commencement of last year, largely as a result of the small crop and the grain tie-up. Statistics were tabulated from 985 employers of 130,953 workers, or 9,787 less than on December 1. Construction reported especially noteworthy losses, but transportation, manufacturing, mining and trade were also slacker. On the other hand, telephone communications and logging registered improvement.

British Columbia.—The recessions in British Columbia were more extensive than on January 1 of last year, resulting in a rather lower index than at the beginning of 1929, but the situation was better than on the same date in any of the eight preceding years. The 716 firms furnishing data reported 76,990 employees, as against 84,112 in the preceding month. Lumber mills, logging and construction recorded important curtailment, while there were smaller losses in food and other factories, and in mining, transportation and trade.

Index numbers of employment by economic areas are given in Table I.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Employment by Cities

There were contractions in each of the eight cities for which separate tabulations are made, firms in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and the Adjacent Border Cities, Winnipeg and Vancouver reporting reduced employment.

Montreal.—The decrease in Montreal involved a larger number of workers than that registered on January 1, 1929, but the index on the date under review was higher than at the beginning of last year and of every other year for which statistics are available. Statements were received from 879 establishments with 131,344 employees, as compared with 143,510 in the preceding month. Important declines were shown in construction and transportation, and also in manufacturing, especially in food, textile and iron and steel factories. On the other hand, additions to staffs were noted in the service group, particularly in hotels and restaurants.

Quebec.—Manufactures, construction and shipping reported a loss in employment in Quebec City, where 123 employers reduced their staffs from 12,842 persons on December 1 to 12,530 at the beginning of January. This decrease was less than that indicated on January 1, last year, and the index continued considerably higher than on the same date in earlier years of the record.

Toronto.—Toronto firms reported a larger seasonal contraction than on January 1, 1929, but employment continued in rather greater volume than at the beginning of any other year of the record. There were declines in manufacturing, the most noteworthy being in

NOTE.—The "relative weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

textiles and foods; construction, transportation and services were also seasonally slacker, but trade and communications showed considerable improvement. Returns were tabulated from 962 employers with 123,672 workers, compared with 129,315 in their last report.

Ottawa.—Manufactures and construction registered seasonal curtailment, while transportation afforded greater employment. The working forces of the 146 reporting establishments aggregated 13,093 persons, or 386 fewer than at the beginning of December. This reduction involved a smaller number of employees than that recorded on the same date last year, when employment was in less volume.

Hamilton.—Data were received from 214 firms in Hamilton employing 36,839 workers, as against 38,262 on December 1. Manufactures, construction and shipping showed reduced activity, while only small changes were indicated in other groups. The declines noted on January 1, 1929, were not so extensive, but the index was then many points lower.

Windsor and Adjacent Border Cities.—There was a rather larger contraction in the Border Cities than on January 1, 1929, when employment was in greater volume. Manufactures and construction were seasonally quiet. Returns were compiled from 132 establishments with 14,545 persons in their employ, or 822 less than on December 1.

NOTE.—The "relative weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Winnipeg.—Manufacturing and construction registered the most extensive declines in Winnipeg, but trade was also slacker, while communications showed improvement. The 336 co-operating firms reported 32,845 employees, compared with 34,065 in the preceding month. This reduction did not involve so many workers as were released on January 1, 1929, when employment was in practically the same volume.

Vancouver.—Further reductions took place in Vancouver, according to returns from 276 employers of 27,956 persons, as compared with 29,376 on December 1. Practically no change had been indicated on the same rate last year, but the index then was a few points lower. There were pronounced losses in manufacturing, construction and trade on January 1, 1930, as compared with the preceding month.

Index numbers by cities are given in Table II.

Manufacturing Industries

The losses in employment registered in manufactures were larger than on January 1, 1929 and 1928, but smaller than in most other years on record. The index, though slightly lower than at the beginning of 1929. was considerably higher than on January 1 in any other year since 1920. The most extensive reductions were in the food, lumber, iron and steel, textile, pulp and paper, building ma-

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

terial, leather and rubber industries, but plants in practically all divisions recorded curtailment. A notable exception was the automobile group, in which the seasonal gains were on a larger scale than on January 1, 1929. As in previous years, the declines so generally reported, were chiefly due to shutdowns for holidays, inventories and repairs, and considerable improvement may be expected in the next report. Statistics for January 1 were compiled from 4,214 manufacturers, employing 510,623 operatives, compared with 541,396 on December 1.

Animal Products—Edible.—Large reductions were reported in this division, in which all branches showed curtailment, that in meat-

[1] The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

preserving plants being most extensive. Statements were received from 190 manufacturers with 16,950 workers, as compared with 18,140 at the beginning of December. This loss was larger than that recorded on January 1, 1929, when the index number was some points higher. All except the Maritime Provinces reported reduced employment, but the heaviest contractions were in Ontario and British Columbia.

Leather Products.—There was a decline in employment in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage did not involve so many employees as that noted on the corresponding date last year, when the index was lower. A combined working force of 15,527 persons were registered by the 174 firms making returns, as compared with 16,620 in the preceding month. The tendency was generally downward, but the greatest losses occurred in Ontario.

Lumber Products.—Seasonal contractions on a much smaller scale than on January 1, 1929, were noted in lumber mills, 690 of which reduced their payrolls from 47,728 on December 1 to 42,386 workers at the beginning of January. Employment was in practically the same volume as on the corresponding date last year. Saw-mills registered the most pronounced decreases, but there was also curtailment in furniture, match, container and other wood-using industries. There were especially marked losses in Ontario, although employment declined generally except in the Maritime Provinces, where an increase was indicated.

Musical Instruments.—Forty manufacturers of musical instruments released 532 persons from their staffs, bringing them to 2,490 at the beginning of January. Practically all the decline took place in Quebec and Ontario. A smaller recession had been noted on January 1 a year ago, and the index number was then considerably higher.

Plant Products—Edible.—There was seasonal reductions in employment in all branches of the vegetable food group, the greatest being in sugar and syrup, canning, biscuit, chocolate and confectionery factories. The working forces of the 365 co-operating employers totalled 28,204 persons as compared with 32,745 in their last report. The contractions in Ontario were especially pronounced, but the movement was generally unfavourable. The declines noted at the beginning of January last year were not so extensive, though the index number was slightly lower than on the date under review.

Pulp and Paper Products.—The shrinkage at the beginning of January, 1930, was not so extensive as in 1929, when employment was in smaller volume. Statistics were received from 539 firms, whose staffs aggregated 66,218 workers, or 1,792 less than in their last report. The most noteworthy losses were in Quebec, although the trend was downward in all except the Maritime Provinces. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing establishments.

Rubber Products.—Rubber factories showed a decrease, which was larger that that of January 1, 1929; 38 rubber factories had 16,284 employees on the date under review, as against 17,177 at the beginning of December. Ontario and Quebec reported losses, those in the former being especially pronounced. The index number, at 128·0, was lower than on the same month last year.

Textile Products.—The 651 firms furnishing data released a rather greater proportion of their total operatives than did the establishments reporting at the beginning of January, 1929, when the index number was higher than on the date under review. Their payrolls included 77,937 persons on January 1, against 83,829 in the last report. Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knitting, thread, yarn and cloth and garment divisions.

Tobacco, Distilled and Malt Liquors.—The falling-off in employment at the beginning of January involved a much smaller number of employees than on January 1 last year, when employment was in considerably smaller volume. Statements were tabulated from 147 manufacturers in this group, employing 16,060 workers, or 572 less than on December 1. Practically all the loss took place in tobacco factories, and in Quebec, while elsewhere comparatively slight changes were noted.

Chemical Products.—Employment in chemical and allied product plants, chiefly in Quebec and Ontario, showed a contraction on January 1, when 180 persons were released from the labour forces of the 117 reporting establishments, which had 7,975 employees. Similar declines had been noted on the corresponding date a year ago, when the index number was several points lower.

Clay, Glass and Stone Products.—Further contractions in employment were made in building material works, 142 of which reported an aggregate staff of 11,720, as compared with 13,037 in the preceding month. All provinces shared in this curtailment, which, how-

ever, was most marked in Quebec, Ontario and the Prairie Provinces. Brick and stone plants recorded important declines, which were rather smaller than those of January 1, 1929, when the employment was not so active.

Electric current.—There were large decreases in the number employed in electric current plants, according to statistics from 94 producers, employing 14,932 workers, or 720 less than on December 1. Quebec reported most of this falling-off, which involved fewer employees than that indicated at the beginning of January last year; the index then, however, was many points lower.

Electrical Apparatus.—A further reduction in personnel was registered by the 49 co-operating electrical apparatus factories, whose labour forces aggregated 15,890 persons on January 1. Employment was in much greater volume than on the same date in the preceding year, when practically no change was noted.

Iron and Steel Products.—Crude, rolled and forged, heating appliance and general plant machinery works reported decided curtailment, while considerable improvement was shown in automobile factories; the payrolls of the 674 firms furnishing data in the iron and steel group totalled 138,195, against 142,971 employees on December 1. This contraction (which was on a larger scale than on the corresponding date last year, when the index was higher) was most pronounced in Ontario, but the movement was generally downward.

Non-Ferrous Metal Products.—The loss recorded in non-ferrous metal products involved more workers than that indicated on the same date in 1929; the index then, however, was several points lower than on January 1, 1930. Returns were compiled from 109 employers of 19,359 persons, as compared with 20,190 at the commencement of December. The most noteworthy reductions were in Ontario.

Mineral Products.—Declines were noted in this group, the shrinkage being smaller than that registered at the beginning of last year. A combined working force of 14,022 persons was employed by the 79 establishments whose returns were received and who had 14,257 employees on December 1. The situation was much more favourable than on January 1, 1929.

Logging

Logging, which has been unusually active this winter, showed a larger falling-off than on the same date last year, but employment was in greater volume than at the beginning of any other January on record, the index standing at 200·2 as compared with 171·0 on January 1, 1929, and 175·1 on January 1, 1924, the previous maximum for midwinter. A combined working force of 53,943 men was reported by the 255 co-operating firms, who had 57,019 employees in the preceding month. Improvement was shown in the Prairie Provinces and Ontario, while the movement elsewhere was downward.

Mining

Coal.—There was very little change in coal mines, 80 of which reduced their payrolls from 29,804 persons on December 1 to 29,790 at the beginning of January. There was an increase in the Maritime Provinces, but contractions were shown in the Prairie coal-fields. Large declines in personnel had been indicated on January 1, 1929, and the index number was then slightly lower.

Metallic Ores.—Losses were noted in metallic ore mines, 855 workers being released from the payrolls of the 72 co-operating firms, who employed 16,932 persons at the beginning of January. All provinces registered reductions in this group, but those in Ontario were greatest. A contraction had also been indicated on January 1, 1929, when employment was not so active.

Non-Metallic Minerals (Other than coal).—The trend of employment in this division continued downward, losses being on much the same scale as on January 1 a year ago, when the index was slightly lower. Statements were received from 66 firms employing 7,698 workers, as compared with 8,760 in the preceding month. Quebec and Ontario recorded the greatest shrinkage.

Communications

Further improvement was reported in telephones, but there were decreases in telegraphs; the situation compared favourably with that on the same date in other years of the record. The payrolls of the 164 companies and branches furnishing data rose from 30,737 on December 1 to 31,208 employees at the beginning of January.

Transportation

Street Railways and Cartage.—Employment in local transportation showed a further seasonal decline, involving a much smaller number of workers than that reported on January 1, 1929, when the index number was over twelve points lower. A combined staff of 25,607 persons was employed by the 141 co-

operating firms, who had 26,129 workers in the preceding month. All provinces except Ontario shared in the reduction.

Steam Railways.—Employment on steam railways showed a decrease which was very much less extensive than that indicated on the corresponding date a year ago; the index number then, however, was rather higher than on the date under review. Improvement in the Maritime Provinces was offset by contractions elsewhere. The payrolls of the 105 companies and divisional superintendents furnishing returns aggregated 78,788 persons, as against 80,648 in their last report.

Shipping and Stevedoring.—There was a large reduction in employment in water transportation, chiefly in Quebec and Ontario, while a seasonal increase was noted in the Maritime Provinces. On the whole, a greater number of workers was let out than on January 1, 1929, when the index was slightly higher. Returns were compiled from 71 employers of 12,747 men, compared with 17,945 in the preceding month.

Construction and Maintenance

Building.—Continued curtailment of operations was shown in building construction; 686 contractors reduced their staffs from 58,570 at the beginning of December to 47,281 on January 1. The most pronounced declines were in Quebec and Ontario, but there were general losses. Less extensive decreases were indicated on January 1 last year, when the index was many points lower.

Highway.—Statements were received from 225 firms employing 10,418 workers, as compared with 22,460 in the preceding month. The greatest falling-off was in Quebec and Ontario, but the movement was generally downward. Smaller contractions were indicated at the beginning of January, 1929, when employment was in larger volume.

Railway.—A further, but much less pronounced recession was shown in this division, in which 41 employers reported 31,201 persons on their payroll, as compared with 33,239 in the preceding month. The situation was not so favourable as on January 1 a year ago, although the declines then noted were considerably greater. The Maritime Provinces and Quebec recorded advances, but elsewhere curtailment was indicated.

Services

Reduced activity was registered in service group, in which 223 firms employed 20,671 persons, or 332 less than in the preceding month. Increases were indicated at the beginning of January, 1929, when the index, as on the same date in earlier years of the record, was much lower.

Trade

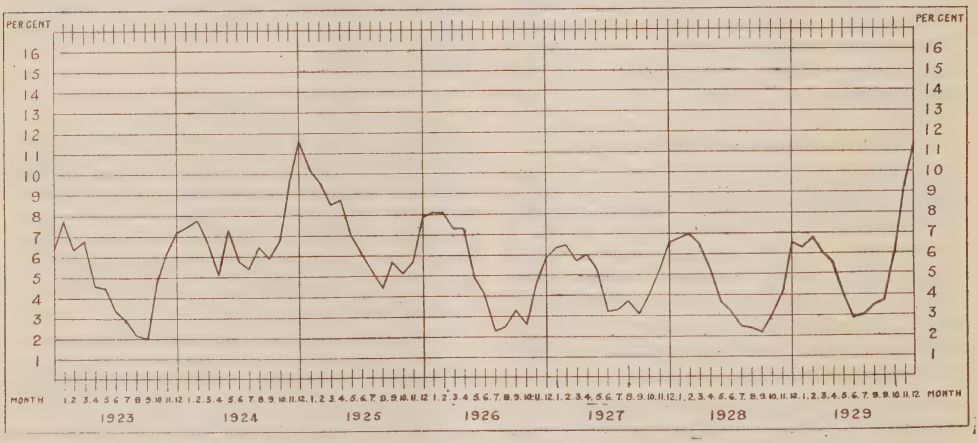
Retail and wholesale trade afforded less employment than on December 1, following an unusually active season. The 720 co-operating employers had 90,633 workers, compared with 91,762 in their last report. Employment continued at a much higher level than in the same month in any previous year for which data are available.

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

(2) Unemployment in Trade Unions at the Close of December, 1929.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployed is based, it should be understood that such figures have reference only to organizations reporting.

At the close of December reports were received by the Department of Labour from 1,790 local trade unions with a combined membership of 213,065 persons, 11·4 per cent of whom were idle contrasted with 9·3 per cent in November. Influencing the situation for December as in the previous month was the curtailment of activity for railway workers, caused by the small grain movement, combined with seasonal reductions in the garment and building trades, which in the first two named groups of workers was exceptional this year, these factors being in addition to the customary shutdowns in a number of establishments towards the close of the year for holidays, or for stocktaking and inventory purposes. The first two factors above mentioned, namely, the unusual slackness for rail-



way and garment workers, accounted largely for the lower employment level indicated during December than in the same month in 1928, when 6·6 per cent of the members were idle. Ontario unions showed more substantial reductions in activity than any of the provinces when the returns are compared with those for November, the manufacturing, building and steam railway divisions all contributing to the total decline. Although the Prairie provinces continued to feel the effects of the grain congestion through inactivity for their railway employees, still in Alberta the unemployment volume for these workers was slightly reduced. However, the contractions shown by building and construction tradesmen and among mine workers more than offset this improvement. In Quebec the garment trades continued slack, though unemployment was on a slightly smaller scale than in November. It is expected however that within a short time conditions for these tradesmen will be brighter. New Brunswick unions alone reported an upward employment tendency during December, the gains, however, being but nominal. The situation in all provinces was less favourable during December than in the corresponding month of 1928, Ontario and Quebec unions reporting reductions which involved the greatest number of workers, though viewed from a percentage basis Saskatchewan and Alberta unions showed the most outstanding change.

Each month a separate compilation is made of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these Montreal reported the greatest percentage of inactivity during December. The reduction was, however, but slightly above that recorded in November, though in comparison with December, 1928, it was substantial, due to the exceptional quietness prevailing in the garment trades during the month under review. In Regina unemployment showed a noteworthy increase in both comparisons, and recessions of somewhat lesser degree were registered by unions in Halifax, Toronto, Winnipeg, Edmonton and Vancouver. St. John unions, on the other hand, reported some improvement over November, but the situation remained practically the same as in December, 1928.

As will be noticed from the chart accompanying this article the curve of unemployment in January, 1929, showed but little change from the previous month, the projection, however, being downward and indicative of nominally improved conditions. In February, however, the reverse was the case, the unemployment volume showing a small increase. From the close of February the situation steadily improved until the end of June, when a slight falling off in employment was evident, extending with somewhat increasing volume each month until the close of the year, when the curve rested at a level considerably above that indicated at the end of 1928.

From unions in the manufacturing industries 502 reports were received during December combining a membership of 60,353 persons, 8,274 of whom, or a percentage of 13·7, were unemployed on the last day of the month, contrasted with 12·8 per cent in November. Although conditions for garment workers continued depressed, still the employment volume for these workers during December showed improvement over the No-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

vember situation. Among textile and wood workers also some gains in employment were noted. In the iron and steel group little change was indicated from the previous month, the tendency, however, being favourable, though a considerable amount of short time was registered, especially among railway carmen. The pulp and paper industry showed noteworthy reductions in activity from November, particularly in Ontario, where a number of workers were thrown out of employment when an entire plant shut down. Unemployment among fur workers also showed a large increase over November, but these workers formed but a small proportion of the total membership in the manufacturing industries, and hence do not materially affect the situation in the group as a whole. However, it is expected that the fur trade will reopen early in January. Employment for general labourers and cigar makers was considerably retarded during December, and contractions of lesser magnitude were apparent among printing tradesmen, leather and glass workers, and metal polishers, Practically all trades in the manufacturing industries reported a lower level of employment during December than in the same month of 1928 when the percentage of idleness in the group as a whole stood at 8·3, the reductions in activity reported among iron and steel workers and in the garment trades involving the largest number of workers.

The situation in the coal mining industry during December showed little change from the previous month, the 43 unions from which reports were tabulated, with 16,059 members, reporting 2·6 per cent per cent of idleness compared with 2·4 per cent in November. Alberta unions reported reductions in the employment volume over November, which were in large measure offset by the gains recorded in Nova Scotia, while in British Columbia a fully employed situation was shown in both months. Compared with the returns for December, 1928, when 3·6 per cent of inactivity was registered, Nova Scotia and Alberta unions both shared in the upward employment movement during the month under review, while in British Columbia no members were reported idle compared with a fractional unemployment percentage in December last year. Quarry workers in Nova Scotia were totally unemployed during December, shipping being finished for the year. During the previous month and December, 1928; also, large percentages of inactivity had been reported by these workers.

The building and construction trades showed further reductions in the employment volume during December, the 221 unions from which reports were tabulated, with 31,228 members, indicating 25·6 per cent of idleness compared with 16·3 per cent in November. Carpenters and joiners whose membership forms the largest percentage of any one trade included in the total, suffered pronounced curtailment of activity during December. Hod carriers and building labourers, painters, decorators and paper hangers, bricklayers, masons and plasterers and title layers, lathers and roofers also reported a large falling off in employment from November, and activity for granite and stone cutters, elec-

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

trical workers and plumbers and steamfittters eased off to some extent. Moderate gains in activity, however, were reported by steam shovel and dredgemen and bridge and structural iron workers. Depression among carpenters and joiners, as in the previous comparison, was a large factor in the increased idleness recorded over December, 1928, when 15·5 per cent of unemployment was shown in the building trades as a whole, although among bricklayers, masons and plasters also, the declines in activity registered were substantial. In addition, a lower level of employment was maintained by painters, decorators and paper hangers, plumbers and steamfitters, title layers, lathers and roofers, hod carriers and building labourers and electrical workers. On the other hand, bridge and structural iron workers, and granite and stone cutters were afforded a greater volume of work than in December, 1928.

In the transportation group 8.3 per cent of the members included in the returns were idle at the end of December, in contrast with unemployment percentages of 7.0 in November and 3.8 at the close of December, 1928. The December percentage was based on the reports tabulated from 777 unions of transportation workers, including a membership of 74,282 persons, 6,151 of whom were without employment at the end of the month. Steam railway employees, whose returns constitute over 80 per cent of the entire group membership reporting, continued to be affected by the reduced grain movement, an exceptional condition existing this year, which was the deciding factor in the group increase in unemployment recorded both over the previous month and December, 1928. Navigation workers showed a slight falling-off in activity from November, though employment was on a larger scale than in December a year ago. Among street and electric railway employees fractional recessions only were indicated in both comparisons, while the situation for teamsters and chauffeurs remained much the same during the three months compared.

From longshore workers whose returns are tabulated separately each month owing to the casual nature of their employment, 15 reports were received at the close of December, covering a membership of 6,785 persons. Of these 1,115 or a percentage of 16.4 were idle, contrasted with an unemployment percentage of 22.6 in November and with 15.9 per cent in December, 1928.

Conditions for retail clerks as shown by the reports received in December from 6 unions with 1,170 members, were considerably better than in November, although the employment volume showed a nominal increase only over December a year ago.

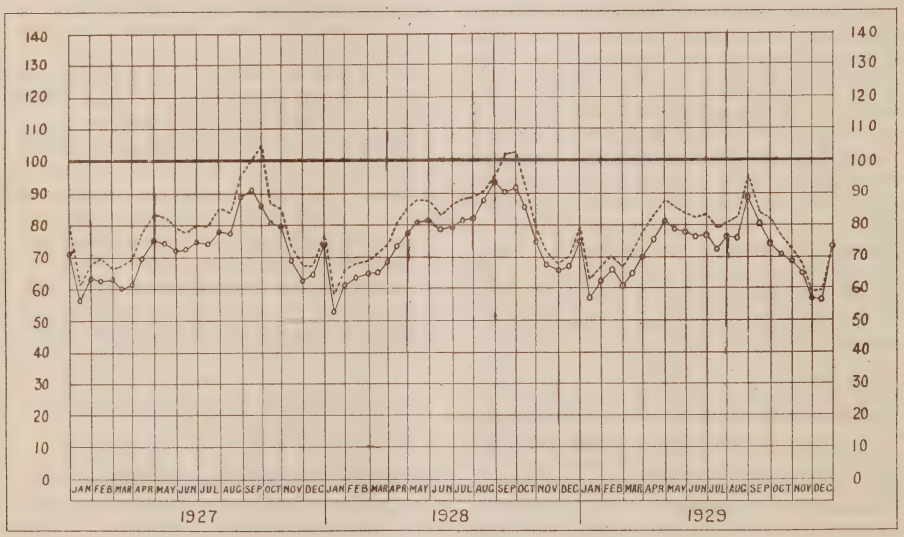
A slight change only in the situation was indicated by civic employees during December as compared with returns for both the previous month and December, 1928, the 68 unions from which reports were tabulated with a combined membership of 7,495 persons, indicating an unemployment percentage of 2.0 compared with 2.3 per cent of inactivity in November and with 1.6 per cent in December last year.

The miscellaneous group of trades, as indicated by the returns received from 117 unions with a membership aggregate of 7,485 persons, reported 5.6 per cent of the members idle at the end of December, as compared with 6.2 per cent in November and 5.1 per cent in December, 1928. Hotel and restaurant employees were more actively engaged than in November and some improvement was also noted over December a year ago. Among theatre and stage employees a slight reduction in the employment volume was manifested from November, though the situation was slightly better than in December, 1928. The employment tendency for barbers was upward during December from the previous month, though the change was nominal only and fractional gains in activity were recorded over December a year ago.

From unions of fishermen 4 reports were received at the close of December embracing a membership of 812 persons, 200 of whom, or a percentage of 24.6, were unemployed at the end of the month, contrasted with 19.7 per cent of idleness in November and with 19.9 per cent in December, 1928.

Lumber workers and loggers with 6 unions reporting 1,249 members at the end of December indicated an unemployment percentage of 2.7, compared with 6.3 per cent of inactivity in November and a fully engaged situation in December a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1928 inclusive and also the percentage of unemployment by provinces for December of each year from 1919 to 1926 inclusive and for each month from January, 1927, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.



(3) Employment Office Reports for December, 1929

The records of the Employment Service of Canada for the month of December, 1929, when compared with those of November, showed an increase of 7 per cent in the volume of business transacted. A gain of 23 per cent was also recorded when the records were compared with those of December, 1928. In both instances increased placements in construction and maintenance were responsible for the gain shown. Logging and mining also registered gains under the latter comparison, but in a much lesser degree.

The accompanying chart shows the trend of employment since January, 1927, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the Offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and also of placements in relation to applications, recorded little change during the first half of December, but during the latter half of the month under review, both showed a decidedly upward trend. At the close of the period, however, the curve of vacancies was 4 points below that attained at the close of December a year ago, while the curve of placements was nearly 2 points below that of December, 1928. The ratio of vacancies to each 100 applications was 59·3 and 75·2 during the first and second half of December, 1929, in comparison with the ratios of 70·2 and 79·4 during the same periods of 1928. The ratios of placements to each 100 applications during the periods under review were 56·6 and 73·4 as compared with 67·0 and 75·2 during the corresponding month of 1928.

The average number of vacancies reported daily by employers to the Offices of the Service throughout Canada during December, 1929, was 1,151 as compared with 1,080 during the preceding month and with 949 in December a year ago.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The average number of applications for employment received daily by the Offices during the month under review, was 1,708, the same as in November, and 1,278 during December, 1928.

The average number of placements made daily by the Offices of the Service during December, 1929, was 1,113 of which 599 were in regular employment and 514 in work of one week's duration or less, as compared with a total daily average of 1,040 during the preceding month. Placements in December a year ago averaged 902 daily, consisting of 487 placements in regular and 415 in casual employment.

During the month of December, 1929, the Offices of the Service referred 28,679 persons to vacancies and effected a total of 27,811 placements. Of these, the placements in regular employment were 14,958 of which 12,129 were of men and 2,829 of women, while placements in casual work totalled 12,853. The number of vacancies reported by employers was 21,019 for men and 7,743 for women, a total of 28,762, while applications for work numbered 42,695 of which 33,215 were from men and 9,480 from women.

During the year 1929, Offices of the Service throughout Canada reported 428,027 vacancies, 550,726 applications and 398,367 placements in regular and casual employment, a decline from 1928, which was a record year in placements in the Service.

The following table gives the placements recorded to date by the Offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367

Nova Scotia

During the month of December, 1929, positions offered through employment offices in Nova Scotia were over 10 per cent less than in the preceding month but nearly 8 per cent higher than during the corresponding month of 1928. Placements declined over 9 per cent when compared with November, but were nearly 16 per cent higher than in December a year ago. Services was the only group to show any substantial gain in placements over December, 1928. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 61; logging 46: construction and maintenance, 50; trade, 56; and services, 371, of which 294 were of household workers. There were 96 men and 57 women placed in regular employment.

New Brunswick

There was a decline of over 16 per cent in the number of positions offered through employment offices in New Brunswick during December, when compared with the preceding month, and of nearly 11 per cent in comparison with the corresponding month in 1928. Placements were over 18 per cent less than in November and 10 per cent below December, 1928. There were fewer placements in transportation, construction and maintenance, services and trade than in December a year ago, but logging showed an increase. The changes in other groups were nominal only. Placements by industrial divisions included: logging, 55; construction and maintenance, 35; services, 512, of which 362 were of household workers. Regular employment was found for 92 men and 52 women during the month.

Quebec

The demand for workers as indicated by orders received at employment offices in the Province of Quebec during December was nearly 21 per cent less than in the preceding month, but showed a gain of nearly 27 per cent when compared with the corresponding month of 1928. Placements declined nearly 29 per cent in comparison with November, but were 11 per cent higher than in December a year ago. All industrial groups except farming participated in the gains in placements over December, 1928, those in manufacturing being the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 135; logging, 669; construction and maintenance, 308; and services, 459, of which 327 were of household workers. Placements in regular employment numbered 1,143 of men and 410 of women.

Ontario

During December, employment offices in Ontario received orders for over 18 per cent more workers than in the preceding month and nearly 47 per cent more than during the corresponding month of 1928. There was a gain also in placements of over 33 per cent in comparison with November and of over 50 per cent in comparison with December, 1928. The large increase in placements over December a year ago was almost entirely due to a heavy demand for snow shovellers for street cleaning although logging and services also showed substantial gains. In manufacturing and farming, placements declined, the former showing the largest decrease. Placements by industrial divisions included: manufacturing 1,011; logging 2,164; farming 204; transportation 322; construction and maintenance 6,498; trade 588; and services, 4,269, of which 1,951 were of household workers. There were 6,842 men and 1,101 women placed in regular employment during the month.

Manitoba

Orders listed at Manitoba offices during December called for 7 per cent less workers than in the preceding month and nearly 13 per cent less than during the corresponding month of 1928. Placements declined over 25 per cent from November but were nearly 3 per cent higher than in December a year ago. Although the gain in placements over December, 1928, for the province as a whole was small there was considerable change in the different industrial divisions. Logging showed quite a substantial gain and there was improvement also in farming and mining placements. These increases, however, were offset to a large extent by decreases in services, which showed a considerable reduction. There were minor declines also in manufacturing, trade, transportation, and construction and maintenance. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 67; logging, 1,134; farming, 363; construction and maintenance, 59; trade, 160; and services, 1,562, of which 1,314 were of household workers. During the month 1,596 men and 381 women were placed in regular employment.

Saskatchewan

Opportunities for employment as indicated by orders listed at employment offices in Saskatchewan during December were nearly 7 per cent less than in the preceding month and nearly 25 per cent lower than during the corresponding month of 1928. Placements also were 8 per cent less than in November and nearly 26 per cent below December a year ago. There were fewer placements in all industrial groups except construction and maintenance and mining than in December, 1928, the declines in services and trade being the most pronounced. Snow removal under the highway division of construction and maintenance was responsible for the gains in placements. There was a small increase only in mining. Placements by industrial divisions included manufacturing, 53; logging, 130; farming, 248; transportation, 50; construction and maintenance, 342; trade, 89; and services, 797, of which 507 were of household workers. During the month 458 men and 315 women were placed in regular employment.

Alberta

Employment opportunities as indicated by orders received at employment offices in Alberta during December were over 12 per cent better than in the preceding month and nearly 27 per cent above the corresponding month of 1928. There was an increase of over 11 per cent in placements when compared with November and of nearly 29 per cent in comparison with December, 1928. The increase in placements over December a year ago was attributable to sewer construction and brush cutting, undertaken as relief work by the municipalities assisted by the Provincial Government. Transportation and mining, however, also showed gains. The only declines of importance in placements were in manufacturing and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 95 logging, 413; farming, 237; mining, 101; transportation, 132; construction and maintenance, 386; and services, 1,130, of which 575 were of household workers. Placements in regular employment numbered 1,312 men and 272 women.

British Columbia

There was a nominal decline only in the number of positions offered through employment offices in British Columbia during December when compared with the preceding month and of over 4 per cent in comparison with the corresponding month a year ago. Placements were over 3 per cent less than in November and also in December, 1928. Services was the only group to show any increase of importance in placements over December a year ago, although there was improvement also in manufacturing, construction and maintenance and other divisions in a lesser degree. Logging, transportation, trade and farming were the only groukps in which fewer placements were made. Placements by industrial divisions included: manufacturing, 283; logging, 244; farming, 52; transportation, 103; construction and maintenance, 191; trade, 125; and services, 1,004, of which 563 were of household workers. During December regular employment was found for 590 men and 241 women.

Movement of Labour

During the month of December, 1929, the offices of the Employment Service of Canada effected 14,958 placements in regular employment, 6,996 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,952 were granted the Employment Service reduced transportation rate, 1,374 going to points within the same province as the despatching office and 578 to other provinces. The reduced transportation rate, which is 2·7 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at

the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Reduced rate certificates were granted by offices in Quebec to 190 persons, during December, 180 of whom went to provincial employment and 10 to points outside. Included in the provincial movement from Quebec City were 118 bush workers going to Rouyn and vicinity, 54 bushmen to Amos and 1 camp cook within the Quebec zone, while from Montreal 7 bushmen were despatched to centres within the same zone. The 10 transfers outside the province were of bushmen travelling from Hull to Sudbury.

In Ontario 757 certificates for the reduced transportation rate were granted during December, 741 of which were issued to points within the province, and 16 to centres in other provinces. Of the provincial certificates 729 were granted to bushmen, 445 of whom went to logging camps in the Timmins zone, 222 to Port Arthur, 33 to Cobalt, 19 to Fort William, 8 to Sault Ste. Marie, and 2 to North Bay. A number of offices assisted in the transfer of these workers. In addition the Fort William office despatched 1 structural iron worker to Sudbury and 1 hotel cook to employment within its own zone, while from Toronto 1 hydro electric lineman proceeded to Sarnia and 1 clerk to Sault Ste. Marie. To points within its own zone Sudbury transferred 4 rockmen and 1 blacksmith, and this zone was the destination also of 1 lumber scaler who journeyed from Pembroke. At Ottawa 1 caretaker secured a certificate for reduced transportation to Cobalt. The one remaining provincial transfer was of a store clerk who was conveyed from Port Arthur to a point within the same zone. Of the persons travelling outside the province 15 were for the Winnipeg zone, and included 12 mine workers sent from Sudbury and 3 drillers from Port Arthur. From Sudbury also, 1 diamond driller went to employment in the Amos zone.

From Manitoba centres 683 persons travelled to employment at the special reduced rate, 150 to points within the province and 533 to other provinces. Provincially the Winnipeg office was responsible for the transfer of 1 waitress and 1 farm housekeeper to Dauphin, 1 dietitian and 1 hotel cook to Brandon, and of 88 farm hands, 1 farm housekeeper, 23 electricians, 9 bushmen, 5 miners, 2 fishermen, 2 tractor operators, 2 hotel employees, 1 laundry worker and 1 labourer to centres within the Winnipeg zone while from Dauphin 12 bushmen went to employment within its own zone. The interprovincial movement originated at Winnipeg, from which centre 409 bush workers, 6 cookees, 2 farm hands, 2 blacksmiths, 2 cooks, 1 saw-mill labourer, 1 hotel porter and 1 town general were transported to Port Arthur and 82 bushmen to points in the Timmins zone. In addition, the Regina zone received 4 farm hands, 1 farm housekeeper and 1 domestic, the Estevan zone 2 farm hands and 1 hotel waitress, Yorkton 3 farm hands, Prince Albert 2 bushmen, Saskatoon 1 farm hand, and Nelson 12 rockmen.

Workers securing certificates for reduced transportation at Saskatchewan offices during December were 125 in number, 110 of whom travelled to provincial employment and 15 to points outside the province. The transfers within the province included 79 bushmen going to camps in the Prince Albert zone, the majority of whom were recruited by this zone office. In addition, the Prince Albert office granted certificates to 7 teamsters and 1 blacksmith proceeding to employment within its own zone and to 1 bushman travelling to Yorkton. From Saskatoon 1 town domestic went to Regina, 3 farm hands to North Battleford, 2 farm hands to Moose Jaw, 1 housekeeper to Yorkton, 2 hotel workers and 1 housekeeper to Prince Albert and 3 farm hands within the Saskatoon zone. At the Regina office 1 baker received a certificate for transportation to Prince Albert, 1 farm hand and 1 hotel employee to Yorkton, and 4 farm hands to centres within the Regina zone, while from Moose Jaw 1 hotel cook was carried at the reduced rate to Regina and 1 farm hand to a point within the Moose Jaw zone. Of the persons going to other provinces 13 were electricians for the Dauphin zone, 6 of whom travelled from Saskatoon, 5 from Moose Jaw and 2 from Regina. From Saskatoon also 1 school teacher was despatched to Edmonton, and from Regina 1 bushman to Winnipeg.

Transfers at the special reduced rate from Alberta points during December were 166 in number, 163 of which were provincial and 3 interprovincial. The latter were of farm hands travelling from Calgary, 1 each going to the Saskatoon, Kamloops and Revelstoke zones. The majority of the transfers within the province were effected by the Edmonton office, which despatched 130 bush workers, 10 farm hands, 3 farm household workers, 7 saw-mill workers, 3 mine workers, 2 highway construction labourers, and 1 waitress to employment within its own zone, and 1 cook to Drumheller. From Calgary, in addition, 3 farm hands and 2 farm household workers journeyed to Lethbridge and 1 bushman to Edmonton.

In British Columbia 31 persons took advantage of the Employment Service reduced transportation rate during December, 30 of whom went to points within the province. Of these the Nelson office was instrumental in the transfer of 5 miners to Cranbrook and of 2 millwrights, 11 bush workers and 1 tractor driver to employment within its own zone. From Vancouver 6 mine workers were sent to Revelstoke, 1 cook to Nelson, 1 farm hand to Kamloops, 1 dish washer and 1 general office worker to Penticton and 1 power construction flunkey within the Vancouver zone. The 1 transfer outside the province was of a logger who was carried at the special rate from New Westminster to Calgary.

Of the 1,952 workers who benefited by the Employment Service reduced rate during December 1,400 were carried by the Canadian National Railways, 372 by the Canadian Pacific Railway, 178 by the Temiskaming and Northern Ontario Railway and 2 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada in December, 1929

The building permits issued by 61 cities in December, 1929, represented construction work valued at $15,585,992, as compared with $16,166,385 in November, 1929, and $16,095,160 in December, 1928. There was, therefore, a decline of $580,393, or 3.6 per cent in December as compared with the preceding month, and of $509,168, or 3.2 per cent in comparison with the figures for the same month in 1928, which was the highest December on record.

Detailed statements were received from some 40 cities, showing that they had issued nearly 400 permits for dwellings valued at some $3,400,000 and about 1,100 permits for other buildings at an estimated cost of approximately $11,800,000. During November, the construction was authorized of some 900 dwellings and 1,500 other buildings, estimated to cost approximately $5,000,000 and $10,500,000, respectively.

As compared with the preceding month, Saskatchewan, Alberta and British Columbia registered increases in the value of the authorized building, the gain of $1,465,995, or 466.2 per cent, in Alberta being especially pronounced. Of the declines elsewhere indicated, that of $892,485, or 26.4 per cent, in Quebec was greatest.

All provinces except Nova Scotia, Quebec and Ontario recorded increases over December, 1928, in the value of the building authorized. Alberta showed the most marked gain of $1,715,023, while the greatest decrease was that of $1,755,435, or 18.1 per cent, in Ontario.

Montreal showed decreases in the value of the building permits issued as compared with November, and also in comparison with December, 1928. In Toronto and Winnipeg, there were losses in the former and gains in the latter comparison, while Vancouver reported increases over both November, 1929, and December, 1928. Three Rivers, Westmount, Chatham, Kingston, Peterborough, Sault Ste. Marie, St. Boniface, Regina, Calgary, Kamloops and New Westminster also recorded advances in both comparisons.

Cumulative Record for 1929.—The following table shows the value of the building authorized by 61 cities during December and in the years since 1920; the 1929 figures are unrevised, while for the preceding years the statistics are revised. (A revised statement for 1929 will be issued next month). Index numbers, based upon the total value of the building authorized by these cities during 1920 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years 1920-1929. (Average 1926 =100.)

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1920=100)	Average indexes of wholesale prices of building materials twelve months (1926=100)
	$	$		
1929.....	15,585,992	235,658,524	201·4	98·0
1928.....	16,095,160	219,105,715	187·2	98·1
1927.....	11,755,566	184,613,742	157·8	96·7
1926.....	11,508,818	156,386,607	133·6	100·0
1925.....	7,363,777	125,029,367	106·8	103·8
1924.....	6,463,319	126,583,148	108·2	106·7
1923.....	6,974,256	133,521,621	114·1	111·7
1922.....	9,517,402	148,215,407	126·7	108·6
1921.....	5,537,330	116,794,414	99·8	122·7
1920.....	4,844,354	117,019,622	100·0	152·4

The December total for the 61 cities, as shown above, was only once exceeded in the record, while the unrevised statistics for 1929 indicate that last year's aggregate was larger than in any other of the nine preceding years, exceeding the previous high level of 1928 by nearly eight per cent. It is worthy of note that the 1929 total was rather greater than the combined aggregates for the years 1920 and 1921. The twelve months' total for 1929 for the 35 cities,—$211,377,000—is also the highest in the record (which for these 35 centres goes back to 1910) exceeding by about 13 per cent the previous maximum of $187,269,000 in 1928.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during December is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labour, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for January, 1930, and previous months are reproduced below.

Great Britain

Employment continued to decline during the first half of December, but in the third week of the month there was a slight net improvement. The influence of increased employment in connection with the Christmas trade and traffic had a relatively smaller effect on the numbers unemployed in all industries taken together than in other recent years, and this appears to have been due largely to the very inclement weather of November and early December, which affected most outdoor occupations, and to a decline in some other important industries, notably the textile trades. In the last week of the month there was the usual heavy increase in unemployment due to the discharge of temporary Christmas workers, and the extension of holidays in a number of industries.

A comparison of the figures for November 25 and December 16 shows that there was a general decline in the mining group of industries, in building and public works contracting, and in the cement, pottery, glass,

pig iron, leather, and chocolate and confectionery industries and most of the textile trades. On the other hand, there was some improvement in the iron and steel trades (except pig iron), in the shipbuilding, and distributive industries, and also in hotel and boarding house and dock and harbour services.

Among workpeople, numbering approximately 12,100,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at December 16, 1929, (including those temporarily stopped as well as those wholly unemployed), was 11·1, as compared with 11·0 at November 25, 1929, and with 11·1 at December 17, 1928. For males alone the percentage at December 16, 1929, was 12·3, and for females, 8·1; at November 25, 1929, the percentages were 12·1 and 7·9. The percentage wholly unemployed at December 16, 1929, was 8·9, as compared with 8·8 at November 25, 1929. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at December 16, 1929, was approximately 1,341,000, of whom 1,037,000 were men and 245,000 were women, the remainder being boys and girls. At November 25, 1929, it was 1,323,000, of whom 1,018,000 were men and 241,000 were women; and at December 17, 1928, it was 1,312,000, of whom 1,036,000 were men and 216,000 were women. At December 30, 1929, the total number registered had risen to 1,552,00, as compared with 1,565,000 at December 31, 1928.

United States

Employment in the United States decreased 2·0 per cent in December, 1929, as compared with November, and pay-roll totals decreased 0·8 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of September and October, 1929, and therefore cannot be included in the general statement for the month of December. The number of employees in Class I railroads as at October 15 totalled 1,732,858, representing an increase of 0·1 per cent since September 15. The amount of pay-roll in the entire month of October was $255,617,115, representing an increase over the previous month of 6·5 per cent.

Employment in manufacturing industries decreased 3·1 per cent in December as compared with November and pay-roll totals decreased 3·3 per cent.

The Bureau of Labour Statistics' weighted index of employment in manufacturing industries for December, 1929, is 91·9, as compared with 94·8 for November, 1929, and 95·5 for December, 1928; the weighted index for pay-roll totals is 92·0 for December, 1929, as compared with 95·1 for November, 1929, and 97·7 for December, 1928. The monthly average, 1926, equals 100.

The average index of employment for the 12 months ending December, 1929, for all industries combined was 97·5, which was 3·9 per cent above the index for the year 1928 (93·8) and 1·1 per cent higher than the index of employment for the year 1927 (96·4). The average index of employees' earnings for the 12 months of 1929 was 100·4. The index was 6·2 per cent higher than the average index for the year 1928 (94·5) and 4·0 per cent above the level of the year 1927 (96·5).

The paper group of industries alone showed a small increase in employment, the remaining 11 groups showing decreased employment. The iron and steel group reported a drop of 3·5 per cent, each industry in this group showing a loss in employees, as did each industry in the lumber, leather, chemicals, vehicle, and nonferrous metal groups of industries. The iron and steel industry decreased 5·2 per cent and foundries declined 1·8 per cent in employment. Of the 10 industries comprising the textile group, decreases in number of employees occurred in all but one industry, millinery, which registered a small increase. The hosiery and woollen goods industries decreased over 4 per cent and cotton goods decreased 1·9 per cent in employment. The slaughtering industry with a substantial increase of 3·1 per cent in December was the only industry of the food group showing improved employment conditions over the previous month.

The rayon and radio industries, which are not yet included in the bureau's indexes, both reported losses in number of workers in December, rayon decreasing 1·7 per cent and radio decreasing 49·3 per cent in employment.

The December report is based on data covering 12,185 establishments in 54 of the principal manufacturing industries in the United States. These establishments had in December 3,224,591 employees whose combined earnings in one week were $85,782,670.

The decrease in employment in manufacturing industries was reflected in each geo-

graphic division of the country, decreases of over 4 per cent occurring in 5 of the 9 divisions.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 19 per cent. The statement issued in connection with the January report shows that there were "more out of work than even in the worst month two winters ago when there was so much suffering from unemployment." The statement adds that "in the building trades, 38 per cent of members are out of work, the largest proportion for January in the three years covered by our figures. Our report also covers wage earners in shipping, railroads, hotels and restaurants, chauffeurs and truck drivers, government work, and a number of other trades and professions, including the musicians. Increasing unemployment in many of these trades together with the lay off of over 700,000 in manufacturing since September has brought the total unemployment in the United States to serious proportions."

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and

hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military or naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

Department of Marine and Fisheries

Contracts in Group "A" (Construction, etc.)

Construction of a Fisheries Experimental station at the King's Wharf, Halifax, N.S. Name of contractors, Keith Construction Co., Halifax, N.S. Date of contract, September 3, 1929. Amount of contract, $45,800. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour	
	per hour	per day	per week
Common labourers	$0 40	8	44
Building labourers	0 45	8	44
Carpenters	0 73	8	44
Bricklayers	1 00	8	44
Plasterers	1 00	8	44
Electricians	0 80	8	44
Plumbers and steamfitters	0 85	8	44
Sheet metal workers	0 77	8	44

Erection of a biological station at Prince Rupert, B.C. Name of contractors, Messrs. Mitchell & Currie, Prince Rupert, B.C. Date of contract, November 12, 1929. Amount of contract, $18,725.50. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Plasterers	$1 25	8
Electricians	1 12½	8
Sheet metal workers	1 12½	8
Felt and gravel roofers	1 12½	8
Plumbers and steamfitters	1 12½	8
Painters and paperhangers	1 00	8
Carpenters	0 93¾	8
Roofers—shingle	0 93¾	8
Cement workers	0 62½	8
Labourers	0 57½	8

Construction of a 60 foot scallop boat at Chester, N.S. Name of contractors, the Lunenburg Foundry Co., Ltd., Lunenburg, N.S. Date of contract, September 21, 1929. Amount of contract, $17,321. The General Fair Wages Clause was inserted in the contract.

Construction of a 51-foot oyster boat at Lunenburg, N.S. Name of contractors, the Lunenburg Foundry Co., Ltd., Lunenburg, N.S. Date of contract, September 21, 1929. Amount of contract, $11,743. The General Fair Wages Clause was inserted in the contract.

Construction of two 52 foot patrol boats at Vancouver, B.C. Name of contractors, Boeing Aircraft Company of Canada, Ltd., Vancouver, B.C. Date of contract, December 23, 1929. Amount of contract, $23,866. The General Fair Wages Clause was inserted in the contract.

Construction of two 60 foot patrol boats at Wallace, N.S. Name of contractors, Eastern Seaboard Steamships, Ltd., Montreal, P.Q. Date of contract, January 9, 1930. Amount of contract, $32,970. The General Fair Wages Clause was inserted in the contract.

Department of National Defence

Contract in Group "A" (Construction, etc.)

Repairs to fortification walls, Quebec, P.Q. Name of contractor, Emile Coté, Quebec, P.Q. Date of contract, January 9, 1930. Amount of contract, $5,980. A fair wages schedule was embodied in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours per day
	per hour	
Masons	$1 00	9
Labourers	0 35	9–10
Carpenters	0 55	9

Department of Public Works

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Grand'-Mere, P.Q. Name of contractors, Alphonse Beaulieu and Onesime Boisvert, Shawinigan Falls, P.Q. Date of contract, January 25, 1930. Amount of contract, $45,382.60 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours
	per hour	per day
Labourers	$0 35	9
Concrete mixers and layers	0 35	9

	per hour	
Truck drivers	0 40	9–10
Common labourers	0 45	9–10

Supply and installation of a 50,000 cubic foot capacity Gas Holder at the Montreal Air Harbour, St. Hubert, P.Q. Name of contractors, The Toronto Iron Works, Ltd., Toronto, Ont. Date of contract, January 24, 1930. Amount of contract $17,350. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours
	per hour	per day
Labourers	$0 35	10
Concrete layers	0 40	10
Concrete finishers	0 75	9
Concrete spreaders	0 40	10
Carpenters	0 85	8
Carters, horse and cart	0 60	10
Teamsters, team and wagon	0 75	10
Electric welders	0 60	8
Structural steel erectors	90	8
Structural steel rivetters	0 70–0 90	8
Rivet stickers and heaters	0 70–0 90	8

Reinforced concrete foundation for above mentioned Gas Holder at Montreal Air Harbour, St. Hubert, P.Q. Name of contractor, Albini Lacroix, St. Lambert, P.Q. Date of contract, January 18, 1930. Amount of contract, $2,345. The same fair wage schedule was inserted in this contract.

Wharf repairs and improvements at Ste. Petronille, I. O., County of Quebec, P.Q. Name of contractors, Ludger Lemieux, Ltee, Ste. Marie Beauce, P.Q. Date of contract, January 7, 1930. Amount of contract, $12,174.50, approximately. The General Fair Wages Clause was inserted in the contract.

Reconstruction of a portion of a wharf at Glace Bay, N.S. Name of contractor, Angus McAskill, Glace Bay, N.S. Date of contract, November 19, 1929. Amount of contract, approximately $15,000. The General Fair Wages Clause was inserted in the contract.

Construction of a wharf at Cocagne Island, Kent Co., N.B. Name of contractor, Ashley A. Colter, Fredericton, N.B. Date of contract, December 10, 1929. Amount of contract, approximately $9,198. The General Fair Wages Clause was inserted in the contract.

Wharf replacement at Needles, B.C. Names of contractors, F. R. McCharles and C. F. McDougall, of Nelson, B.C. Date of contract, December 30, 1929. Amount of contract, approximately $8,420.44. The general Fair Wages Clause was inserted in the contract.

Construction of a public building at Trail, B.C. Name of contractors, Moncrief & Vistaunet, Ltd., Vancouver, B.C. Date of contract, January 23, 1930. Amount of contract, $55,789 and unit prices. The General Fair Wages Clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings, etc.)

Interior fittings for public buildings at Rossland, B.C. Name of contractors, The Canadian Office and School Furniture Co., Ltd., Preston, Ont. Date of contract, December 30, 1929. Amount of contract, $3,290. The General Fair Wages Clause was inserted in the contract.

Interior fittings for the Post Office at Pictou, N.S. Name of contractors, The Canadian Office and School Furniture Co., Ltd., Preston, Ont. Date of contract, December 28, 1929. Amount of contract, $2,100. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Construction and erection of the superstructure of a steel highway swing bridge over the Rideau Canal at Hogsback Lock, Ontario. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, January 17, 1930. Amount of contract, $10,860. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours
	per hour	per day
Structural steel erectors	$1 00	8
Structural steel riveters	1 00	8
Structural steel helpers	0 60	8
Carpenters	0 90	8
Concrete workers	0 45	8–10
Labourers	0 45	8–10
Motor-truck drivers	0 50	8–10

Construction of a new lock on the Richelieu River, near St. Ours, Quebec. Name of contractors, Robertson & Janin Contracting Co., Montreal, P.Q. Date of contract, January 3, 1930. Amount of contract, approximately $390,615. The General Fair Wages Clause was inserted in the contract.

Delivery and erection of three 5,000 K.V.A. Generators at the power house, Welland Ship Canal, near Merriton, Ont. Name of contractors, The Canadian General Electric Co., Ltd., Toronto, Ont. Letter Boxes, etc.	
Eastern Steel Products, Ltd., Montreal, P.Q.	609 00
Pritchard-Andrews Co., Ltd., (locks), Ottawa, Ont.	114 24

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" conditions, shall, as far as practicable, be observed by the department or departments of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan, or guarantee for any of the purposes mentioned." Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissions throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

Returns have been received in the Department of Labour showing that the following construction contracts have been executed recently by Harbour Commissions to which fair wages conditions applied:—

HALIFAX HARBOUR COMMISSIONERS

Supplying and placing mastic flooring, in Terminal Shed No. 25, Halifax, N.S. Name of contractors, Vulcan Asphalt & Supply Co., Ltd., Toronto, Ont. Date of contract, September 16, 1929. Amount of contract, approximately $9,360. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour and expenses	per day	per week
Mastic floor layer	$1 00	8	48
	per hour		
Mastic floor joint cutter	0 80	8	48
Kettleman	0 65	8	48
Asphalt workers (labourers)	0 45	10	60

Time and half for overtime; double time for Sundays and holiday.
Ten-hour day is granted to labourers on account or report in early to get the fires going.

Construction of Pier "B" Unit, Halifax Ocean Terminals, Halifax, N.S. Name of contractors, J. P. Porter & Sons, Ltd., St. Catharines, Ont. Date of contract, January 21, 1930. Amount of contract, $2,738,209.90. The General Fair Wages Clause was inserted in the contract.

Supplying and placing mastic flooring in Transit Shed No. 23, Halifax, N.S. Name of contractors, Canadian Johns-Manville Co., Ltd., Montreal, P.Q. Date of contract, October 11, 1929. Amount of contract, approximately $8,100. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour and expenses	per day	per week
Mastic floor layer	$1 00	8	48
	per hour		
Mastic floor joint cutter	0 80	8	48
Kettleman	0 65	8	48
Ashphalt workers (labourers)	0 45	10	60

Time and half for overtime; double time for Sundays and holidays.
Ten-hour day is granted to labourers on account of reporting early to get the fires going.

Construction of Office Building and Transit Shed No. 20, Halifax, N.S. Name of contractor, A. S. MacMillan Co., Halifax, N.S. Date of contract, Feb. 2, 1929. Amount of contract, $284,800. The General Fair Wages Clause was inserted in the contract.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Transportation and Public Utilities: Water Transportation

HALIFAX, N.S.—CERTAIN STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL NO. 269.

Agreement to be in effect from November 30, 1929, to November 30, 1930, and from year to year thereafter until either party gives notice 30 days prior to November 30, of any year.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for February, 1928, with certain changes in working conditions, among which are the following:—

From 8 a.m. to 6 p.m. to be considered day hours and from 6 p.m. to 8 a.m. night hours.

Men shall not be required to work in refrigerator space on board ship longer than nine hours per day, and when working in refrigerating plant at a temperature of 26 degrees Fahrenheit or lower, they shall be paid 10 cents per hour extra.

It shall be optional for men to remain in the hold of a ship while grain is running.

Transportation and Public Utilities: Electricity and Gas

MONTREAL, QUEBEC.—MONTREAL LIGHT, HEAT AND POWER, CONSOLIDATED, AND THEIR EMPLOYEES, MEMBERS OF THE CANADIAN ELECTRICAL TRADES UNION, LOCAL NO. 1.—LINEMEN AND HELPERS.

The agreement applies to all employees of the Electrical Distribution Division (with the exception of labourers) engaged on permanent operations, and is to be in effect from July 1, 1929, to June 30, 1931, and for another year unless either party gives notice of change by May 31, 1931.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE for August, 1926, and July, 1928, with the following exceptions:—

All new employees engaged for permanent operations will be classified within sixty days after they start work.

All patrolmen will work 8 hours per day seven days per week and extra time in cases of emergency if required, as done in the past,

but will be given two weeks' vacation with pay at straight time after one year's service.

Wages per hour in overhead division: from July 1, 1929, to June 30, 1930,—first class linemen 75 cents, second class linemen 68 cents, groundsmen, 52 cents, truck drivers 53½ cents; from July 1, 1930, to June 30, 1931,—first class linemen 75 cents, second class linemen 68 cents, groundmen 52 cents, truck drivers 55 cents.

Wages per hour in underground division: from July 1, 1929, to June 30, 1930,—combination cable splicer and lineman 80 cents, cable splicers 72 cents, cable splicer's helpers 57 cents, cablemen—first class 70 cents, second class 57½ cents, third class 53 cents, truck drivers 53½ cents; from July 1, 1930, to June 30, 1931—combination cable splicer and lineman 85 cents, cable splicers 77 cents, cable splicer's helpers 60 cents, cablemen—first class 75 cents, second class 60 cents, third class 55 cents, truck drivers 55 cents.

Wages per month in patrol division: from July 1, 1929, to June 30, 1930—men in charge $168, second men $153, tower wagonmen $120, lamp changers $125, lamp trimmers $115; from July 1, 1930, to June 30, 1931—men in charge $180, second men $163, tower wagonmen $130, lamp changers $135, lamp trimmers $125.

Service: Personal

Halifax, N.S.—Master Barbers' Association and the Journeymen Barbers' International Union, Local No. 833.

Agreement to be in effect from May 20, 1929, to May 20, 1930, and from year to year until 90 days' notice is given by either party.

Wages: $15 per week guaranteed and a commission of 50 per cent on all receipts over $24 each week.

Victoria, B.C.—Working Schedule of the Journeymen Barbers' International Union, Local No. 372.

This schedule came into effect on June 3, 1929.

No barber will be allowed to work in a union shop without a union permit.

Hours: from 8 a.m. to 6 p.m. except Saturdays and nights preceding holidays when closing hour will be 8 p.m. Wednesday closing to be at 1 p.m., except when a holiday occurs in a week. One hour to be allowed at noon and one half hour for supper on days when closing is at 8 p.m.

Wages: $25 per week guaranteed and 60 per cent commission on all receipts over $39 per week. Full wages to be paid for legal holidays.

Wages and Hours of Labour in Motor Vehicle Industry in the United States

The United States Department of Labour recently published in its Wages and Hours of Labour Series, Bulletin No. 502, dealing with the motor vehicle industry in 1928. The figures were compiled from data collected by agents of the bureau from payrolls and other records of 94 establishments in 8 of the leading states engaging in this industry.

Average full-time hours per week of males in all occupations combined, increased from 50·1 in 1922 to 50·3 in 1925, and then decreased to 49·4 in 1928. Those for females decreased from 50·3 in 1922 to 50·1 in 1925 and then increased to 50·3 in 1928. Those for both sexes combined, or for the industry, increased from 50·1 in 1922 to 50·3 in 1925, and decreased to 49·4 in 1928.

Average earnings per hour of males in all occupations combined increased from 66·2 cents in 1922 to 72·9 cents in 1925 and to 75·6 cents in 1928; of females increased from 43·8 cents in 1922 to 46·7 cents in 1925 and to 48·7 cents in 1928; and of all males and females in all occupations combined increased from 65·7 cents in 1922 to 72·3 cents in 1925 and 75 cents in 1928. Between 1925 and 1928 average earnings per hour of males increased 3·7 per cent, of females increased 4·3 per cent, and of both sexes combined increased 3·7 per cent.

Average full-time earnings per week of males in all occupations combined increased from $33.19 in 1922 to $36.67 in 1925 and $37.35 in 1928; of females increased from $22.05 in 1922 to $23.40 in 1925 and to $24.50 in 1928; and of all males and females combined, or the industry, increased from $32.92 in 1922 to $36.37 in 1925 and to $37.05 in 1928.

The additional pay in the establishments in which bonuses were in operation at the time of the 1928 study was earned by production in excess of a set standard in number of units, pieces, or parts; by production in excess of a specified per cent of the set standard; by years of service; or by full time attendance.

The production bonus in some establishments was based on the work of each individual and in others on the work of a group of wage earners. The bonus earned by a group was divided among those in the group in proportion to individual earnings.

In a large number of establishments the bonus is limited to groups of productive employees. There are, owing to the great variation in the work, many groups of productive employees in an establishment. Groups vary much in number of wage earners, from a very few to as many as 50 or more. To earn a bonus it is necessary for the wage earners in a group to make a production of 75 per cent or more of the set standard for that group. For a production of 75 per cent of the set standard each employee in the group is paid his earnings at his basic time rate and also a bonus of 1 per cent of such earnings. For a production of less than 75 per cent of the standard there is no bonus, but each employee in the group is paid his earnings at his basic time rate regardless of the quantity or percentage produced.

Another group had bonus systems based on years of service only, while other establishments combined both these features.

Full particulars are given of the hours of labour, earnings, etc., of the various occupations in the motor industry.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher, while the Dominion Bureau of Statistics index number of wholesale prices was lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.88 at the beginning of January, as compared with $11.83 for December, 1929; $11.30 for January, 1929; $11.19 for January, 1928; $11.37 for January, 1927; $11.63 for January, 1926; $10.77 for January, 1925; $10.73 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $12.42 for January, 1918; and $7.73 for January, 1914. The prices of beef, veal, mutton, fresh pork, cooking eggs, milk and potatoes advanced slightly, while the prices of fresh eggs, bread, bacon, lard, beans and evaporated apples were lower. Including the cost of fuel and rent with that of foods the total budget averaged $22.17 at the beginning of January, as compared with $22.11 for December, 1929; $21.55 for January, 1929; $21.41 for January. 1928; $21.59 for January, 1927; $21.96 for January, 1926; $21.09 for January, 1925; $21.23 for January, 1924; $21.13 for January, 1923; $21.52 for January, 1922; $25.30 for January, 1921; $26.92 for July, 1920 (the peak); $19.61 for January, 1918; and $14.49 for January, 1914. Fuel was practically unchanged. A slight increase in rent was reported from Sarnia.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was slightly lower at 95·6 for January, as compared with 96·2 for December, 1929; 93·7 for January, 1929; 96·9 for January, 1928; 97·8 for January, 1927; and 103·0 for January, 1926. Ninety-six prices quotations were lower, fifty-four were higher and three hundred and fifty-two were unchanged.

In the grouping according to chief component materials one of the eight main groups advanced, six were lower and one was unchanged. Higher prices for livestock and storage eggs caused a slight increase in the Animal Products group. The groups which declined were: the Vegetable and Vegetable Products group, mainly because of lower prices for grains, rubber, coffee, and tea; the Textile and Textile Products group, because of decreased prices for jute, hessian, sisal, raw wool and wool fabrics; the Wood, Wood Products and Paper group, because of decreased prices for lath and certain lines of lumber; the Iron and its Products group, due to lower prices for steel plates, steel sheets and wire cloth; the Non-Ferrous Metals and their Products group, because of lower prices for silver, antimony, tin and zinc; and the Chemicals and Allied Products group, due to lower prices for carbon black, shellac, creosote oil and hemlock extract, which more than offset higher prices for fertilizers. The Non-Metallic Minerals and their Products group was unchanged.

In the grouping according to purpose consumers' goods were slightly higher, increased prices for meats, salt, potatoes, eggs and silk fabrics more than offsetting lower prices for flour, cotton fabrics, wool, fish and foreign fruits. Producers' goods were lower, due to decreases in the prices of materials for building and construction and also for materials for the textile and clothing industries, for the metal working industries, for the chemical using industries, for the milling and other industries, and for miscellaneous producers' materials. Materials for the fur and leather goods industries and for the meat packing industries were slightly higher.

In the grouping according to origin both raw or partly manufactured goods and fully or chiefly manufactured goods were lower, the former due to declines in the prices of grains, rubber, silver, tin and wood, which more than offset advances in the prices of livestock, hides, eggs, and raw silk, and the latter due to lower prices for flour and vegetable oils, which more than offset increases in the prices of cured meats, silk products, lime and brick. Domestic farm products, articles of forest origin and articles of mineral origin were slightly lower, while articles of marine origin advanced.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city,

except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures dur-

(Continued on page 230)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

(Continued from page 223)

ing this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of

a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1927, and monthly since January, 1928. As stated in the above mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928,

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18¼%; Clothing 18¼%; Sundries 20%.

127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1, 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices, which had declined for several months, showed an upward tendency in January, sirloin steak averaging 35·9 cents per pound, as compared with 35·1 cents in December; round steak 30·8 cents per pound in January and 30·1 cents in December; rib roast 28·7 cents per pound in January and 28·1 cents in December; and shoulder roast 22·7 cents per pound in January and 22·2 cents in December. Increases occurred in most localities. Veal and mutton prices were also slightly higher, the former being up from an average of 24·9 cents per pound in December to 25·1 cents in January and the latter from 30·2 cents per pound in December to 31·0 cents in January. Salt pork was slightly lower at an average price of 27·2 cents per pound. Bacon was down from an average of 39·7 cents per pound in December to 39·4 cents in January. Lard was slightly lower at an average price of 21·3 cents per pound.

Fresh eggs were down from an average of 65·2 cents per dozen in December to 64·4 cents in January. Cooking eggs, however, were slightly higher, being up from an average of 50·5 cents per dozen in December to 52·1 cents in January. Milk was slightly higher in the average at 12·9 cents per quart. Higher prices were reported from Oshawa, St. Catharines, Kitchener and Woodstock. Creamery butter was unchanged at an average price of 27·5 cents per pound.

Lower prices for bread were reported from Hull, Winnipeg, Prince Albert and Moose Jaw. Rolled oats were slightly lower at an average price of 6·4 cents per pound. Potatoes were slightly higher, the price per ninety pounds being up from $2.27 in December to $2.34 in January. Evaporated apples were down from an average price of 21·5 cents per pound in December to 21·3 cents in January. Prunes were slightly higher, averaging 16 cents per pound. Marmalade was down from 59·8 cents per four pound tin in December to 58·4 cents in January. Granulated sugar was unchanged at an average price of 7·3 cents per pound. Anthracite coal was unchanged at an average price of $16.22 per ton. An increase in rent was reported from Sarnia.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The trend of grain prices during January was downward. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged $1·301 per bushel, as compared with $1·378 in December. The lower prices were said to be due to the poor export demand. Coarse grains showed a movement similar to that of wheat, western barley declining from 62·2 cents per bushel to 56·7 cents, the lowest price reached since December, 1923; flax from $2.64 per bushel to $2·518; American corn from $1.04 per bushel to $1·015; western oats from 63·5 cents per bushel to 59·5 cents and rye from 94 cents per bushel to 85·4 cents. Flour prices also were lower in sympathy with the movement in wheat, the price being down from $8.60 per barrel to $8·547. Rolled oats at Toronto declined from $3.90 per ninety pound bag to $3.80. Granulated sugar at Montreal was unchanged at an average price of $5.27 per hundred pounds. Raw rubber was again lower, Ceylon being down from 16·1 cents per pound to 15·13 cents in January. Coffee was down from 26 cents per pound to 23 cents. Livestock prices, for the most part, were higher, good steers at Toronto advancing from $9.63 per hundred pounds to $9.75 and at Winnipeg from $8.91 per hundred pounds to $9.13. The price of veal calves at Winnipeg was up from $11.22 per hundred pounds to $12.81. Bacon hogs at Toronto advanced from $11.94 per hundred pounds to $13.31 and at Winnipeg from $10.36 per hundred pounds to $11.04. Beef hides advanced from 13-16 cents per pound to 14-16½ cents. Fresh eggs at Montreal declined from 67·8 cents per dozen to 62·1 cents and at Toronto from 67·1 cents per dozen to 62·1 cents. Raw cotton at New York was slightly lower at 17·22 cents per pound in January, as compared with 17·275 cents in December. Raw wool was again lower, the prices in January being 22-23 cents per pound, as compared with 24 cents in December. Wool blankets were down from $1.05 per pound in December to 97 cents in January. Black steel sheets at Montreal declined from $3.07 per hundred pounds to $2.97. The price of silver was again lower, being down from an average of 48·2 cents per ounce in December to 45 cents in January. Tin was down from 45·75 cents per pound to 44¼ cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1913=100, was 132.5 for December, a decline of 1.1 per cent from the November level. The food group as a whole fell 1.2 per cent in the month, due to lower prices for cereals and "other foods." This was partly counteracted by a substantial rise in meat and fish which group has now reached the highest monthly level recorded since January, 1926. Industrial materials also declined, all groups contributing to the movement with the exception of metals and minerals other than iron and steel.

The *Economist* index number, on the base 1927=100, was 88.3 at the end of December, showing no change from the previous month, increases in cereals and meat being counteracted by declines in other foods, textiles and miscellaneous commodities. In reviewing the movement of prices during the year 1929, the *Economist* points out that for the first four months of the year, prices were fairly stable, after which there was a steady decline continuing to the end of the year. This decline extended to all groups with the exception of an upward movement in grain prices in July. Textiles showed the greatest fall and this group was 18.8 per cent lower at the end of the year than at the beginning.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877 =100, was 108.8 at the end of December, an advance of 0.5 per cent from the previous month. This rise was due principally to an increase of 4.3 per cent in animal foods, although minerals and textiles were also slightly higher.

Cost of Living.—The index number of the Ministry of Labour, on the base July, 1914 =100, was 166 at January 1, a decline of one point from the previous month's level. This was due to a fall in the food group owing to lower prices for butter and eggs. Other groups have been unchanged since the first of November.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913 =100, was 134.3 for December, a decline of 0.9 per cent from the previous month. With the exception of vegetable foods, artificial fertilizers, technical oils and fats which showed small increases, all groups declined, the most marked falls being in animal foods, provisions and rubber.

Cost of Living.—The official index number of the cost of living, on the base 1913-1914= 100, was 152.6 for December, continuing the steady decline since August. Food and clothing prices continued to decline, while heat and light and rent were slightly higher; sundries were unchanged.

New Zealand

Wholesale Prices.—The index number of the Census and Statistics Office, on the base 1909-1913=1,000, was 1,551 for November as compared with 1,562 in the previous month. All of the main groups of commodities were lower than in October, except non-metallic minerals and their products and chemicals and manures which were slightly higher.

Cost of Living.—The official index number of the cost of living on the base July, 1914= 1,000, was 1,606 for November, just one point higher than in August; advances in groceries and meat were nearly offset by declines in dairy produce, fuel and light, clothing and miscellaneous commodities.

South Africa

Wholesale Prices.—The index number of the Census and Statistics Office, on the base 1910=1,000, was 1,276 for October, as compared with 1,289 in July. Declines in jute, leather, hides and skins, grains, etc., dairy produce, groceries, chemicals, fuel and light and soft goods were partly offset by advances in metals, meat, building materials and miscellaneous commodities.

Cost of Living.—The official index number of retail prices of food, fuel, light, rent and sundries, on the base 1910=1,000, was 1,419 for November, a decline of 3 points from October.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 94·2 for December, a decline of 0·2 per cent from November. Slight declines were noted in all of the main groups, with the exception of farm products, building materials and house furnishing goods which showed small advances.

99633—9½

Bradstreet's index number showing the cost of a list of 106 commodities was $11.5141 at February 1, a decrease of 1.4 per cent from January 1, and being the lowest index number recorded since February, 1922, and also a decline of 11.3 per cent since February 1, 1929. Live stock and provisions were very slightly higher than the previous month, but all other groups were lower, the most notable declines occurring in textiles and fruit.

Dun's index number, which is the estimated cost *per capita* of a year's supply of commodities in wholesale markets was $184.426 at February 1, a decline of over one per cent from the previous month. With the exception of meat and "other food," all groups declined. Breadstuffs and clothing showed the greatest decline.

COST OF LIVING.—The indext number of the National Industrial Conference Board, on the base July, 1914=100, was 162.0 for December, as compared with 163.0 for November. Food, housing and sundries were lower, while there were slight increases in clothing and fuel and light.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929

THE number of fatal industrial accidents (including such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc.) which were recorded in the Department as occurring during the fourth quarter of 1929, was 389, there being 151 in October, 138 in November and 100 in December. The report for the third quarter of 1929 was given in the LABOUR GAZETTE, November, page 1301. In the fourth quarter of 1928, 435 fatal accidents were recorded (LABOUR GAZETTE, February, 1929, page 248). The supplementary lists of fatal industrial accidents on pages 243-246 contain 1 for 1928 and 105 for the first three quarters of 1929. In this series of reports it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and from certain other official sources; and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1929 were as follows: agriculture, 37, logging, 54, fishing and trapping, 11; mining, non-ferrous smelting and quarrying, 61, manufacturing, 51, construction, 65, transportation and public utilities, 79, trade 11, service 20.

Of the mining accidents, 29 were in "metalliferous mining," 22 were in "coal mining," 5 in "non-metallic mineral mining and quarrying," and 5 in "structural materials."

Of the accidents in manufacturing, 2 were in "vegetable foods, drink and tobacco," 2 in "animal foods," 1 in "textiles and clothing," 2 in "leather, fur and products," 1 in "rubber products," 13 in "saw and planing mill products," 6 in "pulp, paper and paper products," 3 in "printing and publishing," 15 in "iron, steel and products," 1 in non-ferrous metal products," 4 in "non-metallic mineral products," and one in "chemical and allied products."

In construction there were 31 fatalities in "buildings and structures," 4 in "railway construction," 15 in "highway and bridge," and 15 in "miscellaneous construction."

In transportation and public utilities, there were 33 fatalities in "steam railways," 2 in "street and electric railways," 19 in "water transportation," 2 in "air transportation," 9 in "local transportation," 11 in "electricity and gas," and 3 in "telegraphs and telephones."

In trade there were 4 fatalities in "wholesale" and 7 in "retail."

Of the fatalities in service, 9 were in "public administration," 2 in "recreational," 1 in "laundering, dyeing and cleaning," 3 in "custom and repair," 2 "in personal and domestic," and 3 in "professional establishments."

There was no serious disaster resulting in the loss of a very large number of lives during the period under review. Accidents involving the loss of two or more lives were as follows:—

On December 28 four farm hands near St. Julie de Verchères, Que., were crushed under a barn floor which collapsed under heavy weight of grain.

Four miners of Levack, Ont., were crushed on December 15, by a blazing timber which fell down a shaft during a fire in a mine when the head frame collapsed as they attempted to ride to safety in a sinking bucket.

On November 20 three fishermen perished when trapped in a blizzard on Lake Winnipeg, Man.

Three members of a mining exploration party were drowned in Little Joe Lake, Ont., when their canoe was swamped in rough water.

Three employees of a publishing firm in Montreal received fatal injuries on December 23 when a gasoline tank exploded.

Two fishermen were drowned in Cormorant Lake, Man., on November 20, when an ice floe fell to pieces, and another two fishermen were drowned in Lake Athapapuskow, Man., on the same date when their provision laden sled broke through the ice.

Two coal miners at Cadomin, Alberta, were killed by a premature explosion during blasting operations about November 13.

On November 21 two labourers engaged in road construction were killed in a collision of a train with a truck in which they were riding.

Two well drillers near London, Ont., were overcome by gas fumes on October 17, while drilling in a well that had dried up.

On October 28 a railway engineer and fireman were crushed under their engine when it was derailed near Sangudo, Alberta. Another railway engineer and fireman were killed in a collision of two locomotives near Jasper, Alberta, on November 26.

On December 30 an engineer and brakeman were drowned at Boothroyd, B.C., when their engine went over an embankment into a river after running into a rock slide.

Supplementary Lists of Accidents

The supplementary list of fatal accidents occurring in 1928, to be found after the main table of accidents, contains one fatality which occurred in transportation and public utilities in November.

Concluding the lists is a supplementary list of fatal industrial accidents occurring during the first three quarters of 1929. This includes 105 fatalities, of which one was in agriculture, 27 in logging, 3 in fishing and trapping, 5 in mining, non-ferrous smelting and quarrying, 25 in manufacturing, 18 in construction, 15 in transportation and public utilities, 6 in trade and 5 in service. One of these accidents occurred in February, 8 in April, 15 in May, 18 in June, 28 in July, 19 in August and 16 in September.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Farmer	Near Cargill, Ont	About Oct. 5	45	Crushed under heavy rock which he was burying.
Farmer	Near Kitscoty, Alta	" 5	.....	Thrown under wheels of wagon when team bolted on meeting truck.
Farmer's wife	Winnipegosis dist	About Oct. 6	.....	Perished in fire while trying to protect hay stacks.
Farmer's son	Limestone Lake, Alta	Oct. 8	14	Buried when bank caved in while digging out clay.
Farmer	Near St. George, Ont	" 8	69	Gored by bull.
Farm hand	Near Aurora, Ont	" 8	28	Fell beneath wheels of tractor.
Apple picker	Near Chesley, Ont	" 16	69	Fell from apple tree when limb broke.
Farmer	Near St. Brieux, Sask	" 17	17	Injured when gasoline drum exploded.
Farm hand	Near Stettler, Alta	" 21	16	Kicked in head by horse.
Farmer	Near Elva, Man	" 24	50	Burned in fire that destroyed his home.
Farmer	Near Moosomin, Sask	" 24	70	Perished in fire which he started in brush pile.
Farmer	Near Norquay, Sask	About Oct. 28	.....	Crushed under heavy rock which he was burying.
Farmer	Ste. Agathe dist., Man	" 29	25	Thrown to roadway when his horses ran away.
Farmer	Near Apple Hill, Ont	" 29	41	Collision of train with their milk wagon.
Farmer	Near Apple Hill, Ont	" 29	72	
Farm hand	Brookdale, Man	Nov. 1	50	Fell from loft in barn, injuring spine.
Farmer	Near Pembroke, Ont	" 11	50	Thrown from wagon when team bolted.
Farmer	Saint Eloi, Que	" 11	51	Fell from wagon load of grain.
Farmer	Near Stonewall, Man	" 13	72	Fell from load of wood and wheels passed over him.
Farmer's son	Dundalk, Ont	" 15	14	Thrown from wagon and was run over when horses bolted.
Farmer	Near Cantley, Que	" 19	.....	Struck by falling tree while cutting his supply of wood.
Farmer	Near St. Thomas, Ont	" 23	76	Crushed between straw stack and manure spreader when reins caught in machinery.
Farmer	Near Cochrane, Alta	" 24	67	Burned in fire that destroyed his home.
Farmer	St. Hubert Annex, Que	" 28	70	Fell from load of hay, fracturing skull.
Farmer	Okotoks, Alta	Dec. 1	72	Gored by bull.
Farmer	St. Nazaire de Chicoutimi, Que	" 6	55	Struck by piece of steel which broke from machine he was operating.
Farmer's son	Near Chinook, Alta	" 9	20	Strangled when his scarf caught in feed grinding machine.
Farm labourer	Cumberland, B.C	" 10	.....	Injured while blasting out stumps.
Farmer	Upsala, Ont	" 21	.....	Kicked by horses.
Farmer	St. Agathe, Que	" 24	50	Kicked by horses.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—*Con.*				
Farmer	Near Lindsay, Ont.	Dec. 25		Trampled by horse.
Farmer	Near Stanstead, Que.	" 26	40	Injured when his arm caught in clutch pulley of gasoline engine.
Farm hand	Near St. Julie de Vercheres, Que.	" 28	17	Crushed under barn floor which collapsed under heavy load of grain.
Farm hand		" 28	18	
Farm hand		" 28	18	
Farm hand		" 28	12	
Gardener	Islington, Ont.	" 30	70	Struck by falling tree.
LOGGING—				
Hooktender	Bute Inlet, B.C.	Oct. 1	49	Skull fractured, died Oct. 15.
Logger	Englewood, B.C.	" 1	53	Struck by tree.
Signalman	Port Renfrew, B.C.	" 3	40	Struck by rolling log.
Wood-cutter	Near Port Arthur, Ont.	" 4	24	Crushed by falling tree.
Sectionman	Bloedel, B.C.	" 5	60	Crushed by rolling log.
Labourer on Provincial boat	Shipshaw River, Que.	" 7	19	Fell overboard and drowned.
Labourer	Bonaventure River, Que.	" 8	24	Drowned.
Horse tender	Clova, Que.	" 8	67	Burned in car carrying horses when car took fire.
Labourer	Gull Lake, Que.	" 10	30	Fractured skull.
Logger	Haney, B.C.	" 11	25	Struck by log while loading logs.
Teamster	Shelley, B.C.	" 13	45	Team rolled on him.
Logger	Near Alert Bay, B.C.	" 15	.....	Fell from log and drowned.
Logger	Emberton Woods, Que.	" 24	60	Tree fell on him.
Engineer	Near Port Alberni, B.C.	About Oct. 25	29	Fell under wheels of truck when it skidded.
Logger	Near Chilliwack, B.C.	Oct. 26	40	Struck by falling snag.
Logger	Northumberland, N.B.	" 28	66	Struck by tree, fractured skull.
Labourer	Flanders, Ont.	" 29	51	Strained while lifting obstruction on skidding trail. Died Nov. 4.
Labourer	Pakesley, Ont.	" 30	65	Kicked by horse, died Nov. 6.
Labourer	North Bay, Ont.	" 30	35	Struck by falling tree.
Bucker	Port Renfrew, B.C.	" 30	26	Crushed by log.
Sawyer	Lumberton, B.C.	Nov. 4	30	Hit by dead tree top.
Logger	Duncan, B.C.	" 5	25	Crushed by logs.
Logger	Osaquan, Ont.	" 7	21	Struck by falling tree.
Rigging slinger	Bloedel, B.C.	" 9	40	Crushed by log.
Blasting man	Smooth Rock Falls, Ont.	" 9	29	Struck by block of wood during blasting operations.
Logger	Goward, Ont.	" 10	19	Drowned when canoe upset.
Logger	Aleza Lake, B.C.	" 11	38	Struck by falling snag fracturing skull, died Nov. 12.
Faller	Menzies Bay, B.C.	Nov 11	40	Pinned by falling tree.
Logger	Near Ignace, Ont.	" 12	27	Struck by falling tree.
Woodcutter	Lac Noir River, Que.	" 12	24	Injured internally, died Nov. 13.
Logger	Nicholson, Ont.	" 13	.....	Struck by falling tree, fracturing skull.
Labourer	Trinity Bay, Que.	" 14	22	Drowned.
Logger	Van Anda, B.C.	" 14	45	Struck in neck by falling snag on March 3, 1926.
Foreman	Bloedel, B.C.	" 18	64	Fell off bridge, broken neck.
Sawyer	Giscome, B.C.	" 20	.....	Hit by falling snag, died Nov. 21.
Logger	Elk Bay, B.C.	" 22	42	Crushed chest.
Faller	Reed Bay, B.C.	" 25	42	Struck by falling snag.
Logmaker	Fee Spur, mileage 33½, Ont.	" 25	40	Struck by falling tree.
Hook tender	Cowichan Lake, B.C.	" 29	30	Struck by falling snag, fractured skull.
Pulp cutter	Great Falls, Man.	" 30	29	Struck by falling tree.
Logmaker	Fee Spur, Ont.	" 30	23	Crushed under falling tree.
Logger	Alert Bay, B.C.	Dec. 1	40	Fell from row boat, and drowned.
Truck driver	Rossland, B.C.	" 3	42	Crushed under logs while unloading them from truck.
Logger	Cowichan Lake, B.C.	" 3	22	Crushed by a rolling log.
Logger			23	
Superintendent	near Great Central Lake, B.C.	" 5	37	Struck by donkey cable and thrown against truck.
Labourer	Dean Lake, Ont.	" 6	23	Struck by falling tree, fracturing skull. Died, Dec. 8.
Logger	near Gilmour, Ont.	" 12	49	Struck by falling tree, fractured skull. Died, Dec. 16.
Logger	Willow River, B.C.	" 14	.....	Hit by falling snag.
Labourer	St. Perpetue, Que.	" 16	35	Crushed by falling tree. Died Dec. 17.
Logger	near Flanders, Ont.	" 23	.....	Struck by falling tree.
Logger	Barnstown Township, Que.	" 27	51	Struck by falling tree.
Head loader	Great Central, B.C.	" 28	43	Struck by rolling log, fractured spine.
Tie maker	Lac La Biche, Alta.	" 28	26	Struck by falling tree.
FISHING AND TRAPPING—				
Fisherman	Moose Lake, Man.	Oct. 4	17	Caught in storm and drowned.
Fisherman	near Powell River, B.C.	Nov. 4	48	Pulled overboard and drowned while casting net when feet became caught in it.
Trapper	Rainy Lake, Ont.	" 7	60	Shot in mistake for deer.
Fisherman	Lake Winnipeg, Man.	" 20	24	Frozen when trapped in blizzard on lake, third man died Nov. 27.
Fisherman			28	
Fisherman			19	

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—*Concluded.*				
Fisherman	Cormorant Lake, Man.	Nov. 20	.....	Drowned when an ice floe fell to pieces.
Fisherman		" 20		
Fisherman	Lake Athapapuskow, Man.	" 20	.....	Drowned when their provision-laden sled broke through ice.
Fisherman				
Fisherman	Peter Pond Lake, Alta.	Dec. 8	35	Drowned when his truck went through ice
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining—				
Miner	Kirkland Lake, Ont.	Oct. 7	47	Succumbed to heart attack while working underground.
Drill runner	Frood Mine, Ont.	" 16	24	Explosion of delayed dynamite charge.
Miner	Rouyn, Que.	" 21	.....	Fell down shaft.
Driller	Frood, Ont.	" 24	28	Fell from ladder, into steel chute, fracturing skull. Died Oct. 25.
Mucker	Wawa, Ont.	Nov. 10	23	Overcome from powder gas in mine.
Runner	Timmins, Ont.	" 14	22	Struck by flying rock during blasting operations, fractured skull, died Nov. 15.
Member of exploration party.	Little Joe Lake, Ont.	" 14	65	Drowned when their canoe was swamped in rough water.
" "			30	
" "			30	
Shaftman	Bradley, Ont.	" 18	24	Secondary silicosis, laid off on June 20.
Cage tender	Near Sudbury, Ont.	" 22	32	Skull fractured by sudden drop of elevator cage after it had been stuck in shaft.
Miner	Near Sudbury, Ont.	" 28	25	Injured during blasting operations.
Miner			29	
Caretaker of mine	Near Cobalt, Ont.	" 28	.....	Pneumonia following exposure in mine.
Worker in ore dressing mill.	New Denver, B.C.	" 29	20	Thrown against pulley while putting on belt, fractured skull.
Helper	Anyox, B.C.	Dec. 2	40	Fell into rock crusher.
Miner	Kirkland Lake, Ont.	" 3	38	Back broken by flying rock when an air pocket blew out in mine in Sept. 1928.
Trammer	Creighton Mine, Ont.	Dec. 5	29	Struck on head by bar which he was using to load car, died Dec. 6.
Blaster	Creighton Mine, Ont.	" 5	27	Fell 26 ft. in mine chute, following fall of rock, fractured skull, died Dec. 7.
Miner	Kirkland Lake, Ont.	" 11	54	Explosion of dynamite stick while he was thawing it out.
Miner	Levack, Ont.	" 15	32	Crushed by blazing timber which fell down shaft during fire in mine when head frame collapsed as they attempted to ride to safety in sinking bucket.
Miner	" "		32	
Miner	" "		34	
Miner	" "		35	
Mine worker	Red Lake, Ont.	" 14	28	Fell out of cage while coming up shaft after having been gassed.
Miner	Timmins, Ont.	" 18	22	Crushed by fall of rock, fractured skull.
Miner	Gowganda, Ont.	" 18	28	Leg crushed by falling rock, died Dec. 19.
Mine worker	Tadanac, B.C.	" 19	44	Fell into railway pit, fractured skull.
Miner	Creighton Mine, Ont.	" 28	28	Skull fractured while in mine.
Coal Mining—				
Miner	Near Drumheller, Alta.	Oct. 4	49	Crushed by fall of rock.
Miner	Wayne, Alta.	" 7	40	Pinned beneath fall of rock in mine, died Oct. 8.
Miner	Carbon, Alta.	" 11	36	Crushed by fall of rock.
Miner	Mercoal, Alta.	" 17	52	Struck by post which was knocked out by cutting machine when haulage prop broke, died Oct. 30.
Shot firer	Glace Bay, N.S.	" 17	59	Struck by coal box.
Manager of mine	Drumheller, Alta.	" 19	52	Electrocuted when he touched high tension wire.
Miner	Sydney Mines, N.S.	" 22	.....	Injured in mine, died Oct. 25.
Miner	Nanaimo, B.C.	" 26	50	Crushed by fall of rock.
Miner	Sydney Mines, N.S.	Nov. 2	.....	Struck by train.
Power plant workman.	Glace Bay, N.S.	" 4	33	Head of after-cooler blew out and struck him in face while he was making repairs to it.
Miner	Sydney Mines, N.S.	" 5	62	Crushed under descending cage at bottom of shaft.
Miner	Cadomin, Alta.	About	52	Premature explosion during blasting operations.
Miner	" "	Nov. 13	27	
Electrician	Stellarton, N.S.	Nov. 15	25	Electrocuted when he slipped and fell from switchboard and came in contact with current.
Miner	Bellevue, Alta.	" 25	25	Crushed by fall of rock.
Trip runner	Springhill, N.S.	" 28	22	Struck by end of boom of trip of timber.
Chain runner	Glace Bay, N.S.	Dec. 13	17	Injured by run-away trip, fractured skull.
Miner	Drumheller, Alta.	" 18	50	Crushed by fall of rock.
Miner	Drumheller, Alta.	" 18	49	Crushed against wall by empty coal car when it jumped track.
Miner	Nanaimo, B.C.	" 18	37	Crushed by fall of rock.
Miner	Near Ladysmith, B.C.	" 22	31	Trapped under cave-in.
Miner	Near Nanaimo, B.C.	" 22	55	Crushed by cave-in of rock and coal.
Non-metallic mineral, mining and quarrying—				
Driller	Bella Bella, B.C.	Oct. 15	46	Fell off boom and drowned.
Miner	Thetford Mines, Que.	Nov. 15	18	Fell down shaft in mine.
Dumper	St. Remi, Que.	" 28	35	Head crushed when chain support broke.
Miner	Thetford Mines, Ont.	Dec. 3	49	Run over by train.
Miner	Thetford Mines, Que.	" 10	21	Injured by delayed dynamite blast.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
STRUCTURAL MATERIALS—				
Teamster in gravel pit.	Bartonville, Ont.	Oct. 15	37	Injured by cave-in of gravel pit. Died Oct. 17.
Gravel pit worker	Near Vulcan, Alta.	" 19	.....	Buried by cave-in of gravel.
Gravel pit worker	Near Belleville, Ont.	" 27	45	Crushed under cave-in of gravel.
Operator of gasoline engine in quarry	St. Sebastien, Que.	" 28	19	Crushed when he fell on caterpillar chain. Died Oct. 29.
Quarry worker	Beche, Que.	Nov. 8	34	Crushed by heavy stone when it fell from crane.
MANUFACTURING—				
Vegetable foods, drink and tobacco—				
Worker in bakery	Ottawa, Ont.	Oct. 16	19	Crushed in elevator shaft.
Miller	Sandy Lake, Man.	Nov. 2	45	Skull fractured when his flour grinding machine exploded.
Animal foods—				
Worker with fish packers	Ritherton Bay, B.C.	Nov. 4	42	Head caught in fly wheel.
Creamery manager	Nanton, Alta.	" 29	37	Struck by train at crossing.
Textiles and Clothing—				
Elevator man	Drummondville, Que.	Oct. 31	.....	Neck broken and skull crushed.
Leather, fur and products—				
Worker in tannery	Plessisville, Que.	Oct. 29	30	Electrocuted while repairing motor.
Fireman with tanners	Near Toronto, Ont.	Dec. 24	.....	Slipped and fell downstairs. Died Dec. 26.
Rubber products—				
Worker in rubber factory	Montreal, Que.	Oct. 5	.....	Collapsed from heart failure while at work.
Saw and planing mill products—				
Machine hand	Orillia, Ont.	Oct. 3	54	Struck by piece of plank while operating rip saw. Died Oct. 9.
Edgerman	Nanoose, B.C.	" 9	40	Pinned between upright and log.
Mill worker	Kelowna, B.C.	" 10	21	Struck by belt when it broke. Died two days later.
Millman	Madawaska, N.B.	" 18	17	Fell on log. Fractured skull.
Sawyer	Victoria Co., N.B.	" 23	27	Struck by stick from saw. Died Oct. 25.
Tail sawyer	Blind River, Ont.	" 25	43	Crushed against mill when slab caught in carriage. Died Nov. 3.
Saw operator	Rawdon, Que.	" 25	47	Clothing became caught in teeth of circular saw.
Saw operator	Bathurst, N.B.	Nov. 5	34	Struck by circular saw when it flew off machine.
Edgerman	Fort Langley, B.C.	" 26	50	Injured by piece of lumber which shot back from planer.
Blacksmith with lumber manufacturer	Cache Bay, Ont.	" 29	69	Scratched elbow while cutting steel plates. Died Dec. 8.
Helper	Gunton, Man.	Dec. 2	15	Fell on saw of wood-cutting machine.
Slinger	Vancouver, B.C.	" 14	33	Timber fell on him, fracturing skull. Died Dec. 25.
Sawmill owner	Clark Bridge, N.B.	" 20	.....	Caught in shaft.
Pulp, paper and paper products—				
Steamfitter	Near Quebec, Que.	Oct. 3	45	Fell into tank full of acid used for cooking solution for pulp.
Oiler	Gatineau, Que.	" 4	20	Caught in machinery, fractured skull.
Labourer	Temiskaming, Que.	" 12	50	Run over by freight car.
Millwright	Powell River, B.C.	Nov. 23	34	Struck by plank.
Electrician	Dalhousie, N.B.	" 29	.....	Electrocuted when he came in contact with high tension wire
Labourer	Three Rivers, Que.	Dec. 25	46	Burned when he touched live wire.
Printing and Publishing—				
Printer's assistant	Montreal, Que.	" 23	65	Burned by explosion of gasoline tank.
Pressman	" "		29	
Assistant pressman	" "		20	
Iron, steel and products—				
Labourer with implement mfrs.	Toronto, Ont.	Oct. 8	53	Grinders' phthisis, laid off on Feb. 14, 1928.
Labourer in machinery plant.	Sherbrooke, Que.	" 8	24	Fell from ladder while cleaning window when he came in contact with live wire. Fractured skull.
Labourer	Sydney, N.S.	" 12	21	Fell 54 feet from ladder, fracturing skull.
Carpenter	Sydney, N.S.	" 12	58	Collision of auto with wagon in which he was driving to work.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—*Conc.*				
Iron, steel and products—Conc.				
Labourer at structural steel plant.	Sherbrooke, Que.	Nov. 1	28	Crushed by falling steel beam when it fell from derrick when clamp slipped.
Arc welder with auto mfrs.	Windsor, Ont.	" 4	38	Injured by air hose which fellow-worker was operating. Died Nov. 11.
Machinist in machinery factory.	Hamilton, Ont.	" 5	63	Struck by pulley when it broke while planing casting. Injured leg. Died Dec. 8.
Labourer	Toronto, Ont.	" 15	30	Explosion of gasoline tank when workmen started to repair it with torch. Died Nov. 16.
Millwright	Toronto, Ont.	" 20	47	Electrocuted and fell 20 ft. in plant when he stepped on transformer.
Worker repairing tar tank.	Toronto, Ont.	" 22	.....	Injured when blow torch caused explosion of tar tank. Died Dec. 23.
Switchman	Hamilton, Ont.	" 27	35	Crushed and burned when three-ton hot ingot fell on him.
Helper on cutting machine.	Sarnia, Ont.	" 27	32	Fell while extricating obstruction from machine. Fractured skull. Died Nov. 28.
Machinist in tool factory.	Galt, Ont.	" 29	66	Stake flew back and struck him rupturing his bowels. Died Dec. 3.
Labourer	Toronto, Ont.	Dec. 4	28	Struck by ladle handle when it slipped while turning out large iron mould. Broken neck.
Worker at engine works.	Brantford, Ont.	" 9	62	Struck by chain when it broke.
Non-ferrous metal products—				
Millwright with aluminum manufacturer.	Arvida, Que.	Oct. 20	29	Electrocuted when he fell on line after losing his footing on pole.
Non-metallic mineral products—				
Worker in asphalt plant.	Hamilton, Ont.	Oct. 1	60	S truck on head by wrench while unloading car of stone.
Worker in gypsum plant.	Elora, Ont.	" 15	41	Fell into hopper and suffocated under ton of lime.
Labourer with cement company.	Montreal, Que.	Nov. 24	23	Crushed when stone rolled over him.
Worker in oil refinery	Toronto, Ont.	Dec. 16	20	Burned when tank of oil took fire. Died Dec. 23.
Chemical and allied products—				
Worker in gas plant	Vancouver, B.C.	Oct. 8	17	Struck by counter weight of elevator. Fractured skull.
CONSTRUCTION—				
Buildings and structures—				
Plumber	Montreal, Que.	Oct. 2	42	Fell 25 ft. when plank broke, fracturing skull.
Plasterer	Nelson, B.C.	" 7	50	Fell from scaffold, fracturing skull.
Contractor	Calgary, Alta.	" 11	62	Struck by falling girder.
Elevator signal man.	Quebec, Que.	" 12	38	Fell from sixth floor to basement. Died Oct. 14.
Labourer	Montreal, Que.	" 17	45	Fell from scaffold. Died Jan. 2, 1930.
Labourer	Campbellton, N.B.	" 19	22	Fell from scaffold. Died Oct. 20.
Building inspector	Montreal, Que.	" 29	44	Struck by swinging derrick and fell 40 ft. from beam.
Labourer	Toronto, Ont.	" 30	38	Fell from roof of building. Died Nov. 1.
Steel worker	Copper Cliff, Ont.	" 31	28	Struck by piece of falling machinery.
Labourer on oil refining construction.	Sarnia, Ont.	Nov. 8	35	Crushed when heavy section of tank fell on him while it was being erected.
Carpenter	Near Val Morin, Que.	" 11	21	Drowned when boat in which he was conducting men to work upset.
Iron worker	Restigouche Co., N.B.	" 14	36	Fell 19 feet injuring head.
Carpenter	Quebec, Que.	" 21	25	Fell 30 ft. from scaffolding. Died Nov. 24.
Carpenter	Tilsonburg, Ont.	" 23	76	Injured by fall while at work. Died Nov. 25.
Elevator installer	Ottawa, Ont.	" 23	35	Fell down elevator shaft while installing doors.
Painter	Copper Cliff	" 25	28	Fell from scaffold. Fractured skull.
Carpenter's helper	Toronto, Ont.	" 25	40	Fell from scaffold, through sky-light to floor.
Chimney repairman.	Montreal, Que.	" 24	20	Fell from roof of school.
Erector of iron works	Toronto, Ont.	Dec. 3	28	Fell from projecting angle onto steel rod which pierced his leg. Died Dec. 5.
Labourer with engineering contractor	Toronto, Ont.	" 4	40	Crushed between truck and steel plate by pinch bar while unloading channel irons. Died Dec. 11.
Painter	Halifax, N.S.	" 5	31	Fell from roof of grain elevator. Fractured skull.
Painter	Saskatoon, Sask.	" 5	34	Fell 30 ft. to concrete floor when he grasped live wire.
Labourer	Guelph, Ont.	" 10	30	Crushed beneath mass of broken earth which broke away from wall of excavation.
Plumber	Montreal, Que.	" 11	19	Burned when blow torch exploded. Died Jan. 29.
Storekeeper with building contractors.	Toronto, Ont.	" 11	.....	Iron block fell on him, injuring head. Died Dec. 27.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Conc.*				
Buildings and Structure—Conc.				
Truck driver	Toronto, Ont.	Dec. 14	41	Collision of train with his truck. Died Dec. 15.
Engineer	West Point Grey, B.C.	" 16	35	Crushed by huge boulder.
Carpenter's foreman	Price, Que.	" 18	27	Electric burns to head. Died Dec. 23.
Fitter's helper	Port Robinson, Ont.	" 20	.....	Slipped and fell from steel structure. Died Dec. 24.
Labourer	Toronto, Ont.	" 20	25	Fell 50 ft. down shaft of building.
Elevator installer	Toronto, Ont.	" 30	30	Fell down elevator shaft.
Railway—				
Gravel pit worker	Near Larchwood, Ont.	Oct. 16	19	Buried by cave-in of gravel.
Contractor foreman	Saskatoon, Sask.	" 23	51	Run over by freight cars at gravel pit.
Rock worker	Kootenay Lake, B.C.	Nov. 16	45	Injured by delayed dynamite blast.
Labourer	Near Stoney Creek, Ont.	" 26	45	Injured by accidental detonation of dynamite charge in missed hole.
Highway and Bridge—				
Labourer	Wadhope, Man.	Oct. 1	25	Struck on head by rock during blasting operations.
Quarry worker	St. Vincent de Paul, Que.	" 1	18	Injured when hand car on which he was riding collided with wagon.
Labourer	Near Brampton, Ont.	" 8	69	Run over by motor truck. Died Oct. 9.
Painter	Port Colborne, Ont.	" 11	43	Trapped beneath counterbalance when bridge was raised.
Labourer	Near Danville, Que.	" 24	53	Truck in which he was driving upset into ditch. Broken neck.
Engineer	Near Laprairie, Que.	" 24	48	Injured in collision of two locomotives used for road construction.
Worker with paving company	Cobourg, Ont.	Oct. 30	43	Crushed under 15 tons of gravel when steam shovel collapsed.
Engineer with bridge builders	Isle Maligne, Que.	" 30	53	Crushed under derrick car.
Bridge inspector	Toronto, Ont.	" 31	55	Fell from planking into channel and drowned.
Labourer in gravel pit	Near Foxboro, Ont.	Nov. 7	31	Collision of car with buggy in which he was riding to work. Fractured skull.
Labourer	Spruce Grove, Alta.	" 21	23	Collision of train with camp truck in which they were riding.
Labourer			34	
Teamster	Near Arthur, Ont.	" 22	22	Slipped beneath wheel of stone crusher. Died Nov. 25.
Farmer	St. Clotilde, Que.	" 25	33	Crushed by fall of gravel.
Inspector	St. Viau Vill. Que.	Dec. 4	70	Knocked down by truck. Died Dec. 7.
Miscellaneous—				
Electrician on canal gates construction	St. Catharines, Ont.	Oct. 3	44	Electrocuted when he came in contact with high voltage wire.
Worker on telephone line construction	Regina, Sask.	" 7	19	Struck by pole as it was unloaded by derrick from truck.
Labourer on dam construction	Seven Sisters Falls, Man.	Oct. 8	.....	Struck by rolling stump while working on hill. Died Oct. 9.
Lineman on line construction	Provost, Alta.	" 9	51	Fell from pole.
Well driller	Near London, Ont.	" 17	69	Overcome by gas fumes while drilling in well that had dried up.
Well driller			32	
Labourer on canal construction	Port Robinson, Ont.	" 21	About 50	Head crushed when truck on which he was riding overturned.
Contractor on wharf construction	Kamouraska, Que.	" 22	50	Drawn into gear when coat became caught. Died Oct. 24.
Well driller	Chatham, Ont.	" 28	60	Arm torn in well drilling machine. Died Nov. 3.
Foreman at golf grounds construction	Montebello, Que.	" 29	43	Collision of train with his car.
Well digger	Aylwin, Que.	Nov. 4	30	Electrocuted when ladder came in contact with high tension wire.
Groundman on power line construction	Saseenos, B.C.	" 20	50	Electrocuted when he touched high tension wire.
Worker on telephone line construction	Meteghan River, N.S.	Dec. 2	32	Fell from pole when cross arm broke. Broken neck. Died Dec. 4.
Blacksmith with contractor on deepening channel	Near Brockville, Ont.	" 6	.....	Fell overboard from tender and drowned.
Concrete man on sewer construction	Toronto, Ont.	" 27	35	Fell in 20 foot excavation. Died Dec. 28.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam railways—				
Section labourer	Near Kimberley, B.C.	About Oct. 5	.....	Run over by track motor. Fractured skull.
Labourer	Ashcroft, B.C.	Oct. 7	47	Fell off trestle.
Labourer	Windsor, Ont.	" 11	41	Run over by switch engine.
Foreman of scrap yard	Toronto, Ont.	" 12	.....	Fell from platform injuring side. Pneumonia. Died Oct. 30.
Labourer	Near North Bay, Ont.	" 13	36	Struck by train.
Roundhouse worker	Brantford, Ont.	" 15	48	Struck by train.
Track labourer	Tecumseh, Ont.	" 18	About 55	Struck by freight train.
Conductor	Toronto, Ont.	" 24	53	Slipped and fell to floor of his train. Died Oct. 25.
Engineer Fireman	Near Sangudo, Alta.	" 28	....	Crushed under engine when it was derailed.
Brakeman	New Westminster, B.C.	" 31	35	Run over by car during switching operations. Died Nov. 1.
Fireman	Near Canyon, Ont.	Nov. 3	43	Scalded when engine was derailed after it smashed into a rock slide.
Labourer	Weir, Que.	" 6	19	Fell between rail loader and car.
Conductor	McAlpin Station, Ont.	" 6	53	Slipped on platform and fell under wheels of train. Fractured skull.
Bridgeman	Near Digby, N.S.	" 7	32	Crushed beneath wheels of train.
Brakeman	Corbetton, Ont.	" 15	35	Slipped and fell under wheels of car when he jumped off train.
Station agent	Armagh, Que.	" 19	38	Drowned when he fell into water tank.
Hostler	Fort Erie, Ont.	" 21	.....	Leg severed while crawling under car.
Brakeman	Tracadie, N.B.	" 23	49	Fell from top of box car during shunting operations. Died Nov. 25.
Engineer Fireman	Near Jasper, Alta.	" 26	47 37	Collision of two locomotives.
Sectionman	Englehart, Ont.	Nov. 30	55	Run over by engine.
Asst. foreman	Montreal, Que.	" 30	60	Struck by street car. Died Dec. 16.
Worker in coal yard	Brandon, Man.	Dec. 2	41	Buried under coal slide.
Brakeman	Chatham, Ont.	" 7	21	Slipped and fell under wheels of train during switching operations.
Roundhouse worker.	London, Ont.	" 15	44	Struck by heavy bar while loosening locked wheel on engine and was knocked into engine pit.
Fireman	Edmundston Yd., N.B.	" 18	25	Injured when engines side-swiped. Died Dec. 21.
Engineer	Near St. Eustache, Que.	" 18	50	Crushed when his engine was derailed and fell off bridge while attached to snow plow.
Bridgeman	Kootenay Landing, B.C.	" 20	20	Crushed between cars.
Fireman	Montreal, Que.	" 24	.....	Struck by engine.
Engineer Brakeman	Boothroyd, B.C.	" 30	 41	Drowned when their engine went over embankment into river after running into rock slide.
Street and Electric Railways—				
Track labourer	Calgary, Alta.	Oct. 9	64	Pneumonia following injuries and shock after being struck by street car. Died Oct. 18.
Motorman	Near Glace Bay, N.S.	" 26	34	Collision of freight car with tram car he was driving.
Water Transportation—				
Captain of steamer	En route from Montreal, Que.	" 3	.....	Swept overboard and drowned.
Lock tender	Thorold, Ont.	" 13	50	Drowned when his car fell into locks when brakes failed.
Diver	Quebec, Que.	" 18	26	Fell from deck of ship and drowned.
Seaman	Richibucto, N.B.	" 19	25	Drowned from schooner.
Watchman	Montreal, Que.	" 22	44	Fell into hold of ship when struck by box swinging on derrick.
Light keeper	Quatsino Sound, B.C.	" 23	46	Drowned from row boat in rough sea.
Deck hand	Coal Harbour, B.C.	" 29	39	Fell off tug boat and drowned.
Sailor	Near Ile-aux-Coudres, Que.	Nov. 5	20	Knocked overboard and drowned when struck by boom.
Seaman	Three Rivers, Que.	" 5	34	Drowned.
Sailor	Lake Ontario off Brighton, Ont.	" 15	18	Swept overboard and drowned during heavy storm.
Stevedore	Toronto, Ont.	" 17	49	Fell from freighter while reaching for derrick rope.
Sailor	Quebec, Que.	" 20	.....	Injured by fall.
Ferry operator	Harrop, B.C.	" 20	43	Overcome by carbon monoxide gas while repairing pipe under engine.
Dredge worker	Oshawa, Ont.	" 20	25	Fell into harbour and drowned.
Longshoreman	Montreal, Que.	" 26	30	Thrown from car and run over by train when it shunted.
Watchman on barge	Montreal, Que.	" 27	24	Fell into canal and drowned.
Dredge worker	Near Belleville, Ont.	Dec. 16	18	Slipped through dumper into bay and drowned.
Scowman	Vancouver, B.C.	" 17	22	Drowned when scow overturned.
Sailor	Esquimalt, B.C.	" 25	32	Electrocuted when he came in contact with fallen live wire.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION—*Con.*				
Air transportation—				
Pilot	Winnipeg, Man.	Oct. 13	24	Injured in plane crash.
Pilot	Mayo, Yukon	Nov. 1	.....	Killed when his plane crashed through ice.
Local transportation—				
Taxi driver	Portneuf, Que.	Oct. 9	34	Collision of train with his car.
Truck driver	Near Bladworth, Sask.	" 9	22	Injured when truck overturned after tire blew out.
Chauffeur	Montreal, Que.	" 12	29	Injured wrist from cranking truck, pneumonia. Died Dec. 12.
Teamster	Montreal, Que.	" 18	41	Fell from wagon fracturing skull. Died Oct. 19.
Labourer with Carting Co.	Ameliasburg Twp., Ont.	" 25	45	Buried by cave in at gravel pit.
Truck driver	Near St. Janvier, Que.	Nov. 14	28	Struck by auto while repairing truck.
Taxi driver	Near Fort William, Ont.	" 26	21	Shot while in his car.
Truck helper	St. Ours, Que.	Dec. 6	26	Drowned when truck fell through ice while crossing river.
Truck driver with transfer Co.	Winnipeg, Man.	" 23	62	Collision of street car with his truck.
Electricity and gas—				
Lineman	Near L'Assomption, Que.	Oct. 1	65	Burned by electric shock when he touched live wire. Died Oct. 3.
Painter	Falls View, Ont.	" 3	25	Electrocuted when he touched live wire.
Lineman	Charette Mills, Que.	" 6	24	Electrocuted.
Lineman	Winnipeg, Man.	" 14	52	Electrocuted when he touched high voltage cable.
Lineman	Ottawa, Ont.	" 16	21	Struck by pole.
Labourer	Near Springhill, N.S.	" 16	45	Explosion of box of dynamite which he was carrying.
Electrician	Aylmer, Ont.	" 23	24	Electrocuted when he touched live wire.
Lineman	St. John Co., N.B.	" 23	40	Burned by electric current. Died Oct. 26.
Chore boy at power plant.	Quinze River, Que.	Nov. 2	24	Drowned.
Lineman	Quebec, Que.	About Dec. 20	.....	Electrical shock while repairing high tension lines. Died Dec. 23.
Sub-station attendant.	North Bay, Ont.	Dec. 27	34	Electrocuted.
Telegraphs and telephones—				
Telegraph messenger	Victoria, B.C.	Oct. 31	14	Struck by delivery wagon. Fractured skull.
Lineman	St. Barthelmi, Que.	Nov. 22	27	Crushed under pole while unloading poles from truck.
Lineman	Petrolia, Ont.	Dec. 3	.....	Electrocuted when telephone line became crossed with high tension wire.
TRADE—				
Wholesale—				
Grain buyer	Metiskow, Alta.	Nov. 10	26	Burned in grain elevator.
Truck driver for brewery	Near Mitchell, Ont.	" 15	22	Injured when his truck skidded and crashed into tree.
Delivery asst.	Courtland, Ont.	" 30	38	Collision of freight train with their truck.
Truck driver for distillers			35	
Retail—				
Fruit dealer	Near Hamilton, Ont.	Oct. 11	20	Collision of their truck with another truck.
Fruit dealer			52	
Truck driver for bakery	Guelph Highway, Ont.	" 14	20	Collision of his truck with another truck. Fractured skull. Died Oct. 27.
Baker	Elora, Ont.	Nov. 13	.....	Collision of train with his delivery truck.
Labourer with glass dealers	Montreal, Que.	" 28	62	Cut hand with putty knife. Died Dec. 17.
Milkman	Kitchener, Ont.	Dec. 25	30	Crushed under milk sleigh when it overturned.
Teamster with coal company	Winnipeg, Man.	" 18	51	Crushed between coal sled and wall of coal shed.
SERVICE—				
Public Administration—				
Traffic officer	Near Hamilton, Ont.	Oct. 3	35	Motorcycle swerved off highway and crashed into tree.
City workman	St. Catharines, Ont.	" 4	59	Run over by truck—fractured skull. Died Oct. 5.
Watchman at Park	Montreal, Que.	" 18	45	Burned from explosion when he used gasoline in coal oil stove.
Street cleaner	St. Boniface, Man.	Nov. 4	68	Struck by auto.
Labourer with city engineering dept.	Winnipeg, Man.	" 4	59	Struck by street car when horse bolted while he was holding it.
Park ranger	Near Petawawa, Ont.	" 12	71	Shot while on duty.
Labourer working on street	Toronto, Ont.	" 16	37	Struck by taxi.
Fireman	Montreal, Que.	" 16	.....	Collision of truck with fire-truck on which he was riding.
Fire chief	Islington, Ont.	" 26	.....	Injured when fire truck in which he was riding was overturned.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1929—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
SERVICE—*Conc.*				
Recreational—				
Truck driver for golf club	Fonthill, Ont.	Oct. 29	20	Neck broken when his truck overturned.
Night watchman at club	Ste. Marguerite Stn., Que.	Nov. 11	74	Succumbed to shock when he was wakened by fire in room.
Laundering, dyeing and cleaning—				
Laundryman	Montreal, Que.	Oct. 2	40	Struck by auto while delivering laundry—fractured skull. Died Oct. 6.
Custom and repair—				
Garage mechanic	Hamilton, Ont.	Nov. 13	.....	Asphyxiated by gas fumes from auto exhaust.
Night watchman at garage	Belleville, Ont.	Dec. 22	44	Burned when his clothing ignited. Died Jan. 4, 1930.
Worker in blacksmith shop	Smiths Falls, Ont.	Dec. 26	42	Trampled by horse.
Personal and domestic—				
Hotel employee	Brandon, Man.	Oct. 20	29	Crushed by elevator.
Watchman	Toronto, Ont.	Nov. 7	68	Fell from burning building when rope broke.
Professional establishments—				
Asst. gardener at hospital	Brockville, Ont.	Oct. 11	43	Skull fractured when attacked by insane patient. Died Oct. 13.
Furnaceman at school	Quebec, Que.	" 11	50	Asphyxiated by gas fumes when furnace exploded.
Electrician at hospital	Toronto, Ont.	Dec. 26	44	Electrocuted while making repairs on switchboard.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1928

TRANSPORTATION—				
Water—				
Fireman on ferry boat	Quebec, Que.	Nov. 13	34	Drowned.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST THREE QUARTERS OF 1929

AGRICULTURE AND STOCKRAISING—				
Caretaker of farm of pulp mfrs	Alma Farm, Que.	June 15	58	Drowned.
LOGGING—				
Drive foreman	L'Assomption, Que.	April 15	41	Cut in knee. Blood poisoning. Died Sept. 9.
Bush hand	Pontiac Co., Que.	" 17	69	Kicked by horse.
Labourer	River St. Francois, Que.	May 7	17	Drowned.
Labourer	Causapscal, Que.	" 11	19	Fell through ice while crossing river and drowned.
Driver	Caribou Creek, Que.	" 12	21	Fell from pile of logs.
River driver	St. Omer, Que.	" 16	22	Struck by log. Skull fractured.
Labourer	Harrison Mills, B.C.	" 17	49	Struck by skyline. Fractured spine. Died Oct. 3.
Labourer	Causapscal, Que.	" 22	20	Drowned while floating logs.
River driver	North Angliers, Que.	" 25	35	Fell into river from log jam and drowned.
Log driver	Dartmouth River, Que.	June 1	35	Drowned.
Log driver	Mattawin River, Que.	" 2	20	Drowned.
Log driver	Causapscal, Que.	" 3	18	Drowned.
Log driver	Gatineau River, Que.	" 14	.....	Drowned.
Foreman	Batiscan Falls, Que.	" 15	47	Drowned.
Log driver	Shelter Bay, Que.	" 20	31	Struck by log. Fractured skull.
Log driver	Dumoine River, Que.	July 1	23	Drowned.
Logger / Logger	Vermilion River, Que.	July 5	24 / 20	Drowned.
Log driver	Fitzpatrick, Que.	" 13	23	Drowned.
Labourer	Mont Louis, Que.	" 16	18	Drowned.
Fire ranger for lumber company.	Kamischigama, Ont.	Aug. 12	19	Drowned.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST THREE QUARTERS OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—*Continued*				
Teamster	Shelley, B.C.	Aug. 13	50	Crushed under team when they lost footing on side hill and rolled down ravine while skidding logs.
Logger	Jervis Inlet, B.C.	" 27	18	Struck by falling snag.
Faller	Twp. of Riddle, Ont.	" 29	40	Struck by falling tree, fracturing skull.
Woodcutter	Woburn, Que.	Sept. 20	55	Struck by log. Died Sept. 24,
Teamster	Near Galloway, B.C.	" 20	68	Struck by rolling logs.
Teamster	Colwood, B.C.	" 28	55	Run over by wagon wheel while hauling cord wood.
FISHING AND TRAPPING—				
Fireman on fishing boat.	Senneterre, Que.	May 15	25	Drowned when boat sank.
Labourer on fishing boat.			25	
Labourer on fishing boat.			23	
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining—				
Timber boss	Kirkland Lake, Ont.	June 16	46	Secondary silicosis. Laid off on March 26, 1929.
Beltman	Noranda, Que.	July 27	37	Caught between belt and pulley. Died Aug. 17.
Non-metallic mineral, mining and quarrying, n.e.s.—				
Carpenter at asbestos mine.	Asbestos, Que.	July 5	33	Blood poisoning from scratch. Died June 14.
Dumper at bins at asbestos mine.	Megantic, Que.	Aug. 8	23	Fractured skull. Died Aug. 12.
Car loader	St. Louis, Que.	Sept. 20	18	Internal hemorrhage from strain.
MANUFACTURING—				
Saw and planning mill products—				
Labourer with box mfrs.	Notre Dame de Ham, Que.	May 1	.....	Hand injured by circular saw. Heart failure after operation.
Carpenter	Maskinonge, Que.	" 14	59	Struck in side by plank. Died May 17.
Truck driver	Kitchener, Ont.	" 15	29	Internally injured when he fell from truck while loading lumber. Died Sept. 26.
Woodcutter for lumber contractor.	Quebec, Que.	June 29	47	Drowned.
Labourer	Price, Que.	July 5	40	Caught in belt shaft.
Labourer	Port Arthur, Ont.	" 8	51	While piling lumber, got a sliver in hand. Blood poisoning. Died Nov. 16.
Machine operator	Bromptonville, Que.	" 20	16	Struck by piece of timber.
Carpenter	Montebello, Que.	" 23	59	Crushed chest.
Labourer	Marsouins, Que.	Aug. 3	50	Groin lacerated by saw teeth. Died Sept. 8.
Woodcutter	Flamand, Que.	" 9	39	Drowned in creek.
Labourer at saw mill.	Lachute, Que.	Sept. 10	14	Drowned.
Wood products—				
Shaper in furniture factory.	Stratford, Ont.	" 10	68	Hand cut by hand saw. Infection. Died Oct. 22.
Pulp, paper and paper products—				
Machine operator	Shawinigan Falls, Que.	July 3	54	Collapsed while at work.
Labourer	Van Bruysell, Que.	" 8	56	Blood poisoning through infected scratch in hand. Died July 28.
Labourer	Temiskaming, Que.	" 13	21	Fractured skull.
Labourer	Shelter Bay, Que.	July 23	18	Drowned.
Electrician	Gloucester Co., N.B.	Aug. 18	24	Fell into river. Fractured skull.
Printing and publishing—				
Messenger	Quebec, Que.	July 10	14	Broken neck.
Iron, steel and products—				
Labourer in steel foundry	Hull, Que.	Feb. 14	57	Bruised finger necessitating amputation. Died April 30.
Moulder at furnace factory.	Brampton, Ont.	June 25	33	Body burned by hot mould. Died Dec. 4.
Labourer	Montreal, Que.	July 22	24	Struck by falling steel beam.
Ironworker's helper.	Cornwall, Ont.	Sept. 19	33	Iron tank fell on him while he was working on side of it. Fracture of pelvis. Died Oct. 11.
Non-metallic mineral products—				
Lathe hand at gas plant.	Montreal, Que.	June 12	22	Slow poisoning from acid fumes.
Brakeman with asbestos mfrs.	Asbestos, Que.	July 4	24	Decapitated by freight car.

SUPPLEMENTBRY LIST OF FATAL INDUSTQIAL ACCIDENTS OCCURRING DURING FIRST THREE QUARUERS OF 1929—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality

Buildings and structures-				
Labourer	Rivière-à-Pierre, Que.	April 19	22	Fractured spine from fall.
Carpenter	Racine, Que.	May 10	23	Struck by piece of timber. Back and internal injuries. Died May 27.
Engineer	Quebec, Que.	" 18	49	Fell 50 ft. to cement floor. Fractured skull.
Rigger	Montreal, Que.	June 8	34	Fell from derrick, fracturing skull.
Plasterer	Montreal, Que.	July 3	43	Fractured skull.
Labourer	Montreal, Que.	" 6	52	Broken legs. Internal injuries. Died July 13.
Building and Structures-				
Electrician with electrical contractors.	Montreal, Que.	Aug. 14	36	Struck by street car. Died Aug. 15.
Labourer	Montreal, Que.	" 26	25	Fell from scaffold. Died Jan. 26.
Carpenter	Gloucester Co., N.B.	Sept. 30	52	Fell from loft, fracturing skull. Died Oct. 3.
Shipbuilding—				
Boilermaker's apprentice	Sorel, Que.	Aug. 27	21	Arm smashed. Died Aug. 28.
Highway and bridge—				
Metal puncher	Lachine, Que.	April 8	44	Struck by piece of broken punch. Hemorrhage.
Labourer	Lachine, Que.	About April 15	.....	Drowned.
Labourer	Rougemont, Que.	July 18	14	Asphyxiated by fall of sand.
Labourer	Sunbury Co., N.B.	Aug. 19	62	Struck by auto. Fractured skull.
Labourer	Near Elginfield, Ont.	Sept. 27	36	Struck by truck.
Miscellaneous—				
Labourer	Montreal, Que.	Aug. 16	22	Drowned.
Engineer with engineering co.	Lac à Beauce, Que.	Sept. 18	35	Crushed between two trucks.
Labourer on sewer construction	Restigouche Co., N.B.	" 28	21	Struck by train.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam railways—				
Labourer	Montreal, Que.	June 21	49	Fractured skull.
Station agent	Riviere du Loup, Que.	July 13	54	Fractured skull.
Machineman	Montreal, Que.	Aug. 23	69	Apoplexy following injury. Died Sept. 9.
Trackman	Levis, Que.	Sept. 24	22	Struck by street car.
Extra labourer	Rivière du Loup, Que.	" 27	20	Broken jaw, skull and spine.
Section man	Auldgirth, B.C.	" 30	62	Leg infection following injury.
Street and electric railways—				
Car operator	Sherbrooke, Que.	Aug. 13	18	Struck by auto. Died Aug. 14.
Water transportation—				
Fireman	Montreal, Que.	April 15	23	Asphyxiated by fumigating gases.
Sailor	Cascades Point, Que.	July 29	23	Drowned.
Labourer	Three Rivers, Que.	Sept. 1	.....	Drowned.
Seaman	Quebec, Que.	" 7	19	Drowned.
Local transportation—				
Truck driver	St. Chrysostôme, Que.	June 26	20	Truck overturned. Fractured skull.
Electricity and gas—				
Labourer at power plant	Lake St. John, Que.	June 4	20	Drowned.
Pipefitter at power plant	Shawinigan Falls, Que.	July 31	27	Electrocuted.
Telegraphs and telephones—				
Lineman	Sunbury Co., N.B.	July 25	50	Struck by train. Died Aug. 9.
TRADE—				
Wholesale—				
Agent for machinery manufacturers	St. Anges, Que.	April 11	51	Foot cut by circular saw. Died July 22.
Salesman with petroleum products	Montreal, Que.	July 13	36	Injured when his auto collided with street car.
Elevator man with paper company	Montreal, Que.	Aug. 8	63	Fractured skull, concussion. Died Aug. 12.
Presser with tobacco merchants	L'Epiphanie, Que.	" 23	53	Fractured skull.

SERVICE—				
Public administration—				
Fire ranger	Big Trinity Range, Que.	June 11	20	Drowned.
Labourer on road repairs	Pointe du Lac, Que.	" 24	18	Struck by auto.
Fire ranger	Trinity Bay, Que.	" 28	18	Drowned.
City labourer	Toronto, Ont.	July 22	57	Braised shin on tin can while tramping garbage in cart. Infection. Died Oct. 9.
Labourer on municipal repairs	Montreal, Que.	Aug. 2	36	Struck by iron bar.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Interference by Third Party with Workman's Employment

A WORKMAN who had been employed by a general contractor in British Columbia, on being discharged, threatened his former employer that he would "get even with him". Later, he obtained employment by the hour with a sub-contractor on the same contract, the terms of his employment being such that his services could be dispensed with at any time, with or without cause. On the request of the general contractor the sub-contractor discontinued the workman's employment, although he was satisfied with the latter's work. The workman then sued the general contractor for damages for having caused his dismissal. The trial judge found that there was justification for the defendant's interference with the plaintiff's employment with the sub-contractor, and dismissed the action. The plaintiff appealed against this decision, which however was sustained by the British Columbia Court of Appeal, Chief Justice Macdonald stating as follows:—

"The only point of importance involved in the appeal is a question of malice, and that seems to me to be immaterial when the malicious act resulted in no unlawful conduct. It is not questioned that the defendant brought about the dismissal of the plaintiff, or to be more accurate, the refusal to continue him in his employment. But the plaintiff had no right to be continued in his employment, and what happened brought about no breach of contract. I think it might be fairly said that the defendant's conduct in the matter was malicious, but as it resulted in no legal wrong, plaintiff has no cause of action." *Divers v. Burnett (British Columbia), 1930 (1) Western Weekly Reports, page 150.*

Prohibitive Sunday Legislation is Reserved for Dominion

The legislative authority exercised respectively by the Dominion and the Provinces of Canada in regard to Sunday observance was defined by Mr. Justice Martin in the Saskatchewan Court of Appeal, in the course of a recent judgment which declared that a certain municipal by-law was *ultra vires* because it was prohibitive in its purport.

"Legislation of a prohibitive character," he said "passed for the purpose of compelling observance of the Lord's Day, falls within subsection (27) of section 91 of The British North America Act, which confers upon the Dominion Parliament exclusively jurisdiction to legislate in respect of the criminal law. Following the reference to the Supreme Court, the Lord's Day Act was enacted, and appears as R.S.C., 1906, chapter 153 (now R.S.C. 1927, chapter 123). The Act, by section 4, prohibits the doing of certain things on Sunday, 'except as provided herein or in any Provincial Act,' and, under the provisions of section 15, Acts in force in any province of Canada at the time relating to the observance of the Lord's Day, are not in any way affected. The Lord's Day Act was an attempt to enact prohibitive legislation with regard to the observance of Sunday for the whole Dominion; recognizing, however, the different circum-

stances which prevail in the several provinces, Parliament delegated to the Legislatures the power to declare that any act prohibited by the Dominion Act might be exempted from the operation of the Act and allowed to be done by appropriate provincial legislation, either existing at the time or subsequently enacted. This being so, in considering provincial legislation with respect to Sunday, one must inquire whether it is legislation permitting something to be done on Sunday which is prohibited by the Dominion Act; if it is, the legislation is valid, because this power is delegated to the province by the Federal Act; if, however, provincial legislation is prohibitive and not permissive, it is, so far as it is prohibitive, *ultra vires*."—*Clarke* versus *Rural Municipality of Wawken*, 1930 (1) Western Weekly Reports, page 324.

Liability of Principal for the Negligence of an Agent

In a case heard by the British Columbia Supreme Court of Appeal in January, the question of the liability of a company for the negligence of one of its agents was decided in the affirmative. The "agent" in this case, while demonstrating a car belonging to the company to a prospective purchaser, ran down a foot-passenger on the street, and the latter sued the company and its agent for damages. This claim had been allowed by the jury which heard the case. On appeal by the defendants the Appeal Court confirmed the judgment of the lower court, holding that "the liability arises for wrongs committed in the course of service for the benefit of the principal, or for the mutual benefit of both. The appellant Company put Thomson (the agent) in its place to sell cars: to do a certain class of acts which without him or others like him it would do itself. That is agency."

Mr. Justice Macdonald cited a judgment of Baron Bramwell in 1858, which said: "It seems to me that the difference between the relations of master and servant and of principal and agent is this: a principal has the right to direct what the agent has to do: but a master has not only that right, but also the right to say how it is to be done."

The court found that in this case the relationship of principal and agent existed. "That being so," it was stated, "the principal is liable for the negligence of its agent in the course of his employment, although the principal did not necessarily direct it, and appellant is liable for the negligence, if any, of Thomson."

Katz versus *Consolidated Motors Limited* and *Thomson, British Columbia, 1930.* (*1*) *Western Weekly Reports*, page 305.

CORRECTION

The publication of the provisional assessment rates to be levied on employers in New Brunswick in 1930 for Workmen's Compensation was noted in the last issue of the Labour Gazette, some of these rates being quoted. The New Brunswick *Gazette* subsequently published a correction in regard to the rate for Class 2 (logging, etc.) which had been erroneously given as $7, instead of $5 as formerly. This assessment for this industrial group therefore remains unchanged at $5 per $100 of payroll.

THE INTERNATIONAL LABOUR ORGANIZATION

Address delivered by Mr. P. M. Draper, Secretary of the Trades and Labour Congress of Canada, before a Study Group of the Ottawa Branch of the League of Nations Society in Canada.

IN this presentation it is my hope to stimulate interest in the International Labour Organization, an active interest that will lead at least some of my hearers to study for themselves the organization which I shall attempt to briefly describe, rather than to undertake to give a complete and sufficient picture of that institution. The written constitution of the International Labour Organization, usually briefly referred to as the I.L.O., both in extent and detail, is not unlike the constitution of a nation, and in fact some nations possess less complete written constitutions. Therefore, it will be obvious that in the time at my disposal I can give only a fleeting glimpse of its main structure—draw only the crude outlines, as it were, and leave it to any who desire to do so to complete the picture for themselves by filling in the details through study of the perfectly adequate literature on the subject available to them. Likewise with the problems that have engaged the attention of the International Labour Organization since its inception, only casual reference may here be made to them. Mention of them will show that they are without exception matters on each of which volumes have been written in a multitude of tongues, and a comprehensive review of what the International Labour Organization may have contributed toward their solution will have to be reserved for some other occasion.

Before proceeding to a discussion of the structure and work of the I.L.O., I should like to dwell for a moment on the desirability of Canadians becoming fully acquainted with this new departure in international relations. Our constitutional authorities agree that in its contact with countries outside of the British Empire, Canada came of age during the Great War, and gained formal recognition of its international nationhood in the signing of the treaties of peace that officially terminated hostilities. Since that time, as a member of the League of Nations, as a member of the International Labour Organization and in other ways, Canada has not only maintained her place at the Table occupied by the family of Nations, but she has grown in stature. It is not to Canada's discredit that she has gained international recognition for herself in no way to a greater extent than she has done in the councils of the nations that are the International Labour Organization. I am tempted to borrow the apt illustration used by the Prime Minister recently in describing General Smuts' part in three decades of the history of the British Empire, and apply it to Canada's part in the I.L.O.: like Aeneas in Virgil's classical epic, Canada may truthfully say, in speaking of the history of the International Labour Organization, "Of these things I myself was an important part." Therefore, as a means of becoming better acquainted with Canada abroad, my advice is to study the International Labour Organization.

In the nineteenth century, the disadvantages of varying standards affecting the workers in the different world countries, workers who moved freely from one country to another and whose products competed with each other in a world market, led to a proposal to discuss the legal protection of labour from an international standpoint. In 1900, on the initiative of the Swiss Government, there was formed the International Association for Labour Legislation, with headquarters at Basle, Switzerland. Prior to 1914 conferences were held in Berne, Switzerland, in 1906, and in Lugano, Switzerland, in 1910, at the latter of which Canada was represented by the present Prime Minister, the Rt. Hon. W. L. Mackenzie King. Though the war interrupted the work of the association, a start in international governmental action on labour matters had been made, legislation had resulted in many countries, and the way to some more stable, more comprehensive machinery had been paved.

A second preparatory step toward international action on labour matters was the development of international trade union action. During the war trade unionists perceived that if peace were arrived at without account being taken of the harmful effects of unequal advancement in workers' standards in all countries, the very backwardness in labour legislation which bore so heavily on labour in some countries would be a contributing factor of no small consequence in producing further wars with further horrors for the world's working population. Accordingly, while the war was yet in progress, labour organizations in the leading countries endorsed the idea of calling an international labour conference before the beginning of the peace negotiations.

In tune with Labour's own attitude and based on the experience of the pre-war International Association for Labour Legislation, a commission known as the Commission of International Labour Legislation was appointed by the Peace Conference to draw up a plan for a permanent organization. The report of this commission formed the basis of Part XIII (Labour) of the Treaty of Peace with Germany and provided for the adoption of Labour Guarantees recognizing explicitly certain fundamental principles as necessary to social progress; and at the Fifth Plenary Session of the Peace Conference, held in the city of Paris, France, on April 19, 1919, Sir Robert Borden, then Premier of Canada, proposed the undermentioned amended text, which was unanimously adopted:—

"The High Contracting Parties, recognizing that the well being, physicial, moral, and intellectual, of industrial wage earners is of supreme international importance, have framed a permanent machinery associated with that of the League of Nations to further this great end.

"They recognize that differences of climate, habits and customs, of economic opportunity and industrial tradition, make strict uniformity in the conditions of labour difficult of immediate attainment. But, holding as they do that labour should not be regarded merely as an article of commerce, they think that there are methods and principles for regulating labour conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit.

"Among these methods and principles the following seem to the High Contracting Parties to be of special and urgent importance:

"*First.*—The guiding principle above enunciated, that labour should not be regarded merely as a commodity or article of commerce.

"*Second.*—The right of association for all lawful purposes by the employed as well as by the employers.

"*Third.*—The payment to the employed of a wage adequate to maintain a reasonable standard of life, as this is understood in their time and country.

"*Fourth.*—The adoption of an eight-hours' day or a 48-hours' week as the standard to be aimed at where it has not already been attained.

"*Fifth.*—The adoption of a weekly rest of at least 24 hours, which should include Sunday wherever practicable.

"*Sixth.*—The abolition of child labour and the imposition of such limitations on the labour of young persons as shall permit the continuation of their education and assure their proper physical development.

"*Seventh.*—The principle that men and women should receive equal remuneration for work of equal value.

"Eighth.—The standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein.

"*Ninth.*—Each state should make provision for a system of inspection, in which women should take part, in order to insure the enforcement of the laws and regulations for the protection of the employed.

"Without claiming that these methods and principles are either complete or final, the High Contracting Parties are of opinion that they are well fitted to guide the policy of the League of Nations; and that, if adopted by the industrial communities who are members of the League, and safeguarded in practice by an adequate system of such inspection, they will confer lasting benefits upon the wage-earners of the world."

The machinery of the International Labour Organization, as to its main divisions, might be likened to our own Government: we are familiar with a system providing for a Parliament, a Cabinet, a permanent Civil Service, and a judiciary. In the International Labour Organization we find an approximate counterpart to each of these branches. The International Labour Conference is the Parliament; the Governing Body is the Cabinet; the International Labour Office is the Civil Service; while the Court of International Justice fills the place of the judiciary.

(a) *International Labour Conference.*—The Parliament of the International Labour Organization, known as the International Conference, is composed of four representatives of each member state, two of whom are Government delegates while one represents employers and one employees. Each delegate is entitled to two technical advisers for each item on the agenda of a particular Conference, one of whom shall be a woman when questions specifically affecting women are to be considered. Non-Government delegates and their advisers are to be nominated by member states in agreement with the most representative organizations of employers and employees, respectively, if any such organizations exist. Provision is made for a meeting of the International Labour Conference at least once each year.

It is of special interest to Canada that provision is made for powers of a federal government. In the case of a federal state, the authority of which to enter into Conventions on labour matters is restricted, the federal government may treat a Draft Convention as a Recommendation only.

(b) *Governing Body.*—The Governing body, functioning as a sort of a Cabinet, is made up of twenty-four persons, twelve representing Governments, six representing employers, and

six representing workers. Article 393 of the Treaty of Peace provides that "of the twelve persons representing the Governments, eight shall be nominated by the members which are of chief industrial importance and four shall be nominated by the members selected for the purpose by the Government Delegates to the conference, excluding the Delegates of the eight members mentioned above. Any question as to which are the members of chief industrial importance shall be decided by the Council of the League of Nations." At first the Governments given representation because of their industrial importance were Belgium, France, Germany, Great Britain, Italy, Japan and Switzerland. Argentina, Canada, Denmark, Poland and Spain were given positions by election of the Assembly, it being understood that the United States, upon joining the League of Nations, would be given a place on the Governing Body by reason of her industrial importance, at which time Denmark would yield her position. Subsequent dissatisfaction with the ranking of countries as to industrial importance led to a new alignment placing Canada among the eight countries of chief industrial importance and thus giving her a permanent place on the Governing Body. This she has held since 1922.

In addition to being in control of the International Labour Office, the Governing Body has to discharge the important duty of preparing the agenda for the annual Conferences.

(c) *International Labour Office.*—As referred to above, the International Labour Office is really the civil service of the International Labour Organization. In the terms of Article 396 of the Treaty "the functions of the International Labour Office shall include the collection and distribution of information of all subjects relating to the international adjustment of conditions of industrial life and labour and particularly the examination of subjects which it is proposed to bring before the Conference with a view to the conclusion of international Conventions and the conduct of such special investigations as may be ordered by the Conference." In brief, the International Labour Office is a permanent secretariat for the I.L.O., carrying on all classes of its secretarial work. It is in charge of a Director, Mr. Albert Thomas, of France, and an Assistant Director, Mr. H. B. Butler, of Great Britain. While no quota is definitely assigned to the different countries in the matter of the selection of staff, it is provided that the members of the staff shall be drawn from nationals of the different member states. For convenience the Office is formed into four divisions: (1) The Cabinet, with the duty of keeping in touch with trade union movements throughout the world; (2) The Common Services, for purposes of internal administration of staff, accountancy, expenditure, etc.; (3) The Diplomatic Division, to deal with the League of Nations and to carry out the secretarial work incidental to the meetings; and (4) The Scientific Division, which handles matters requiring technical studies under Article 396 of the Treaty of Peace.

Like national labour departments, the International Labour Office issues publications from time to time dealing with labour matters. Perhaps the best known is the monthly *International Labour Review,* which gives a resume of the proceedings of the I.L.O., as well as scientific papers on economic subjects. All of the special studies issued by the office are extremely informative and needless to say authoritative.

(*d*) *Permanent Court of International Justice.*—Machinery is provided by the Treaty for securing the observance by the various states of Conventions which they have ratified. Complaints that any state "has failed to secure in any respect the effective observance within its jurisdiction of any Convention to which it is a party" may be made to the International Labour Office by any other state which is a party to the Convention or by any industrial association of employers or of workers or by any delegate to the Conference. The Governing Body of the International Labour Office is empowered to invite the state concerned to make such statement on the subject as it may think fit, and if no satisfactory reply is received, the complaint may be referred to a Commission of Inquiry which is to be appointed by the Secretary-General of the League of Nations from a standing panel of persons of industrial experience nominated by the member states, with no nominee of a member involved in a dispute to be on the Commission. Each state is required to nominate three persons for appointment to this standing panel, two representing employers and workers respectively and the third a person of independent standing. A Commission of Inquiry is to be composed of three persons, one from each group.

It is required that each Government shall inform the Secretary-General of the League of Nations whether or not it accepts the report of the Commission of Enquiry and, if not accepting the report, if it proposes to refer the complaint to the Permanent Court of International Justice of the League of Nations.

Under Article 416 of the Peace Treaty, in the event of any member state failing to take the action required by the Peace Treaty with regard to a Draft Convention or Recom-

mendation any other member state is entitled to refer the matter to the Permanent Court of International Justice whose decision with regard to such matters shall be final.

Accomplishments of the International Labour Organization constituting Ten Years of Constructive Co-operation between Governments, Employers and Workers.

The first meeting of the International Labour Conference was held in Washington, D.C., in October and November, 1919. At that time it was thought that the United States would become a member of the League of Nations and in consequence a member of the I.L.O., and with this in mind the Peace Conference had named the United States as one of the convenors of the first Conference. As the United States did not become a member of the League, she is not a member of the I.L.O. The second Conference was held at Genoa, Italy, in 1920. From that time to the present day practically the whole organized labour world has been co-operating through the International Labour Organization, not only with the governments of the world, but also with the organized employers. The story of that co-operation is told in the first ten years of the International Labour Organization, which celebrated its Tenth Anniversary on January 10, 1930. It is a story of conference and discussion, research and fact finding, in a word a mechanism set up by governments to deal with problems of industrial relations as they shape themselves in a community whose markets are world wide. The employers' interest in preventing unfair competition was likewise recognized. For the I.L.O. became an official body of governments, employers and workers to deal with the problems of labour and industry in a world economic community. As such a device the concrete record of achievement speaks for itself. First of all, the I.L.O. has lived and added to its membership. It started out with 24 signatory nations, and comprises at present 55 member countries. The organization has had thirteen conferences, more than one a year, since the first called in Washington in 1919. An average of forty nations have attended these conferences each year. The number of delegates and advisers in attendance have been on the average 250 or more.

Plans and suggestions which it has made for abolishing poor working conditions and improving industrial relations consist of 29 specific labour treaties and about the same number of more general recommendations, all dealing with such important matters as hours and pay, safety and health, employment of women and children, work of seamen and agricultural labourers, immigrants, etc., and the relation of all these matters to the cost of production and economic stability.

The member countries have honoured these treaties with four hundred ratifications. Twenty-three countries, for instance, have agreed to link up their public employment offices for the better distribution of employment and the continuous study of employment fluctuations. Eighteen countries have agreed not to employ children under fourteen years in industrial work; twenty-one not to employ young people under eighteen on night work in industry; other agreements relate to accident prevention, workmen's compensation, weekly rest, minimum wage measures, and broad inclusive insurance schemes.

All this contrasts most favourably with the pre-war situation. Between 1890 and 1910 the industrial countries of the world were able to agree on only two labour treaties and to secure for these two only twenty-five ratifications.

As a fact-finding institution, the I.L.O. is functioning even more broadly, though less obviously. It has told the story of the eight-hour day and made available the facts with regard to its spread and some of its effects. It has told the world the facts with regard to forced labour and the part that it plays in world economy. It has established on a sound footing the first comprehensive study and analysis of migration. The first steps have been taken by the I.L.O. to ascertain the facts for a comparison of real wages in different countries. Not only has it compiled and distributed currently important labour laws of the world, but has made special analysis of the workmen's compensation laws, laws on the employment of women and children, seamen's legislation, freedom of association and hours of work. Special studies and reports are issued on these and other subjects discussed at the conference or requested by groups faced with these problems.

Eight periodicals report currently on immediate aspects of these same problems, all appearing in English and French versions, and some in German, Italian and Spanish.

Special subsidiary conferences are additional instruments of the I.L.O., for dealing with special problems and maintaining collaboration with existing organizations. An example of this is the present advisory coal conference in session at Geneva for considering the question of hours and wages in coal-producing countries, coal mining being a depressed industry whose basic evils are admittedly international in their character.

The office staff that functions continually at Geneva at the headquarters of the I.L.O. consists of upward of 400 men and women recruited from 36 nations. Yet they do not represent those nations, but are an international civil service whose allegiance is, in a sense, international.

As an experiment in internationalism the I.L.O. is all that its sponsors hoped it would be. It remains only for the nations of the world to continue to give it in the future the support they have given it in the past in order to make this great agency for world peace the complete success that it deserves to be.

I should like to add just a word further regarding Canada's part before concluding. A list of the names of those who have attended the assemblies, as representatives of the Government, of employers and of employees would seem like a roster of the leading figures in each of these fields during the past eleven years. This shows that Canada has taken the International Labour Organization in the spirit in which it was intended by the drafters of the Treaty of Peace; that they have given to it of their best, so that it cannot fail from any cause on our part, for in the final analysis the I.L.O. is only a sort of tidal basin whose waters will rise no higher than the tide of events compel.

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] MARCH, 1930 [NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A SLIGHT increase was noted in industrial employment in Canada at the beginning of February, although the situation was still affected to some extent by inventory shutdowns, and also by continued seasonal slackness in the out-of-door industries, which were seriously retarded by the unusually cold weather prevailing at the beginning of the month, particularly in the western provinces. Employment, however, was in rather greater volume than on the same date in 1929, and considerably more active than on February 1 in earlier years of the record. This statement is based upon returns received by the Dominion Bureau of Statistics from 7,062 firms, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms on February 1 aggregated 971,774 persons, as compared with 967,996 on January 1. This increase, which was rather less extensive than on the corresponding date in the two preceding years, caused the index (average, 1926 =100) to stand at 111.6, while in the preceding month it was 111.2, and on February 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively. At the beginning of February, 1930, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 10.8, as compared with unemployment percentages of 11.4 at the beginning of January, and 6.3 at the beginning of February, 1929. The February percentage was based on the returns tabulated by the Department of Labour from an aggregate of 1,772 local unions, embracing a membership of 211,811 persons. Reports received from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in January when a comparison was made with the preceding month, but a gain over January a year ago, this comparison being reckoned from the average daily placements effected during the period under review. All groups except manufacturing, farming and trade recorded fewer placements than in December, while logging and construction and maintenance were responsible for the gains shown over January last year.

The average cost of a weekly family budget of twenty-nine staple foods was $11.83 at the beginning of February, as compared with $11.88 for January; $11.15 for February, 1929; $11.03 for February, 1928; $11.23 for February, 1927; $11.50 for February, 1926; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $16.92 for June, 1920 (the peak); $15.77 for February, 1920; $12.54 for February, 1918; and $7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 94·0 for February, as compared with 95·6 for January; 95·7 for February, 1929; 96·8 for February, 1928; 97·6 for February ,1927; and 102·2 for February, 1926.

Investigation Disputes Industrial Act.

During the month of February the Department received from employees of the Sydney and Louisburg Railway (Nova Scotia) an application for the establishment of a Board of Conciliation and Investigation under the Act. A Board was established during the month in connection with the application reported in the December issue as having been received from certain employees of the Hydro Electric System of Winnipeg. Information concerning recent proceedings under the Act is given on page 266.

Proposed public health units in Canada

The House of Commons, on March 3, adopted a motion "that in the opinion of this House, the government should take into consideration the advisability of making grants to the provinces equal to one-third the cost of establishing, and to cover permanently such full time health units as may be organized."

A "Health Unit" usually consists of a medical officer, a trained nurse and a sanitary inspector, with the equipment of a laboratory. The movement to establish health units throughout Canada has the support of the Dominion Council of Health, the Canadian Public Health Association and other public bodies. (LABOUR GAZETTE, April, 1929, page 400.) A note on this subject appeared in the LABOUR GAZETTE, August, 1929, page 846. The following resolution adopted at the last annual convention of the United Farm Women of Alberta was quoted in the House of Commons by the member who proposed the adoption of the motion quoted above:—

"Whereas, it is expedient that preventable disease and death in the rural areas of Canada be more efficiently controlled; and whereas, full time rural health units have been found effective for such purposes in certain provinces of Canada, and States of the United States of America; and whereas, under the present organization of such units the Rockefeller Foundation will bear for a period of only three years one-third of the cost of such units: Be it therefore resolved, that the federal government, through the Minister of National Health at Ottawa, be requested to provide a grant to the provinces of Canada, sufficient to cover permanently the one-third share of the cost of such rural health units."

Health insurance proposed in British Columbia.

At its session of 1929 the British Columbia Legislature appointed a committee composed of five members of the Legislature, to collect information concerning existing systems of health and maternity insurance, and to make recommendations as to the feasibility of establishing such a system in the Province (LABOUR GAZETTE, June, 1929, page 609). This committee submitted progress report in the Legislature in February this year. The committee reports that "Our investigations, thus far, convince us there is justification and a general demand for the introduction in British Columbia of an economically sound and equitable public health insurance plan in the interests of the majority of provincial wage earners, of provincial industries and of the state."

It is stated that should the Legislature act on the recommendations of its committee and create a system of sickness insurance, such legislation would be the first to be enacted on this continent. An outline of the committee's report will be given in a future issue of this GAZETTE.

Public health service in Alberta.

A proposal that the provincial government should consider instituting a system of state medicine and health insurance was rejected by the Alberta Legislature on February 24, the House adopting instead a resolution in the following terms:—

"After having due regard to the financial position of the Province the Government should continue its efforts to improve the public health service rendered the people of the Province, and that the Government should further in co-operation with other Provinces continue its study of health insurance, presenting the results of such inquiries to this Assembly."

Workmen's compensation in Ontario.

"After fifteen years' experience of the present Act it is believed few either of the workmen or the employers would desire to return to the old system." This statement is made at the conclusion of a pamphlet (Circular 2 January, 1930) recently published by the Ontario Workmen's Compensation Board giving a popular account of the provisions of the act. "The outstanding features of the present law," it is stated, "are the simplicity of its provisions and procedure, the elimination of litigation and expense, wide protection for workmen and their dependants, immunity of the employer from individual liability, and expeditious payment of benefits directly into the hands of the injured workman or his dependants." The scope of the compensation payable under the Act is stated as follows:—

Compensation is payable where there is personal injury by accident arising out of and in the course of the employment, and in the case of certain industrial diseases. The only exceptions are:—(1) Where the disability lasts less than seven days; (2) Where the accident is attributable solely to the serious and wilful misconduct of the workman and does not result in death or serious disablement. The question of negligence or absence of negligence of employer or workman does not affect the matter, and the old legal defences of common employment and voluntary assumption of risk are no longer applicable. No agreement to forego the benefits of the Act is valid; no contribution toward the benefits provided is to be collected from the workmen; and the compensation cannot be assigned, charged, or attached, except with the approval of the Board. The benefits provided are in lieu

of the right of action for damages at law and such actions cannot be prosecuted for matters covered by the Act.

Quebec Workmen's Compensation Act

The intentions of the Quebec Government in regard to the provincial Workmen's Compensation Act were stated by the Hon. A. Galipault, minister of Public Works and Labour, in the course of the interview in February between the Government and a delegation from the Trades and Labour Congress (LABOUR GAZETTE, February, page 182). It was conceded, he stated, that amendments were needed in the Act, and they would be made after it has been in operation for another year. Next year, he said, it was possible that an amendment would be introduced to provide for a collective liability system of insurance against accidents. The Minister said there had been many complaints from employers regarding the action of certain insurance companies in refusing insurance or charging prohibitive rates. The "hospitalization" of injured workmen presents one of the most urgent problems in administration, the high charges made by some of the doctors, Mr. Galipault pointed out, being a leading cause for complaint not only in Quebec but also in Ontario and other provinces.

The Minister further referred to the announcement already made in the Legislature in the opening speech from the Throne (LABOUR GAZETTE, January, page 3) that the government intended to name a commission during the present session to study existing systems of social insurance, and he anticipated that some of the questions raised by the delegation, including that of Old Age Pensions in the province, would be dealt with in the report of that commission.

Progress of old age pensions in United States

Considerable progress was made during 1929 in old age pension legislation in the United States. During the past year new State laws were enacted in California, Minnesota, Utah, and Wyoming, bringing up to ten the total number of state pension laws in existence at the present time. These ten states are are follows:—California, Colorado, Kentucky, Maryland, Montana, Nevada, Wisconsin, Wyoming, Minnesota, and Utah.

The first old age pension law in the United States was passed in Arizona in 1914, but was declared unconstitutional because the loose wording of the act left the meaning obscure. Pennsylvania passed an old age pension Act in 1923, which also was held unconstitutional on the ground that a provision in the State constitution prohibited legislation which made appropriations for charitable, benevolent and educational purposes. An Act passed in the State of Washington in 1926 was vetoed by the governor. Massachusetts in 1928 passed a unique act known as the "Public Bequest Law", which created a public bequest fund administered by the secretary State treasurer and the commissioner of State pensions. This fund is to be accumulated from private bequests, nothing being contributed by the State. Until this fund reaches a total of $500,000, it is not to be touched, but thereafter with the approval of the governor and council, the income from it may be used to provide aid to worthy citizens who, because of old age and need, require such assistance. To date, only an insignificant amount has been contributed to this fund.

Pension laws in the ten States named above follow generally similar lines. With the exception of California and Wisconsin, the State pays none of the cost of the pensions, their financing being left to the counties. Where effective, the laws provide that persons above a certain age who have been citizens of the State for a number of years and whose property or income does not exceed a stated amount, shall be entitled to a pension which, together with whatever private income they may receive, shall not exceed a fixed amount. In no case does this amount exceed a dollar a day.

Old Age Pensions in Canada.

The complete statistics of the administration of the Old Age Pensions Act for the last quarter of 1929 are not ready for publication in this issue, owing to the large increase in the number of pensioners resulting from the operation of the Act in the Province of Ontario. The last issue contained a table showing the expenditures during the fourth quarter, and also since the Act became effective, together with the amounts expended by the Dominion and by the several provinces that have so far entered the pension scheme. It is hoped that the next issue will contain full statistics, similar to those for the third quarter which were published in the issue for November, 1929.

Nova Scotia Minimum Wage Board Appointed.

In accordance with the forecast made recently by the Hon. E. N. Rhodes, premier of Nova Scotia (LABOUR GAZETTE, January, 1930, page 3) the provincial government on March 3 announced the appointment of a Board to administer the Minimum Wage for

Women Act. This Act was first enacted in 1920, and was proclaimed as being in force on May 1, 1924, no Board, however, being named until now. The members of the Board are as follows:—Mr. H. E. Mahon, LL.B., of Halifax, chairman; Mrs. Matthew Scanlon, Halifax; Mrs. P. M. Fielding, Windsor; Mr. P. J. Healy, Halifax; and Mr. Roderick Kerr, Glace Bay.

Injunctions in the Province of Quebec.

The Legislature of the Province of Quebec, in Committee on March 5, rejected a bill to amend the Code of Civil Procedure in reference to the provisions governing the issue of injunctions. The bill proposed to exempt disputes between employers and workers "unless on either side irreparable damage to property is threatened or done; and nothing shall be deemed property for this purpose which is not tangible and transferable."

Dominion's part in unemployment insurance.

Referring to the recent interview between a western delegation and the Dominion Government on the subject of unemployment insurance, the Prime Minister explained further the policy of the government on the question of unemployment insurance when replying in the House of Commons on February 27, to an inquiry addressed to him by Mr. Woodsworth. The member for Winnipeg North Centre asked whether, in view of the Prime Minister's statement to the western delegation on the previous day, the government would be willing to call a special conference so that this matter might be expedited. Mr. King answered as follows:—

"My recollection is that a special committee of this House considered this question last session and brought to the House a report to the effect that unemployment insurance was necessarily a matter with which provincial governments rather than the federal government would have to deal. I think I expressed the view yesterday that in my opinion a system of unemployment insurance would be a constructive way to deal with the unemployment problem, to which system not only the employer and the governments concerned would contribute, but the worker also. If the provinces make a move in this matter and it appears that the federal government can be of assistance in helping to bring about uniformity as between the provinces of any plan proposed, or can co-operate in other ways in any discussion on the subject, we shall be glad upon invitation to take the matter under consideration."

A statement by the Minister of Labour was noted in the last issue (page 106) to the effect that the Dominion Government was taking steps to ascertain the views of the provincial governments on the question of the establishment of a system of unemployment insurance. An account of the interview with the western delegation is given on another page of this issue.

Canadian employers and unemployment.

The Commerce of the Nation, the official organ of the Canadian Chamber of Commerce, described in its February issue the recent activities of that body in connection with unemployment in Canada as follows:—

"The Canadian Chamber has memoralized its member Boards and Chambers, asking them to assist in alleviating unemployment in Canadian communities. Throughout the Dominion there has been an encouraging response to this appeal and the local organizations are making splendid efforts to help the unemployed. In Winnipeg and Vancouver, definite action has been taken by the calling of conferences to discuss this situation. In each instance neighbour Boards, Chambers and municipalities have attended, as well as labour organizations and service clubs. There has never been, perhaps, as widespread an interest taken in the unemployment problem as this year, and it is reasonable to expect that efforts to find ways and means towards a solution will not be altogether unfruitful. It would seem that in future an earlier start might be made and plans more carefully laid against this periodic ailment in our economic life."

Baltimore and Ohio Railway agreement to stabilize employment

The management of the Baltimore and Ohio Railway and the executive board of Shop Craft System No. 30, assisted by B. M. Jewel, president, and O. S. Beyer, consulting engineer, of the Railway Employees' Department, American Federation of Labour, signed an agreement in February whereby regular employment as to be provided for all shop craft mechanics, helpers and apprentices. The number of employees who are provided for in the agreement is greater by 231 than the number actually in service at the date of the agreement. *Labour,* the weekly newspaper published by the A.F. of L., states that the working of the plan will be watched with interest by other industries and other railroads, inasmuch as lay-offs and furloughs are undoubtedly the worst evils confronting industry to-day. A similar plan, placed in effect by unions and management,

has been in operation for two years on a smaller railroad, the Seaboard Air Line.

Under the terms of the agreement the management will build up the present force by reinstating the passenger car repair men at Washington, Indiana, adding two freight car repair units, and by making some slight additions to roundhouse forces. Back shops, or heavy repair points, which have been shut down four days at the close of each month, will go back on the 44-hour week, thus making a definite gain of two work days a month. The agreement also makes provision for filling the day by day vacancies due to absence of regular employees. These places will be given to furloughed employees who hold themselves available for call, the number to be regulated by local committees and management, so that such men will get at least three days' work a week. It is estimated that from 1,200 to 1,500 men will be employed in this way, making a total of 12,950 on the rolls.

President W. J. McGee, in a letter addressed to the members of the System Federation, appealed to them to do all in their power to (1) reduce overtime, (2) save material, (3) get business, (4) consider the desirability of continuing the 44-hour week at least during the summer months and advise the secretary of the federation in this regard.

Prior to June 1, 1930, a conference will be held to determine what amendments, if any, may be necessary to cover the balance of the year. The System Federation convention to be held in May will consider the progress of the plan at that date.

Economic Advisory Council in Great Britain

The Right Hon. J. R. MacDonald, Prime Minister, announced in the British House of Commons on January 22, that the government has decided to set up a permanent Economic Advisory Council. The purpose of the new body is to advise the government in economic matters, and to make continuous study of developments in trade and industry and in the use of national and imperial resources, of the effect of legislation and fiscal policy at home and abroad, and of all aspects of national, imperial and international economy with a bearing on the prosperity of the country.

The Council will be subject to the general directions of the Prime Minister. It will take over and expand the functions of the existing Committee of Civil Research. It will keep in close touch with the departments affected by its work with a view to the concerted study of economic problems of national interest, but it will interfere in no way with the functions or responsibilities of ministers or of the departments over which they preside, and it will have no administrative or executive powers.

The Chairman of the Council will be the Prime Minister, and the other members will be, the Chancellor of the Exchequer, the Lord Privy Seal (while the present duties are attached to that office), the President of the Board of Trade, the Minister of Agriculture and Fisheries, such other ministers as the Prime Minister may from time to time summon, and such other persons chosen by the Prime Minister in virtue of their special knowledge and experience in industry and economics. The Council will meet when summoned by the chairman, and as regularly as is found possible. The chairman may appoint standing committees and also such committees for special purposes as may be required.

In reply to a question in the House of Commons on February 12, the Prime Minister gave the following further information with regard to the membership and staff of the Council:—

"The following have consented to serve as members of Economic Advisory Council:—Sir Arthur Balfour, Mr. Ernest Bevan, Mr. W. R. Blair, Sir John Cadman, Mr. W. M. Citrine, Mr. G. D. H. Cole, Mr. Ernest Debenham, Sir Andrew Duncan, Sir Daniel Hall, Sir William Hardy, Mr. J. M. Keynes, Sir Alfred Lewis, Sir William McLintock, Sir Josiah Stamp, Mr. R. H. Tawney."

Unemployment measures in United States Senate

The Hon. Senator Wagner introduced in the United States Senate in February three measures designed to relieve the unemployment situation. The first would establish a Federal Employment Stabilization Board composed of the Secretaries of the Treasury, Commerce, Agriculture and Labour. This Board would study the indices of building construction and employment and "advise the President from time to time of the trend of employment and business activity and of the existence or approach of periods of business depression and unemployment in the United States or in any substantial portion thereof." Whenever, upon recommendation of the Board, the President finds there exists or within the six months next following there is likely to exist, such a period of business depression or unemployment he is requested to transmit to Congress by special message supplemental estimates for emergency appropriations to be expended upon public works in the area of depression "in order to prevent unemployment and permit the Government to avail itself of the opportunity for

speedy, efficient, and economical construction during any such period."

The second bill would establish a national system of public employment offices. The bill would create the United States Employment Service as a separate bureau in the Department of Labour under a director general to be appointed by the President, by and with the consent of the Senate.

The third bill would provide for an amendment to the Act creating the Department of Labour, and directs the Bureau of Labour Statistics to "collect, collate, report, and publish at least once each month full and complete statistics of the volume of and changes in employment as indicated by the number of persons employed, the total wages paid, and the total hours of employment, in the following industries and their principal branches: (1) Manufacturing; (2) mining, quarrying, and crude petroleum production; (3) building construction; (4) agriculture and lumbering; (5) transportation and communication; (6) the retail and wholesale trades; and such other industries as the Secretary of Labour may deem it in the public interest to include."

English company's provisions for its unemployed workers

Mr. B. S. Rowntree, of the firm of Rowntree and Company, Limited, of York, England, in a lecture delivered recently at Oxford, described the measures taken by his firm to provide for employees who have been laid off. In 1920 the directors of the company set aside a sum of £10,000 ($48,665) per year, or 1 per cent of the wages bill, whichever was the greater, in order to provide benefits supplementary to those given under the State scheme. In the case of persons dismissed, benefits are paid by the company, which, together with the State benefit and any payment from a trade union, amount to 50 per cent of the average earnings of the unemployed person. Additional benefit is given for a dependent wife and for each of not more than three children under 16 years of age up to a maximum of 75 per cent of the average wage. These benefits are payable for a period proportionate to service. Workers laid off on short time receive benefit at the rate of 80 per cent of what men and women dismissed receive. The annual charge to the company for this assistance has only in one instance reached the maximum of £10,000 named in the scheme.

In 1924, owing to reorganizations, reduction of the force became necessary, and the company helped the dismissed men to get a fresh start. Provision was made for paying over in a capital sum to those dismissed an amount not to exceed 75 per cent of what might be due them as unemployment pay, together with a dismissal gratuity at the rate of one week's salary for each year of continuous service over five years. In addition, a number of employees of the company were appointed to aid in such matters as purchasing, advertising, and keeping stock. This aid has been continued, and is used as supplementary to all other plans adopted.

In 1928 when a rather larger number than usual had to be laid off owing to improvements and reorganizations, the company, finding that the labour market in York could not absorb any further surplus labour, tried to secure positions for the workers elsewhere in England, undertaking to pay employers who would take them £2 ($9.73) a week for one year, as a contribution toward the cost of training them for new work.

Mr. Rowntree described the special efforts made by the company to cope with unemployment in 1929. Soon after the beginning of 1929, he said, it became evident that it would be necessary to dispense with the services of further men. It was undesirable to withdraw these men from York in any large numbers. Further, it was less economical to make a payment out of revenue than to make a capital investment. Following the principle that the only real remedy for unemployment is to find other work, the directors decided to invest capital in fresh industries in York. They realized that the line of development where one industry was needing fewer workers was to inaugurate other industries which were likely to increase in strength and in their demands for labour.

Altogether three small factories have been started in York. Rowntree & Co. (Ltd.) owned a factory which had been bought during the war as a warehouse and was standing empty. This has been so adapted that three small factories can be conducted in it, and it was expected that altogether 60 men would be employed by these concerns by the end of the year. This number Mr. Rowntree said will increase considerably in time, and with increased sales effort will be made to pay higher and higher wages.

Unemployment in sample cities in United States

The results of two unemployment surveys were given in the February issue of the *Monthly Labour Review*, published by the United States Department of Labour. A study among 58,866 wage earners in Philadelphia in April, 1929, showed that 7·8 per cent were idle because of inability to obtain work, while an additional 2·6 per cent were idle on account of sickness or from

other causes. The persons covered by the study were selected as a representative cross section of the population of the city. It was found that the percentage of unemployment varied greatly among different groups. One-half of the 102 industrial blocks had more than 11·5 per cent of unemployment among their workers, while in blocks in which the professional occupations predominated the corresponding percentage was 1·8. A similar survey of unemployment in Buffalo, N.Y., in November, 1929, covered 15,164 persons. Of this number, 821, or 5·4 per cent, were totally unemployed because of inability to find work, while the total number of unemployed from all causes combined was 1,509 and in addition 981 persons had only part-time work. Thus, of the whole group, 16·4 per cent were either idle or partly employed.

A committee of the Philadelphia Chamber of Commerce recently drew up a program for steadying employment and decreasing of unemployment in the city. The program contained the following recommendations:—(1) An institute for regularization of employment; (2) improvement of the system of bringing jobs and workers together; (3) a prosperity reserve of public work; (4) vocational training and vocational guidance in the public schools; (5) understanding the facts; (6) appointment by the chamber of commerce of a standing committee of five to seven to combat unemployment.

Education of children of ex-service men in Alberta

The Alberta Legislature adopted the following resolution on February 18:—"That the Government do appoint a committee representative of all parties in this Assembly to investigate the question of the granting of assistance towards cost of the secondary education of the children of deceased and disabled ex-service men and thereafter during the present session make a recommendation to this Assembly."

Apprentices in Canadian National Railways

The claim that "no railroad in North America can approach the record of the Canadian National Railways in retaining in its employ so large a number of apprentices following their period of probation," was made by Mr. A. H. Eager, general superintendent of motive power and car equipment of the Western Region of the company, in presenting certificates to thirty-two graduating apprentices at the eighth annual banquet of the Winnipeg apprentices of the company in the Fort Garry Hotel on March 1. Eighty-five per cent of the boys who graduate from the apprentice schools of the Canadian National Railways, he said, are to be found among the craftsmen employed in the shops of the company. He maintained that this was a condition which no other transportation company can rival, stating that there was a growing appreciation of the value of this training, which is educational as well as mechanical. He expressed the hope that the young men who passed out of these schools would avail themselves of the larger educational facilities which the company offered through its night schools and other facilities. In doing so they would fit themselves for the higher opportunities that are always available in a large corporation for those who have prepared themselves to accept them. He hoped that many of those graduating this year would eventually find themselves occupied not only in the shops, but in some of the many executive positions of the company.

Mr. A. A. Tisdale, general manager of the Western Region, said that the executive recognized the value of the apprentice schools and was giving them its fullest support. One of their staunchest supporters is the president, Sir Henry Thornton, who regards the apprentice schools of the system as among the finest elementary schools of railroading on the Continent. The value of these schools, he said, was also evident in the high type of young men they were attracting. He pointed out that the highest offices within the service are within the reach of every young man who applies himself and the opportunities for success greater in no industry than in that of railroading.

More than four hundred people were present at the banquet, which was under the chairmanship of one of the apprentices, E. J. Whiteway.

Duties of a Vocational Guidance Director

The following description of the duties and problems of a guidance director is given by Mr. Fintz, assistant supervisor of manual arts, Board of Education, Cleveland, Ohio, in an article appearing in the February issue of the *Industrial Education Magazine*. In a large high school, he said, a guidance director should be one of the most valuable and indispensable members of the principal's staff. The duties of this office are manifold, and the guidance program should have a prominent part in the organization. The person responsible for this task should be permitted or required to formulate a program that will reach into every room in the build-

ing. The importance of this position is based upon the fact that it forms the connecting link between the school and the ultimate job. The duties of the guidance director, under the leadership of a progressive principal, include:—

(1) Classification of available occupations in the community;

(2) Analysis of physical and mental requirements of jobs;

(3) Study of possibilities for advancement;

(4) Securing information in regard to working conditions in the various occupations.

(5) Understanding of social requirements—How juvenile workers can best meet their new period of social, civic and economic adjustment.

(6) Placement and follow-up.

Guidance should have its beginning not later than the second year in the junior high school, and should continue through the high school. Because of this early beginning, the problem becomes complex. The boys and girls neither understand themselves nor are they understood by others. Therefore, guidance and training are especially needed.

The United States *Monthly Labor Review*, February, 1930, contains an account of the growth of the movement to provide for insurance and old-age pensions by means of collective agreements. The first known example of action by trade unions to secure the protection of life and sickness insurance for their members was an agreement between a street railway company and its employees in 1926. Several street railway companies have since concluded such agreements and copies of recent agreements received by the bureau show a further extension of the movement. Electrical workers' agreements in two cities provide for life insurance of $3,000 per man, $30 per month for total disability, and $40 per month pension after the age of 65 years, to be paid for by the industry. Street-railway employees in one city are provided with life insurance of $1,000 and a monthly pension of $58 if they have had 20 years' service with the company upon reaching the age of 65.

During the month of February a total of 5,271 accidents were reported to the Workmen's Compensation Board of Ontario in the industries in Schedule 1 of the Act, 24 of which were fatal cases; in Schedule 2 industries 400 accidents were reported, including 3 fatal cases; 310 Crown cases, 4 of which were fatal, were also reported during the month, making in all 5,981, of which 31 were fatal.

The United States Bureau of Labor Statistics has published the results of a study of earnings and hours of labour in 1929 in foundries and machine shops. The average hourly earnings throughout the country in foundries were 62.4 cents and in machine shops 63.8 cents, and the average full-time hours per week were 51 in foundries and 50.3 in machine shops. Compared with 1927, the date of the last previous survey, average earnings per hour show no increase in foundries, but an increase of 1.3 cents in machine shops, while average full-time weekly hours decreased slightly in foundries and increased slightly in machine shops.

The United States Public Health Service co-operates with the other public departments and also with certain non-official agencies by supplying the medical service required in their work. For example, it assists the U.S. Employers' Compensation Commission in the hospital and out-patient treatment of disabled Federal employees; in physical examinations and special investigations, by the appointment of a permanent board of medical officers for disputed and difficult claims; by medical assistance in carrying out the longshoremen's and harbour workers' compensation Act and the District of Columbia workmen's compensation Act, by giving advice in regard to medical problems connected with compensation and hospital and out-patient treatment of injured Federal employees.

Trade Union Membership in United States

Trade-union membership in the United States was somewhat smaller in 1929 than in 1926 according to a summary of the latest edition of the Handbook of American Trade-Unions published by the United States Bureau of Labor Statistics. Unions in the American Federation of Labor, however, report an increase of 126,430 over the figure for 1926. The aggregate membership of all trade unions both within and without the American Federation of Labor, in 1929, was 4,331,251. Since 1926 ten national organizations have passed out of existence, but most of these were small dual organizations which have been absorbed by larger bodies, and during the same period three new dual organizations have developed in different fields. The greatest increases in membership are reported in the construction industry and in public service.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of February was reported by superintendents of the Employment Service of Canada to be as follows:—

Large catches of fish were reported from the Province of Nova Scotia, and this industry seemed to be fairly busy. Operators in the pulpwood cutting industry report large outputs, but log hauling, which was good during most of the winter, was being interfered with by mild weather. Building and construction seemed to be quite active for the winter time at Halifax, though somewhat quiet elsewhere. Coal mining continued to show normal winter production. Manufacturing was reported as normal, with the iron and steel industries showing a fair amount of business. Rail transportation showed some improvement, while trade was seasonally good. The usual number of women domestic workers were being placed.

Good catches were likewise reported by the fishing industry in the Province of New Brunswick. Logging in this province was rapidly drawing to a close and camps were beginning to break up. Some construction work was being carried on at the different centres, and in fact the volume of work appeared to be quite heavy for the season. Manufacturing was normally busy, without any outstanding fluctuations reported. Transportation and trade were both stated to be fair. Some women domestic workers were being placed.

Quebec employment offices reported orders for farm hands as beginning to come in. While very few orders for bushmen were being received by the offices in this province, one office in the northern section reported a shortage in the number of applicants. Operations on a large scale were expected in the mining districts shortly though at the moment conditions were quiet. Changes in manufacturing were not material though a slight revival in the boot and shoe industry and in the rubber industry was reported: textiles were stated to be busy. Orders were beginning to come into the offices for building labourers, and quite a volume of civic construction work was in progress throughout the province. Trade was rather dull. Applicants exceeded vacancies in the women's domestic sections.

Spring farm orders were becoming more noticeable in the Ontario employment offices. While practically every office in this province reported a surplus of building and construction workers, quite a substantial volume of work appeared to be under way in the different centres. Fluctuations both up and down in the manufacturing industries were reported at different centres, but none of them were outstanding and conditions remained practically normal. With the cutting season almost finished, vacancies for logging workers were not numerous although a few were being placed. While the mining industry was not engaging many additional workers, substantial activity in this line was again reported as proceeding. The normal situation as regards women domestic workers seemed at least temporarily reversed, in view of the fact that at most offices applicants either equalled or exceeded vacancies.

Requirements for farm hands in Manitoba were not at all numerous and plenty of applicants were readily available for all jobs coming to hand. Winnipeg reported that there was no evidence of new building operations starting as yet although some work was being carried forward, while other centres reported a small amount of work proceeding. The mining section of the province continued fairly busy, with nothing outstanding to report. The approaching close of the logging season occasioned a decline in the number of logging orders registered. Casual work for labourers was rather quiet apart from civic work being carried on. The women's domestic sections reported relatively few orders being received.

In Saskatchewan the number of vacancies for farm hands being registered showed an increase. Some small railway construction projects were under way in this province. Building construction under way was normally slack in the winter season, except in the case of civic work being carried on for relief purposes. Demands for women domestics were not particularly numerous. Generally speaking the employment situation throughout the Province of Saskatchewan was quiet.

Applicants for farm work were rather numerous in Alberta by comparison with vacancies registered. Building and construction were fairly active for the winter season, particularly in the larger centres. Although colder weather caused a temporary improvement in the coal mining situation, it was not anticipated that things would pick up much in this line during the balance of the winter. Although the vacancies were of a short duration Alberta offices were notified of a fair number of logging positions. Generally speaking conditions throughout the province seemed to show some im-

provement, although more than sufficient applicants were available to take any work offering.

Some improvement was reported in the logging industry in the different localities of British Columbia, and a few placements were being made. Mining districts reported about normal operations. As might be expected at this time of year, construction in most districts was fairly quiet. Manufacturing industries showed somewhat brighter prospects for the future though this condition was not

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

yet reflected in an increased number of orders. The employment situation as affecting general labour did not show any particular improvement, and quite a number were seeking work of this description.

Employers' Reports.

Though still affected to some extent by inventory shut-downs, and more so by continued seasonal slackness in the out-of-door industries, employment showed a slight increase at the beginning of February. The Dominion Bureau of Statistics tabulated returns from 7,062 firms, whose staffs aggregated 971,774 persons, as compared with 967,996 on January 1. Reflecting this advance, the index (average 1926=100) stood at 111.6 at the beginning of February, while in the preceding month it was 111.2 and on February 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 110.5, 102.0, 96.6, 91.8, 87.1, 91.7, 90.6, 79.9 and 91.2, respectively.

Reductions were recorded in the Maritime and Prairie Provinces, while elsewhere the tendency was upward. In the Maritime Provinces, construction, transportation and trade reported a falling-off, while mining and manufacturing were brisker. In Quebec, manufacturing, especially of iron and steel, textiles, lumber and electrical apparatus showed much improvement, as did also logging. On the other hand, transportation, construction and trade recorded pronounced seasonal curtailment. In Ontario, important gains were made in manufacturing, notably in the iron and steel, textile, lumber, non-ferrous metal, leather and tobacco, distilled and malt liquor divisions. Services also reported heightened activity, while there were seasonal reductions in trade and construction, and logging and transportation also released employees. In the Prairie Provinces, manufacturing, mining and logging were more active, but shrinkage was recorded in trade, construction, transportation and communications. In British Columbia, there was recovery in manufacturing, logging, communications and construction, while transportation was slacker.

The trend of employment was upward in Montreal, Windsor and the adjacent Border Cities and Vancouver, while Quebec, Toronto, Ottawa, Hamilton and Winnipeg showed reductions. In Montreal, manufactures registered substantial recovery, especially in the iron and steel, tobacco, textile and electrical apparatus groups, but there were marked seasonal losses in transportation, trade and construction. In Quebec, manufactures reported curtailment, and trade and construction were seasonally slacker. In Toronto, heavy seasonal decreases took place in trade, construction and transportation, but there were important gains in manufacturing, notably in textiles and iron and steel. In Ottawa, manufacturing was brisker, especially in the pulp, and paper division, while trade, transportation and communications were seasonally quiet. In Hamilton, employment showed a further falling-off, mainly in trade and construction. In Windsor and the adjacent Border Cities, important recovery was indicated, chiefly in automobile plants. In Winnipeg, the number employed showed a contraction, mainly in trade and communications, while manufactures were somewhat busier. In Vancouver, the manufacturing industries reported considerable recovery, and construction was also brisker.

An analysis of the return by industries shows marked improvement in manufacturing, notably in the iron and steel, textile, lumber, leather, non-ferrous metal and tobacco divisions, while there were losses in animal food, pulp and paper, musical instrument and building material factories. Logging and mining also showed improvement, but activity declined in communications, transportation, construction and maintenance and trade, the losses in the last named being extensive, as is usual following the activity of the Christmas and holiday season.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1930.

Trade Union Reports.

The local trade union situation showed slight change only during January from the previous month, the 1,772 labour organizations from which returns were tabulated, with 211,811 members, indicating 10.8 per cent of idleness compared with 11.4 per cent at the end of December. Less favourable conditions, however, prevailed than in January, 1929, when 6.3 per cent of the members reported were unemployed. In comparing with the returns for December, Quebec unions reported the most noteworthy expansion during the month under review, the garment trades of the province showing considerable recovery from the depression which has existed for several months. The Prairie Provinces also reported some employment advance, improvement on a moderate scale being recorded in railway operation and car shops which have shown considerable curtailment of employment for some time due to the reduced movement of grain. In Ontario the situation remained practically unchanged, while Nova Scotia, New

Brunswick and British Columbia unions reflected slight reductions in the employment volume available. With the exception of Manitoba all provinces participated in the downward employment trend shown in comparison with January, 1929, while the improvement indicated in that province was slight.

A more detailed report on unemployment at the close of January, as indicated by local trade unions, appears on another page of this issue.

EMPLOYMENT OFFICE REPORTS.

Reports of the Employment Service of Canada for the month of January, 1930, showed 27,318 references of persons to positions, and a total of 25,929 placements. Of these the placements in regular employment were 15,350, of which 11,904 were of men and 3,446 of women, while placements in casual work were 10,579. Vacancies offered by employers to the Service numbered 27,365, and of these 19,548 were for men and 7,817 for women, while applications for employment were registered from 31,592 men and 12,198 women, a total of 43,790. A decline was shown in vacancies and placements when the above figures were compared with those of the preceding month, while applications showed a nominal increase. Gains were, however, recorded in all transactions when a comparison was made with January last year, the reports for December, 1929, showing 28,762 vacancies offered, 42,695 applications made, and 27,811 placements effected, while in January, 1929, there were recorded 24,865 vacancies, 38,328 applications for work, and 22,800 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1930, will be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during January, 1930, was $7,189,741, as compared with $15,585,992 in the preceding month, and with $8,416,880 in January a year ago.

The *Maclean Building Review* states that the contracts awarded for February totalled $28,464,400. This figure is ·1 per cent ahead of February last year which was hitherto the largest February total on record. Of the February 1930 total, $14,042,400 was for engineering purposes; $9,587,400 was for business buildings; $3,848,200 was for residential buildings; $986,400 was for industrial purposes. The apportionment of the contracts awarded during February by provinces was as follows: Ontario, $14,099,200; Quebec, $8,662,400; British Columbia, $1,725,800; Nova Scotia, $1,485,000; New Brunswick, $974,700; Alberta, $878,300; Manitoba, $508,600; Saskatchewan, $105,400; Prince Edward Island, $25,000.

Production and Trade

INDUSTRIAL PRODUCTION.

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 262.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that industrial production made moderate recovery in January after the sharp reaction in the last quarter of 1929. After adjustment for seasonal tendencies, manufacturing, mining and construction were more active in the month under review. Curtailment was observed in the output of newsprint, while the exports of lumber indicated expansion in demand from external markets. Marked gains were shown in the output of steel, and the production of pig iron was substantially greater. The increase in the production of automobiles over December, after adjustment for seasonal tendencies, was 88 per cent. Production is normally only slightly greatly in January than in December, while 10,388 units were produced in the first month of the year compared with 5,495 units in December. The imports of petroleum and rubber were also much greater in January than in the preceding month, adjustments being made for seasonal tendencies. The index of manufacturing production summarizing conditions in the major industries, was 151·3 in the month under review, compared with 148·3 in December.

The index of mineral production shows that further expansion was made in January, though the precious metals were produced in lesser volume. The exports of copper and nickel indicate greater activity along these lines. Coal production was 1,630,000 tons, compared with 1,488,000 tons in December. The output of electric energy was 1,545,451,000 k.w.h., representing a gain, after seasonal adjustment, of 14 per cent over the preceding month.

EXTERNAL TRADE.

A summary of Canadian trade prepared by the Department of National Revenue shows that in January, 1930, the merchandise entered for consumption amounted to $84,910,377 as compared with

$84,365,155 in the preceding month and with $96,958,301 in January, 1930. The chief imports in January, 1930, were: Iron and its products, $18,436,134; Fibres, textiles and textile products, $15,251,124; Non-metallic minerals and products, $13,531,988.

The domestic merchandise exported during January, 1930, amounted to $73,507,327 as compared with $88,520,355 in December, 1929 and with $94,942,041 in January, 1929. The chief imports in January, 1930 were: Wood, wood products and paper, $22,046,284; non-ferrous metals and their products, $14,873,020; Agricultural and vegetable products, mainly foods, $12,926,450.

Strikes and Lockouts

The time loss due to industrial disputes in February, 1930, was almost twice as great as that occurring in January, 1930, a strike of women's clothing factory workers at Hamilton involving over 1,500 workers accounting for the greater part of the increase. As compared with February, 1929, the figures for February, 1930, show that, while fewer strikes occurred and less time loss was shown, the number of workers involved was over twice as large as in the same month last year. There were in existence during the month five disputes, involving 2,952 workers and resulting in a time loss of 13,840 working days, as compared with four disputes involving 1,949 workers and resulting in a time loss of 7,610 working days during January. In February, 1929, there were on record six disputes, involving 1,218 workers and resulting in a time loss of 21,760 working days. At the end of the month there were no disputes recorded as strikes or lockouts. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was slightly lower at $11.83 for February, as compared with $11.88 for January; $11.15 for February, 1929; $11.03 for February, 1928; $11.23 for February, 1927; $11.50 for February, 1926; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $16.92 for June, 1920 (the peak); $15.77 for February, 1920; $12.54 for February, 1918; and $7.75 for February, 1914. The most important declines were seasonal decreases in the prices of eggs and butter, while less important declines occurred in the prices of cheese, flour, beans, evaporated apples, sugar and coffee. The prices of beef, mutton, fresh and salt pork, bacon and potatoes were higher. Including the cost of fuel and rent with that of foods the total budget averaged $22.12 at the beginning of February, as compared with $22.17 for January, $21.41 for February, 1929; $21.25 for February, 1928; $21.46 for February, 1927; $21.87 for February, 1926; $21.19 for February, 1925; $21.18 for February, 1924; $21.17 for February, 1923; $21.07 for February, 1922; $24.85 for February, 1921; $26.92 for July, 1920 (the peak); $24.71 for February, 1920; $19.80 for February, 1918; and $14.54 for February, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 94.0 for February, as compared with 95.6 for January; 95.7 for February, 1929; 96.8 for February, 1928; 97.6 for February, 1927; and 102.2 for February, 1926. In the grouping according to chief component materials all of the eight main groups were lower, the Vegetables and Vegetables Products group, because of lower prices for grains, milled products and tea; the Animals and their Products group, due to lower prices for furs, butter and fresh eggs, which more than offset higher prices for hogs; the Textile and Textile Products group, due mainly to lower prices for cotton, raw wool, hemp and sisal; the Wood, Wood Products and Paper group, because of declines in the prices of cedar shingles, hemlock lumber and ground wood pulp; the Iron and its Products group, due to lower prices for steel sheets; the Non-Ferrous Metals and their Products group, because of lower quotations for lead, silver, tin and zinc; the Non-Metallic Minerals and their Products, due to declines in the prices of coal, sand and gravel; and the Chemicals and Allied Products group, due to lower prices for shellac.

The United States Bureau of Labour Statistics has published in its Safety Code Series, No. 509, the "textile safety code", sponsored by the National Safety Council. The code was formulated by the Textile Safety Code Committee. This is a committee of the American Standards Association, a national body organized to promote the development of industrial standards and codes for adoption and enforcement by States and for voluntary adoption by individual industrial concerns.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF FEBRUARY, 1930

DURING the month of February an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour from employees of the Sydney and Louisburg Railway, a subsidiary of the British Empire Steel Corporation. Ninety-one employees were stated to be directly affected by the dispute, the classes involved being freight handlers, baggagemen, trackmen and clerks, members of the Canadian Brotherhood of Railway Employees. The dispute grew out of the employees request for increased wages and minor changes in working conditions. The application was receiving consideration at the close of the month.

An application for the establishment of a Board of Conciliation and Investigation was reported in the December issue of the LABOUR GAZETTE as having been received from linemen, cablemen, station operators, assistant operators, lamp trimmers, maintenance men, electricians, electricians' helpers and assistants, steam engineers, chauffeurs, steam main service men, and other mechanics, employed by the Hydro-Electric System of the city of Winnipeg, and being members of the Hydro and Mechanical Workers' Unit and Pointe du Bois Unit of the Federation of Civic Employees of Winnipeg. The employees' request for increased wages was stated in the application as being the cause of the dispute, two hundred and twenty-five men being directly affected. A Board of Conciliation and Investigation was established in this case by the Minister of Labour during February, composed as follows: Mr. W. M. Neal, general manager, Western Lines of Canadian Pacific Railway Company, Winnipeg, chairman, appointed on the joint recommendation of the other Board members, Messrs. Wm. G. Chace and Harry Stephenson, both of Winnipeg, nominees of the city and employees respectively.

ALBERTA LABOUR DISPUTES ACT, 1926

Report of the Board in dispute between Calgary Garage Dealers' Association and Local Motor Mechanics' Union

THE report of a Board of Conciliation and Investigation appointed under the Labour Disputes Act in 1928 in connection with a dispute between Local Union No. 1006, International Association of Machinists, Calgary, and the Calgary Automobile Dealers' Association, was reprinted in the LABOUR GAZETTE, September, 1928, page 952. Another dispute having arisen in 1929, a Board was appointed, the chairman, Mr. Leonard W. Brockington, and the men's representative, Mr. A. Davison, being the same as in 1928. In 1929, however, the Employers' Association refused to appoint a representative on the Board, or to take any official cognizance of the proceedings. The Provincial Government finally appointed Mr. H. A. Howard, as a representative on the Board, to represent the point of view of the employers; and the Board, under the authority vested in it by the Labour Disputes Act, 1926, issued subpoenas upon certain designated members of the Garage Dealers' Association in an endeavour, by evidence or otherwise, to have the point of view of the employer adequately represented in the inquiry.

The Report of the Board, after an introduction referring to the efforts made to arrive at a solution of a "most difficult problem," proceeds as follows:—

"The spirit of co-operation and good will which distinguished the former proceedings have, unfortunately, been absent from the present proceedings. On the former occasion, both parties (without, it is true, bringing into issue one of the major questions involved, namely, the recognition of a union) agreed to accept what was an unanimous decision of the Board. Our difficulties have on the present occasion been increased throughout by the refusal of the employers (no doubt within their rights) to take any part in the proceedings, and by the ever-present danger that the Board itself could not agree on any findings satisfactory to the majority of its members. The present finding, from which the representative of the employers dissents, is in the nature of a compromise. The representative of the employees has made what he considers considerable sacrifices, and the Chairman of the Board, with considerable hesitation on some points, particularly on the question of wages and working conditions incidental thereto, but with no hesitation on the question of the recognition of a Union, and the

consequent institution of a system of apprenticeship, has agreed with the finding of the men's representative in order that some concrete answers may be promulgated to the difficult questions involved. At the outset, it is well to point out that automobile business in the city of Calgary, or elsewhere suffers, in our opinion, both from the employers' point of view and from the employees' point of view, from a surprising lack of organization and co-operation. This is no doubt mainly due to the nature of the business, to its sudden and phenomenal growth, and to the economic structure in which the "used car" is playing an important, and in some respects a disastrous part. The Garage Dealers' Association is a somewhat haphazard organization in which certain proprietors, by no means all, of garages in the city of Calgary occasionally meet together for some mutually advantageous and educational purpose. Conditions in various garages vary with the make of car sold or repaired, and the nature of the work done. Some organizations are large and complex, others are purely personal businesses of an individual employing a few men. Many Calgary garages are not included in the association at all. All these facts make organization and a settlement of individual disputes difficult. The business also involves intimate personal contact with the public.

"The Board has been swayed throughout by a desire to promote the welfare of the business in general, and to safeguard the interests of the public, who depend so much and to an ever increasing degree upon the efficiency of both the employer and employee. The majority of the Board believe that efficiency and that welfare will not be impaired by the frank recognition of the men's organization, which, while it is no doubt prompted in the first instance by a desire to stabilize and improve wages and working conditions, does promise, and, in our opinion, will effect, a considerable improvement in the technical and educational experience, equipment, and efficiency of its members. In arriving at this conclusion we are not in favour of a closed shop, nor are we unmindful of the very natural attitude taken by many of the garage proprietors, who, by dint of hard work and business acumen, have raised themselves from the position of employee to that of employer. The fears expressed by some of the employer-witnesses, as to sympathetic strikes and coercion, we believe to be unfounded. There is no doubt that the occupation of the motor-mechanic is exposed to some health hazards which the nature of the business entails, but which the good will and the efforts of the employer are doing everything possible to minimize.

"The ratio of unemployment to employment must, of course, vary in accordance with general business conditions; the particular business of the employing garage; weather conditions; and other matters beyond the control of the individual. Without attempting to make a scientific estimate, which, from the facts available, is impossible, we think a fair percentage of lost time is probably 12½ per cent, no account being taken, nor should any account be taken, of overtime worked in the spring and summer months. There was presented to us a proposed agreement; and the agreement follows:

AGREEMENT

The intention of the following rules is to establish a more harmonious relationship and closer co-operation between the Company whose name is attached to this Agreement, and the Auto Mechanics, members of Local Lodge No. 1006, International Association of Machinists.

Rule No. 1—

It is agreed that the employer will employ only auto mechanics who are members in good standing in the International Association of Machinists of Calgary, Alberta, or those who are both willing and eligible to become members of the said Association within a period of fourteen days from the date of their employment.

Rule No. 2—

(*a*) An auto mechanic who has acquired sufficient knowledge to prove his mechanical ability, to the satisfaction of the trade, shall be considered a journeyman.

(*b*) An auto mechanic who has served two years at the trade, but who has not acquired sufficient knowledge to be rated as a journeyman, shall be classed as an advanced apprentice.

(*c*) Employees shall be paid once a week in cash.

Rule No. 3. Wage Scale—

(*a*) The following rates of pay shall prevail in all shops signing this agreement:

Journeymen	$ 1 00 per hour
Advanced apprentices	0 95 per hour
Apprentices—	
First six months	$ 15 00 per week
Second six months	20 00 " "
Second year	0 65 per hour
Third year	0 75 " "
Fourth year	0 90 " "

(*b*) In shops where work is being done on the flat rate, or piece work basis, the mechanic doing such work shall receive 50 per cent of the price charged on each operation.

(*c*) Where a weekly wage is paid the following rates shall prevail:

Journeymen	$ 40 00 per week
Advanced apprentices	37 50 " "
Apprentices—	
First six months	$ 15 00 per week
Second six months	20 00 " "
Second year	30 00 " "
Third year	35 00 " "
Fourth year	37 50 " "

It is understood that above rates are minimum rates, and anyone now receiving more than the

above rates shall suffer no reduction on account of this agreement.

(*d*) Men working on any other than recognized day shifts shall receive five cents per hour above these rates of pay.

Rule No. 4—

Eight hours shall constitute a day's work, and shall be performed between the hours of 8 a.m. and 5 p.m., except Saturday, when 4 hours shall be worked from 8 a.m. to 12 noon. All the time worked over the above hours shall be considered overtime and paid for at time and one-half. Where more than one shift is employed shall govern accordingly. It is understood that the employee may work on Sundays or holidays, not exceeding two men for minor adjustments of not more than one hour's duration, each for straight time of eight hours. On general repair and overhauling work overtime rates shall apply. Any mechanic called for Sunday or holiday work shall be guaranteed at least four hours' pay.

Rule No. 5—

Each shop may have one apprentice, and one additional apprentice for each five journeymen or advanced apprentices.

Rule No. 6—

No employer shall operate a shop with less than one journeyman.

Rule No. 7—

In case of depression in business, seniority shall prevail in the lay-off of men.

Rule No. 8—

Members regularly employed shall not solicit or do work such as is being done by the employer signing this agreement other than in their employer's business or on their own cars. Any member violating this rule shall be liable to a fine of fifty dollars for the first offence and expelled from Lodge 1006 for the second offence.

Rule No. 9—

There shall be a shop committee appointed, in their own garage, who shall be recognized as an authority to handle all grievances as they may arise. Should the shop committee and the employer fail to settle a dispute, the matter shall be referred to higher officers of the International Association of Machinists. Employees shall not cease work nor strike, nor shall their employer resort to a lock-out while negotiations are being carried on to effect a settlement of any dispute.

Rule No. 10—

The International Association of Machinists shall furnish the employer with a recognized union shop card for display in the shop. The card, however, remains the property of the aforesaid Association, and may be removed upon violation of the rules of this agreement.

Rule No. 11—

The International Association of Machinists agrees to use all legitimate means in its power to further the interests of the employer signing this agreement.

Rule No. 12—

Employees shall furnish all necessary hand-tools used in their work. Special and cutting tools shall be furnished by the employer.

Rule No. 13—

The agreement shall be in full force and effect from the date of signing until..... unless thirty days' notice is given by either party desiring a change.

All new agreements shall be presented thirty days before the expiration of this agreement. It is provided, however, that in case neither party to this agreement presents a new agreement in writing, it shall remain in force and effect from year to year.

Signed for the following garages,

.. ..

Signed for the I.A. of M.

.. ..

The decision of the majority of the Board concerning this agreement is as follows:—

Rule No. 1—

The Board would recommend that the International Association of Machinists, Calgary Local No. 1006, be recognized (subject to the stipulations as to apprenticeship that follow) as the bargaining body for auto mechanics in the City of Calgary, but that the employer be free to employ persons outside this organization if he desires to do so. The Board is also of the opinion that, as a condition precedent to the recognition of a union, the usual clause with reference to not engaging in sympathetic strikes be inserted in any agreement, and further recommends that the union, as far as possible, if it is recognized, organize separate chapels for the various garages in accordance with the practice adopted by the Typographical and other unions.

Rule No. 2 is approved.

Rule No. 3—

In order that some concrete recommendation may be made in this regard, the Chairman of the Board and the men's representative in the circumstances cited above have agreed, with some hesitation on both sides, to the following wage scale, subject always to the institution of the apprenticeship system referred to herein:

Suggested Hourly Rate—48-hour week—

Beginning	First year.. ..	.25c.	per hour
"	Second year.. ..	.35c.	" "
"	Third year.. ..	.50c.	" "
"	Fourth year....	.65c.	" "
"	Fifth year.. ..	.75c.	" "
"	Sixth year.. ..	.80c.	" "
"	Seventh year ..	.85c.	" "

The Board is of the opinion that no person should be entitled to receive the maximum hourly wage, unless he has had a total experience of not less than six years, of which two years shall have been in Calgary, and at least six months in the employing shop. As far as the flat rate is concerned, it is impossible, without a complete survey of each class of individual job, to arrive at a proper disposition as between employer and employee. The present percentage varies considerably, and we believe that the test should be that any reasonably good workman should be entitled to make, on a flat rate basis, at least as much as he could on a straight time basis. A split of 45 per cent for employee and 55 per cent for the employer would, in our opinion, in every instance allow a good return to the employee, but the Board is not to be considered as expressing an opinion that in many cases conditions might not justify either a downward or upward revision of the employees' percentage.

Rule No. 4—

The majority of the Board have agreed upon Rule No. 4, provided that the innovation is entered into gradually, and that no undue dif-

ficulties are experienced in internal organization, or in the public convenience owing to the changed conditions.

Rules 5, 6 and *7* are approved.

Rule 8—
This rule is approved. The question of fines, however, and punishment is a matter for the men's organization to determine and it is the opinion of the Board that any violation of Rule No. 8 should render the mechanic liable to dismissal.

Rule 9 is approved.

Rules 10, 11, 12 and *13* are approved, and require no comment.

In addition to the rules, as amended, quoted above, we believe that the men's organization is not entitled to recognition, and the benefits that accrue from their continued existence as a bargaining body, unless they on their part undertake with the employer to institute, and continue, an efficient system of apprenticeship in which young men entering the business will at their own expense and not at the expense of the employer, be trained both practically and theoretically in this very important trade. We believe that it should be incumbent upon all journeymen to instruct apprentices in the practical part of their work; that apprentices should be obligated to attend the Provincial Institute of Technology in their own time and at their own expense; and that some system of examination or other test be regularly and impartially introduced and continued.

In conclusion may be expressed the hope that both parties will show a desire to meet the views of the other, remembering that the trade they represent plays a very intimate part in the daily life, safety, and welfare of the public.

All of which is respectfully submitted.

(Sgd.) A. DAVISON,
Men's Representative.

(Sgd.) LEONARD W. BROCKINGTON,
Chairman.

January 25, 1930.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

FIVE new decisions and a supplement to an earlier decision were recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods; the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the LABOUR GAZETTE, December, 1929, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

Supplement No. 1 to Case No. 348.—Canadian National Railway, (Atlantic Region) and Brotherhood of Railroad Trainmen.

This case was outlined in the LABOUR GAZETTE, November, 1929, page 1206. It concerned the dismissal of a conductor for an alleged neglect of orders, the Board deciding that discipline by dismissal was unduly severe, and that the employee should be reinstated, with a recommendation that the company should consider the question of compensating him for the time he was held out of service. In a subsequent statement issued by the Board and signed by the general Chairman of the Brotherhood, it was intimated that repeated efforts had been made to settle the case with the company on the basis of the Board's decision, but that the company declined to agree to do so, and the Brotherhood therefore submitted the case for further consideration and decision.

Case No. 352.—Northern Alberta Railway Company and Order of Railroad Telegraphers.

On April 9, 1929, a lineman carried a passenger on his speeder without having obtained permission from the general manager's office to do so. However, he had secured the passenger's signature to a standard form, being a release of responsibility on the part of the company in case of accident. The speeder met with an accident during the trip in which this passenger was slightly injured. The lineman, at the request of the passenger, in making his report of the accident, stated that nobody had been hurt. Later he was dismissed for giving false evidence at investigation and for violation of the general manager's instruc-

tions. The evidence showed that the passenger was a timber cruiser for the Dominion Lands Department, and had formerly worked for the railway as a tie inspector. The company maintained that the lineman carried the passenger without authority and without any transportation charge, and that he had endeavoured by giving false evidence to cover up his violations of the regulations. They therefore refused to consider his reinstatement. The evidence submitted to the Board indicated that the lineman had committed an error in carrying a passenger without proper authority. Under all the circumstances of the case, however, the Board recommended reinstatement as from February 15, 1930.

Case No. 353.—Northern Alberta Railways Company and Order of Railway Telegraphers.

Owing to wire trouble it was necessary, in order to move an extra train, to send a lineman ahead by speeder to arrange protection of the train at the next station. The lineman on arriving was unable to locate the station agent, who had gone off duty, and it was alleged that he took no further action towards the protection of the train. For his failure to do so he was given forty demerit marks. The employees contended, however, that the employee had done his best to deliver the message and should not be disciplined. The Board did not sustain the contention of the employees.

Case No. 354.—Northern Alberta Railways Company and Brotherhood of Maintenance of Way Employees.

A section foreman was asked by the Provincial Police Department of Alberta to transport the body of a deceased workman for burial to a point 56 miles distant. He replied that permission from the railway would be necessary, and this permission having been obtained he transported the body by handcar. As he arrived at night and could not return that day the Workmen's Compensation Board advanced him ten dollars with which to pay the board and lodging expenses of himself and his assistant. Afterwards the railway company wrote asking him to remit the sum to the railway, and to this letter the foreman replied with the suggestion that the railway should ascertain from the Workmen's Compensation Board the facts as to the disposition and use of the ten dollars, and if, after doing so, the management still desired him to remit the money to the company, he would do so. No reply was received to this communication until the discipline of twenty demerit marks, followed by dismissal, was imposed. Officers of the Brotherhood of Maintenance of Way Employees took up the case with the general manager, who refused to consider any modification of the discipline imposed, and declined to join in a submission of the case to the Canadian Railway Board of Adjustment No. 1.

The Board sustained the claim of the employees.

Case No. 355.—Canadian National Railways (Atlantic Region) and Brotherhood of Railroad Trainmen.

A brakeman was dismissed for his share of responsibility in connection with a collision between a freight train and ballast cars which were permitted to leave the passing track and run out on the main track. He was reinstated after nearly two months, but the conductor and the rear brakeman, who were also dismissed, remained out of service. The employees contended that the facts of the case did not warrant the brakeman's dismissal, and that he should be reimbursed for all time lost. The Board considered that the fact of the brakeman's permitting several cars to run out of the siding and to collide with a main line train was a proper cause for dismissal, and did not sustain the claim of the employees.

Case No. 356.—Northern Alberta Railways Company and Brotherhood of Locomotive Firemen and Enginemen.

Clause A of Article 34 of the enginemen's schedule provides that "Enginemen in through freight service not on an assigned run will run first in first out. When for an avoidable reason (on the company's part) they are run around they will be paid fifty miles for each run around."

An engineman and fireman submitted a claim for payment for fifty miles under this provision, alleging that they were not on any assigned run, and stood first for service, and that another crew had been sent out on a trip to which they were entitled. The company contended, however, that these men held a regularly assigned run, and did not come under the foregoing rule. The Board did not sustain the claim of the employees.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1930

THE number of strikes and lockouts in existence in Canada during February was five, as compared with four the preceding month. The time loss for the month was almost twice as great as that for January, the strike of women's clothing factory workers at Hamilton involving approximately 2,000 workers accounting for the greater part of this increase. As compared with February, 1929, the figures for February, 1930, show that, while fewer strikes occurred, over twice as many workers were involved although the time loss was much smaller than during the same month in 1929 during which a strike of cotton factory workers at Hamilton, Ont., and a strike of coal miners at Wayne, Alta., caused considerable time loss.

Date	Number of disputes	Number of employees involved	Time loss in working days
*February,1930.....	5	2,952	13,840
*January, 1930.....	4	1,949	7,610
February, 1929.....	6	1,218	21,760

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving 1,852 workers, were carried over from January and three disputes commenced during February, all of which terminated during the month, two being in favour of the employers and three in favour of the workers. At the end of the month, therefore, there were no disputes recorded as strikes or lockouts.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to five such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; photo engravers, Toronto, Ont., January 7, 1929, one employer; moulders, Lachine, P.Q., May 2, 1929, one employer, and shoe factory workers, Montreal, P.Q., January 23, 1930, one employer.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

BOOT FACTORY WORKERS, MONTREAL, P.Q.—In connection with the dispute involving boot and shoe workers in one factory in Montreal, from January 23, as stated in the last issue of the LABOUR GAZETTE the employees ceasing work on that date applied to the Minister of Labour for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act on January 27. As a Board in this industry can be established only with the consent of the employer, and this was refused on February 7, no further proceedings were possible. The employer reported that he had signed a closed shop agreement with the Boot and Shoe Workers' Union, that the establishment was being operated one hundred per cent, and that many of those who had ceased work had returned and applied for employment. The National Catholic Union of Shoe Workers reported that fifty-two out of the one hundred and twenty employees had ceased work when notified of the above mentioned closed shop agreement, that early in March one-half of these had secured work elsewhere. The dispute has accordingly been added to the list of those not called off by the union although employment conditions are no longer affected.

WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This dispute, involving employees in sixty-six women's clothing factories in Toronto from January 28, was terminated on February 10 as result of the mediation of the Mayor and the Board of Control of the city of Toronto. An agreement was signed between the union, the International Ladies' Garment Workers' Union of America, and an association of employers providing for a ten per cent increase in wages for piece workers, time and one-half for overtime, and the regulation of hours of labour to secure better observance of the forty-four hour week with the result that it is estimated two hundred additional employees will be required.

COAL MINERS, GLACE BAY, N.S.—Coal miners in one mine at Glace Bay ceased work on February 4, protesting against the demotion of an employee who had not been coming to

work regularly. The company stated that he had been offered another job, but that he had not appeared for work. The following day the strikers resumed work.

KNITTING FACTORY WORKERS, HAMILTON, ONT.—Certain employees in a knitting factory ceased work on February 6, having been informed that they must agree not to organize or join a union without giving two weeks' notice. It appears that a number of these employees in one department of the factory had joined the American Federation of Full Fashioned Hosiery Workers affiliated with the United Textile Workers' Union of America and the total number in the Department, one hundred and thirty, ceased work, indirectly involving the four hundred other employees in the factory. At the request of the union conciliation officers of the Department of Labour took the question up with the management which agreed that there would be no interference with the right of freedom of association, that all employees would be re-engaged without discrimination and that the company was prepared to deal at any time with individual employees or a properly constituted committee of employees. Work was, therefore, resumed after three and one-half days.

PILE DRIVERS, LULU ISLAND, B.C.—Employees on a railway bridge construction job ceased work to secure the recognized standard rates of wages and working conditions. The matter was taken up with the office of the resident representative of the Department of Labour at Vancouver, following which it was arranged between the contractor and the union that the former would pay the union wages for the district and workmen brought from elsewhere would be returned, the strikers being re-engaged.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1930

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(*a*) Strikes and Lockouts in Progress Prior to February, 1930			
MANUFACTURING—			
Boots and Shoes (other than rubber and felt)—			
Boot factory workers, Montreal, P.Q.	52	300	Commenced Jan. 23, 1930; against closed shop for certain union. Employment conditions no longer affected by Feb. 8, 1930. In favour of employer.
Clothing (including knitted goods)—			
Women's clothing factory workers, Toronto, Ont.	1,800	12,000	Commenced Jan. 28, 1930; for union agreement. Terminated Feb. 10, 1930. In favour of workers.
(*b*) Strikes and Lockouts Commencing during February, 1930			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Glace Bay, N.S.	950	950	Commenced Feb. 4, 1930; against demotion of worker. Terminated Feb. 6, 1930. In favour of employer.
MANUFACTURING—			
Clothing (including knitted goods)—			
Knitting factory workers, Hamilton, Ont.	130	450	Commenced Feb. 6, 1930; for freedom of association. Terminated Feb. 11, 1930. In favour of workers.
CONSTRUCTION—			
Railway—			
Pile drivers, Lulu Island, B.C.	20	140	Commenced Feb. 21, 1930; for union wages and working conditions. Terminated Feb. 28, 1930. In favour of workers.

ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA

THE annual report of the Department of Labour of Canada for the fiscal year ended March 31, 1929, recently issued, describes the work carried on by the Department in the interest of labour. The following statutes are now administered under the authority of the Minister of Labour:—(1) The Labour Department Act providing for the collection of labour statistics and for its monthly publication in the LABOUR GAZETTE; (2) The Conciliation and Labour Act; (3) The Industrial Disputes Investigation Act; (4) The Government Annuities Act; (5) The Old Age Pensions Act; (6) The Employment Offices Co-ordination Act; (7) The Technical Education Act; (8) The Combines Investigation Act; (9) The White Phosphorus Matches Act. No infractions of the White Phosphorus Matches Act were reported during the year. This Act prohibits the manufacture, sale and importation of matches made with white phosphorus. The Minister of Labour administers also the Fair Wages Policy of the government in conformity with the resolution of the House of Commons in 1900.

The report refers to the prosperous condition of commerce and industry in Canada during the period covered, the employment situation having been favourable, with a marked expansion in the construction and manufacturing industries. Wages showed an upward trend during the year, but with a slight decline in common factory labour. The year was remarkable for its comparative immunity from industrial disputes, the record of time lost through this cause having been better than for any year since 1916, with the single exception of 1927. The conciliation services of the Department were used in the adjustment of a large number of disputes. The position of wage investigator and mediator for work in the Maritime Provinces was created during the year, the duties of the position being similar to those of fair wage officers elsewhere, and including the compiling of fair wage schedules for Government building and construction work; investigating complaints as to working conditions, rates of pay and hours of labour; acting as mediator between employers and employees looking to the prevention of strikes and lockouts; and other related work as required.

Industrial Disputes Investigation Act

All reports and minority reports made by boards or members of boards established under the provisions of the Industrial Disputes Investigation Act during the year were, as required by the statute, published in the LABOUR GAZETTE. In addition to its application to industrial disputes in mines and public utility industries coming within the jurisdiction of the federal authorities, the Industrial Disputes Investigation Act is operative in respect to similar disputes falling within the provincial sphere in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, and Nova Scotia, these provinces having taken the necessary legislative action. Five board applications which were dealt with during the year came within this category. The provinces of Ontario, Quebec, and Prince Edward Island have not yet enacted enabling legislation on the subject.

Disputes dealt with under the Industrial Disputes Investigation Act during the fiscal year 1928-29 numbered 25. Boards of Conciliation and Investigation were granted in 13 cases. Although many of the disputes were difficult of settlement, in only one case was the threatened strike not averted. This was in the coal mining industry, and, while the dispute related nominally to the method of screening coal, the question of recognition of a certain union was the underlying cause of the strike. Three strikes falling outside the direct scope of the statute were terminated during the year through the conciliatory methods employed by the minister and departmental officials in securing the consent of the disputing parties to refer the matters at issue to Boards of Conciliation and Investigation established under the terms of the Industrial Disputes Investigation Act. The proceedings under the Act during the year are fully described in this section of the report, and tables are given showing the number of cases occurring in various industries throughout Canada since the inception of the Act in 1907.

Conciliation Work

During the year under review the services of the department were, under the authority of the Conciliation and Labour Act, chapter 110, R.S.C. 1927, employed in connection with the adjustment of a large number of labour disputes. In several instances applications were received for the establishment of Boards of Conciliation and investigation having to do with disputes which did not come directly within the scope of the Industrial Disputes Investigation Act. In such cases, with hardly an exception, the officers of the department either were successful in inducing the parties to the dispute to agree to board proceedings by joint consent, or were able to adjust these matters without the necessity of a board.

Several applications for boards in connection with disputes covered by the Act were also dealt with by departmental officers and settlements brought about without the necessity of board proceedings. In many cases where the settlement of a dispute was secured by conciliation and a strike did not occur, it was considered desirable to give the matter as little publicity as possible. For this reason the department's most successful efforts in conciliation work often become known only to those immediately concerned.

The Minister of Labour evinced a personal interest in the settlement of all industrial controversies which came to the attention of the department and personally mediated in a number of individual disputes, his efforts in promoting good relations between employers and employees meeting with signal success both in Eastern and Western Canada. Through his instrumentality a number of threatened interruptions of work were avoided.

The Department of Labour has on its staff Fair Wages Officers and mediators who are stationed at different industrial centres. The officers last year were: Messrs, F. E. Harrison, resident in Vancouver, who is the departmental representative for the four western provinces; E. N. Compton, resident in Toronto, whose territory comprises the province of Ontario; the late Theo. Bertrand, Montreal, assigned to the province of Quebec; E. McG. Quirk, resident in Montreal, who, although not actually an officer of the department, acted on various occasions in connection with conciliation work in the province of Quebec; and T. W. Martin, resident in Halifax, whose territory comprises the three Maritime Provinces. The headquarters of Mr. M. S. Campbell, Chief Conciliation Officer, are at Ottawa. All of these officers rendered highly efficient service in the handling of the various strikes and labour disputes which were assigned to them by the department.

As has been the custom in previous years, visits were made from time to time by the Fair Wages Officers to many important centres of Canada and in several instances to outlying sections with the object of keeping in contact with industrial conditions throughout the entire country and obtaining information concerning wage rates having bearing on various federal Government construction contracts.

In recent years there has been a marked tendency on the part of employees to bring their grievances to the attention of the department before resorting to strike measures. Where such opportunities have been afforded, departmental officers have been highly successful in bringing about an amicable adjustment of the difficulty. It is stated that "experience in such matters has very clearly demonstrated that it is much easier to negotiate successfully in a friendly atmosphere and more satisfactory results are obtained under such circumstances. Settlement of disputes under these conditions means that there is no loss of wages to the employees concerned and no stoppage of work or inconvenience to the industry. It is therefore to be hoped that the tendency in this direction may be even more marked in succeeding years."

Fair Wages on Government Contracts

The Fair Wages Policy of the Government of Canada has been administered by the Department of Labour since its inception in 1900. This policy is based on a resolution of the House of Commons which was adopted at the session of 1900 and is expressed at present in an Order in Council of June 7, 1922, with certain amendments which were made by Order in Council of April 9, 1924. Under the terms of the Order the departments of the Government concerned are required to furnish monthly to the Department of Labour returns showing the nature of all contracts which have been entered into during the month preceding to which these conditions apply, the names and addresses of the contractors, the dates and amounts of the contracts, and the text of the Fair Wages Schedules, if any, inserted in such contracts. This information is published monthly by the Department of Labour in the LABOUR GAZETTE.

Since the inception of the Fair Wages Policy in 1900, Fair Wages officers have been employed by the Department of Labour to prepare Fair Wages schedules as required, and to assist in the adjustment of complaints and disputes arising from time to time as to the proper rates observable under the terms of Government contracts. As in previous years a number of complaints were received of alleged non-compliance with the labour conditions of Government contracts. In all cases these complaints were investigated and when found to be well founded, the contractors were required to make proper settlement with the workmen concerned. A table is appended hereto containing a list of complaints which were dealt with by Fair Wages officers during the fiscal year.

During the year 1928-29 the Department of Labour prepared Fair Wages conditions in connection with the execution of two hundred and eighteen contracts (218). These were divided among the different Departments of

the Government as follows: Indian Affairs, 5; Interior, 1; Marine and Fisheries, 23; National Defence, 21; Public Works, 148; and Railways and Canals, 20.

Old Age Pensions

This chapter constitutes the third annual report of the administration of old age pensions in Canada under the provisions of the Old Age Pensions Act, chapter 156, R.S.C., 1927, being for the fiscal year ending March 31, 1929. During the fiscal year the provinces of Alberta and Ontario adopted the Dominion old age pension scheme by provincial legislation. Old age pensions were also made payable in the Northwest Territories by order of the Governor in Council under the provisions of section 6 of the Dominion Act. By Proclamation of the Lieutenant-Governor of Saskatchewan the Old Age Pension Act of that province was brought into force and an agreement was entered into, under the provisions of which old age pensions are payable in that province from and after May 1, 1928. The Manitoba Old Age Pensions Act was brought into effect on September 1, 1928, by Proclamation, and an agreement whereby old age pensions are payable in Manitoba from and after that date.

An Interprovincial Board under the provisions of section 19 (*r*) of the federal Act was appointed by Order of the Governor in Council (P.C. 1806) on October 3, 1928.

In the financial year ending March 31, 1929, the total amount paid for old age pensions in Canada was $1,669,548.92. The provincial pension authorities recovered from the estates of deceased pensioners under the provisions of section 9 (3) of the Act the sum of $33.02. There was also refunded to the pension authorities $4,142.36 on account of amounts improperly paid under the provisions of regulation 28, leaving the net amount paid for old age pensions at $1,665,373.54. The Dominion Government paid one-half of this amount to the provinces of British Columbia, Saskatchewan and Manitoba.

Employment Service

The primary function of the Employment Service Branch is administrative—that of administering the Employment Officers Co-ordination Act (chapter 57, R.S.C., 1927). This Act empowers the Minister of Labour

(*a*) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;

(*b*) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;

(*c*) to compile and distribute information received from employment offices, and from other sources, regarding prevailing conditions of employment.

The employment offices whose co-ordination and uniformity of methods are sought are the employment offices of the various Provincial Governments. The desired co-operation of the provinces, one with the other and all with the Department of Labour, is obtained by the device of federal subventions for employment service work provided for in the Act. In view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity, are commonly considered as a single organization known as "The Employment Service of Canada."

Emanating from the administration of the Act is the supplementary function recited in (*c*) above—that of collecting, compiling and publishing information which sheds light on the currently prevailing trend of the volume of employment. To fulfil this mission two classes of statistics are regularly prepared: (1) administrative statistics—those showing the volume of work performed by the offices of the Employment Service of Canada; and (2) trade union statistics—those compiled on the basis of monthly returns forwarded voluntarily by over 1,700 local trade unions, showing the percentages of their memberships unemployed. These statistics are all published monthly in the Labour Gazette.

Employment offices operating under the Dominion-Provincial Employment Service in 64 centres in Canada registered a total of 600,628 applications for employment and effected 472,977 placements during 1928-29, as compared with 556,754 applications and 418,306 placements during the preceding fiscal year. Of the 472,977 placements effected 226,837 were made in municipalities other than those in which employment offices operate, and in 34,927 cases the applicants were assisted to move to employment by a special reduced transportation rate. The average cost per placement made by the Employment Service during 1928-29 was approximately one dollar.

The report states that "employers throughout the country are to be specially commended for the continuation of their interest in men who are partially disabled due to service in the late war. Co-operation with the

Employment Offices by employers has resulted in the permanent establishment of a substantial number of these disabled men, by giving them a chance to fit in where the nature of the disability does not interfere with the work required. Positions were found during 1928-29 for 8,959 handicapped ex-service men, 2,751 of whom were placed in regular employment."

Statistics

The section of the report dealing with the statistical work carried on by the Department contains information as to strikes and lockouts, wages and hours of labour, prices and cost of living, and fatal industrial accidents. Statistics of employment and unemployment, labour organizations and other subjects are given in other chapters. Statistical and other information relating to labour conditions has been collected and published by the Department of Labour since its establishment in 1900 as required by statute (Labour Department Act, chapter 111, Revised Statutes, 1927, section 4). In accordance with the Statistics Act (1918), chapter 190, Revised Statutes, 1927, and under arrangements with the Dominion Statistician, statistics are collected and published in co-operation with the Dominion Statistican, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics.

The "Labour Gazette"

The LABOUR GAZETTE was published regularly each month during the period covered by this report, both in English and French, the issues for 1928 forming the twenty-eighth yearly volume of the series. Its publication was one of the original functions of the department, section 10 of the Conciliation Act of 1900 (section 4 of the Labour Department Act, Revised Statutes of Canada, 1927, chapter 111), providing that the new department should issue this periodical for the purpose of disseminating accurate information in regard to labour affairs. The average number distributed each month was 12,483 of the English edition and 1,976 of the French. The average monthly paid circulation was 7,524, or 6,260 of the English edition and 1,264 of the French.

Labour Organization in Canada

The eighteenth annual report on Labour Organization in Canada, covering the calendar year 1928, which was prepared in the Labour Intelligence Branch, was along lines similar to its predecessors and gave information as to the nature of the labour bodies with which the organized workers in the Dominion are identified. The report also gave statistics of trade unionists in the Dominion, and contained references to some of the more important events of interest to organized labour and those who concern themselves with such matters.

Organization in Industry, Commerce and the Professions

The Labour Intelligence Branch also prepared the seventh report on Organization in Industry, Commerce and the Professions in Canada, a volume which made its first appearance in 1921 with a view to meeting the demand for information showing the extent of organization in the Dominion among persons engaged in industrial, commercial and professional pursuits. The favourable reception given the first report induced the department to issue a second volume on the same subject, and since 1923 the report has appeared annually, that for 1928 being counted as the seventh.

Co-operative Associations

Another volume prepared in the Labour Intelligence Branch was the report on Co-operative Associations in Canada. Previously information on this subject had appeared in the report on organizations in industry, commerce and the professions, but the importance of the co-operative movement in the Dominion prompted the preparation of a separate report, the first of which appeared in the summer of 1928.

Labour Legislation in Canada

The report on Labour Legislation in Canada as existing on December 31, 1928, was published during the year. It is a consolidation of all labour legislation existing at that date and the third consolidated report issued by the Department of Labour, the others having appeared in 1915 and 1920. In the selection of material the term labour legislation was given a broad interpretation. Dominion and provincial statutes which give protection to workers or impose obligations on them are given in full or in abridged form. The report also contains summaries of laws such as those relating to old age pensions and mothers' pensions which, although falling under the head of social rather than labour legislation, are of sufficient interest to labour to warrant their inclusion. The report shows legislation since 1920 to have been chiefly a

gradual extension of existing laws with few striking changes and few new fields explored. However, the British Columbia Male Minimum Wage Act, providing for minimum wages for male employees in most industries in the province, and the Apprenticeship Act passed by the Ontario Legislature, providing for the control and regulation of apprentice training in certain designated trades, are the first legislation of the kind in Canada.

Combines Investigation Act

Decision to test the constitutional validity of the Combines Investigation Act, by referring the question to the Supreme Court of Canada, was reached during the fiscal year. The usefulness of the Act had been not a little hampered in recent years by reason of doubts which have been raised as to its validity. An adverse opinion expressed by Chief Justice Meredith in 1923, in interpreting the decision of the Privy Council in the Board of Commerce case, was widely quoted. Other judicial opinions were divided on the point. Under the circumstances, it was considered essential for the due enforcement of the provisions of the Act that the questions raised should be set at rest and a definite ruling obtained. The Supreme Court, in a judgment delivered shortly after the close of the fiscal year, found unanimously in favour of the validity of the Act.

Attention was given during the year to the efforts of certain trade associations to defeat the purpose of the Combines Investigation Act by securing registration under the Trade Unions Act. Under the latter statute, which was passed in 1872, registered trade unions, including organizations of employers as well as of employees, are exempted from prosecution for conspiracy merely because some one or more of their purposes might be in restraint of trade. The activities of one of these trade associations, in the plumbing and heating industry, were under observation, but the investigation was not proceeded with until the validity of the Act was passed upon. Other inquiries carried out during the year related to the milk industry in one of the larger cities, to one of the branches of the clothing industry, to two alleged combines in which the element of international combination played an important part, and to other combinations in the fields of manufacture and distribution.

Canadian Government Annuities

The safety and certainty of the Government annuity system, having as it does the assets of the whole Dominion behind it, has popularized this form of investment to a remarkable degree, and shows the natural thrift and forethought of the increasing number of Canadian people who have thus provided for their old age. On March 31, 1929, there were 10,264 annuity contracts in force, purchase money received from the date of the enactment of the Government Annuities Act in 1908 totalling $21,703,612.71, over one-third of this money having been received during the past two years.

During the fiscal year ending March 31, 1929, annuity contracts numbered 1,328, representing an increase of 8.6 per cent over the number of contracts issued during 1927-28, and 164 per cent over 1926-27, while the amount of purchase money, $4,272,418.87, was 11 per cent greater than that received during the preceding fiscal year, and 125.5 per cent greater than the amount received in the fiscal year 1926-27.

Technical Education

This chapter of the report contains a review of the activities carried on throughout Canada during the year with the aid of funds provided by the Technical Education Act. The ten-year period during which federal grants were available to the provinces under the Act terminated on March 31, 1929. Owing, however, to the fact that eight of the nine provinces were unable to earn their full appropriations during the ten years contemplated by the statute, the Act was amended at the 1929 session of Parliament in order to extend the period of time during which those eight provinces might earn the balance of the funds to which they were entitled under the provisions of the Act. Ontario is the only province which has received its entire appropriation and payments thereto have ceased. The year under review showed most gratifying and substantial progress. Returns for 1928-29 indicate that enrolments generally have continued to increase and that a constantly increasing number of persons are taking advantage of the opportunities extended to them to secure vocational instruction. The grants paid to the provinces for the fiscal year ended March 21, 1929, amounted to $1,152,165.26, an increase of $186,209.94 over the previous year. As indicated above, the province of Ontario has earned and received its entire appropriation and payments thereto have ceased. Under the amendment, cited above, all other provinces have an additional five years in which to earn the balance of their allotments.

International Labour Organization

An account is given of the participation of Canada in the work of the Eleventh International Labour Conference at Geneva. The Canadian delegation took a prominent part in the deliberations of the conference, among the resolutions adopted being two having to do with industrial relations submitted by Mr. Champ, the employers' delegate from Canada. The first resolution stressed the collection of reliable and detailed data by the International Labour Office on methods employed to decrease or eliminate the various causes of decreased production, and the second resolution asked the International Labour Office to follow the development of the spirit of collaboration between employers and employees and to report on the subject from time to time. The resolutions were supported by the two Government delegates and the workers' delegate from Canada.

Library of the Department

The library of the Department of Labour was organized in 1900 when the department was created, and has steadily increased its collection of documents since that time. Through the exchange of publications with departments of other Governments carrying on work along similar lines, the department is kept in touch with labour matters in almost all countries of the world.

Subject to the requirements of the departmental officers, the services of the library are at the disposal of the general public, and frequent use is made of its material by students from the Canadian universities and by others interested in labour problems. Books are sent by mail, wherever possible, to any persons wishing to borrow them and special information and bibliographies are compiled when required.

LABOUR AND INDUSTRY IN SASKATCHEWAN

Annual Report of the Department of Railways, Labour and Industries for 1928-1929

THE annual report of the Department of Railways, Labour and Industries of Saskatchewan reviews the activities of the Department during the year ended April 30, 1929. It is the ninth report since the Bureau of Labour and Industries was established, and it is the first report since the new department was formed in March, 1928. The functions of the Labour Branch include the administration of the Factories Act, the Building Trades Protection Act, the Electrical Workers Protection Act, the Employment Agencies Act, the Mines Act, and the Minimum Wage Act. The Bureau is also charged with the duty of preparing statistics of employment, wages and hours of labour, strikes and lockouts, labour organization, industrial relations, conditions of industrial employment and the natural resources of the province. The Railways Branch concerns itself with questions of adjustment of freight rates, locations of branch lines, retention of station agents, and other matters having to do with railway development of the province.

Industrial Statistics.—The accompanying table gives the principal statistics concerning industrial activity, indicating the capital investment, number of employees, salaries and wages, etc.

COMPARISON OF INDUSTRIAL STATISTICS OF SASKATCHEWAN FOR 1926 AND 1927

Principal Statistics	1926	1927
Establishments reporting.....No.	674	721
Capital invested..... $	33,943,060	38,387,248
Employees.....No.	4,904	5,683
Salaries and Wages..... $	6,397,545	7,280,945
Cost of fuel..... $	1,606,284	1,722,526
Primary power equipment.....h.p.	75,059	98,224
Cost of materials..... $	29,128,035	32,165,027
Gross value of products..... $	47,108,097	52,180,681
Net value of products..... $	17,980,062	20,015,654

Other Industries.—The total value of the mineral production of the province in 1928 was $1,536,965 as compared with $1,336,807 in 1927. Of this amount the value of coal production was $817,204. The production of coal mines totalled 467,131 tons, and the average number of miners employed was 403. This section of the report particularly emphasizes the recent major mining development in Northern Saskatchewan and the mapping of important new mineral areas.

The fur industry of the province closed the year, showing a slight increase in volume, the estimated amount paid to trappers during the 1927-28 season being $1,821,484 as compared with $1,609,782 in the previous season.

The principal statistics in regard to the lumbering industry in Saskatchewan, were

compiled by the Dominion Department of Trade and Commerce. There were 10 mills in operation during the year with an invested capital of $566,977, and a gross production value of $664,260. The number of employees totalled 493, and salaries and wages amounted to $266,533.

The product of the commercial fisheries in 1927 had a total market value of $503,609. Compared with the preceding year, the value of the product increased by $59,321. Whitefish is of first importance, representing 75 per cent of the total value of the fish production of the province.

During the period from May 1, 1928 to April 30, 1929, the Employment Service placed 56,977 men in employment on the farms. The average wage for farm work prevailing throughout the year was as follows: winter work $10 to $25 per month; spring work $35 to $50 per month; harvest work, $4 to $6 per day; fall work, after threshing to freeze-up, $50 per month.

Employment Service.—The work of the Employment Service in the Province is dealt with in regular articles appearing in the Labour Gazette. Nine permanent offices are maintained in Saskatchewan and the average cost of placements is 64 cents.

Strikes and Lockouts.—There were only two industrial disputes in the Province during the year, which represented less than one-half per cent of the total of Canada. In these two disputes there were 115 employees involved with a time loss of 947 working days.

Immigration.—The section of the report dealing with immigration outlines the provisions of the Empire Settlement Act whereby British immigrants destined for agricultural or domestic work are assisted to Canada. The report points out that immigration is divided into two main groups—British and Continental—with the latter sub-divided into preferred and non-preferred countries. Immigration into the province during 1928 was estimated at 15,222, as compared with 16,168 in 1927; and 19,816 in 1926. Of the total immigration into Saskatchewan in 1928, the largest number—3,422—came from the United States. By racial origin, the British immigration totals were as follows: English 2,055; Scotch, 861; Irish, 560; Welsh, 202. Next in numerical strength was German immigration totalling 1,906, followed by Ruthenian with 1,724 immigrants.

Accidents and Accident Prevention.—The report of the industrial inspection division outlines its work, under the provisions of the Mines Act; the Minimum Wage Act; The Factory Act; and Elevator Regulations. There were 66 recommendations for greater safety in the operation of elevators, while 86 recommendations were made for safety promotion in factories. In this respect it is stated that "despite the rapid growth in the number of factory employees during the year, the accident ratio has been kept well down, which speaks well for the careful planning of machinery lay-out as well as the widespread adoption of safety guards and devices." In all, there were 606 inspections of factories and 594 of elevators.

The steam boilers' branch reported no accidents or casualties during the year. This branch inspected 2,121 boilers in the period under review and issued 1,385 engineers' certificates. It reported that the steam engine is gradually being discarded for agricultural purposes, being replaced on the farms by gas engines and combines.

Regular inspections were made by the coal mines inspection branch of all coal mines in the province, in addition to special investigations of accidents and underground fires occurring in old workings. During the year only one fatal accident occurred, and 38 non-fatal accidents mostly of a minor character. Three fires, which broke out in underground workings, were ordered sealed off under the supervision of the inspector, and as a result no underground fires were known to be active at the end of the year.

The industrial accidents are summarized in the accompanying table:

ACCIDENTS AND TIME LOSS IN VARIOUS INDUSTRIES IN SASKATCHEWAN, 1928-9

Trade or Industry	Fatal	Permanent	Temporary	Time lost in days
Building trade	2	4	62	903
Electrical or metal trades	1	1	60	849
Lumbering	2	.....	15	178
Mines (coal)	1	3	35	714
Food preparation	.....	2	63	913
Railways, steam and electric	2	14	758	15,947
Railway construction	.....	1	39	485
Printing and publishing	.....	1	6	141
Woodworkers	.....	1	6	158
Civic employees	.....	.....	64	748
Elevators	5	4	50	1,945
Miscellaneous	2	3	39	691
Total	15	34	1,197	23,672

Labour Legislation.—The report outlines the legislation enacted during the year and the amendments to existing Acts. The labour legislation enacted during 1929 was reviewed in the Labour Gazette for April, 1929, page 379.

Minimum Wages in Saskatchewan, 1928-29

The report of the Minimum Wage Board of Saskatchewan for the year ended April 30, 1929, is incorporated in the annual report of the Department of Railways, Labour and Industries.

Touching on the revision in 1928 of all of the orders issued by Board (LABOUR GAZETTE, August, 1928, page 851) the report states that such action was necessary in order to make the orders uniform in as many respects as possible, and to clarify some sections.

The allegation sometimes made that where minimum wage regulations are in force the minimum wage becomes the actual maximum is refuted in the report, which declares that this has not been the experience in Saskatchewan. The highest minimum wage set by the Board for experienced workers is $15 per week. The tabular summaries indicate that in shops and stores and beauty parlours for which this minimum of $15 per week is set, there were 616 women who received $16 per week and over. Also, in laundries, factories and mail order houses, for which the minimum of $14 per week is set, 337 women received $15 per week and over. Out of a total of 2,431 women employed (exclusive of those in hotels, restaurants, etc.) 953 received more than the minimum rates set by the Board.

The following paragraphs give the chief statistics in connection with the administration of the several Orders in 1928-29:

Shops and Stores.—Number of firms, 237; number of employees 1,432 (inexperienced, 468, experienced, 964); employees on piece work and part time, 94; experienced employees receiving the minimum wage rate of $15 per week or over, 914; inexperienced employees receiving under $15 per week, 424.

Laundries and Factories.—Number of firms, 80; number of employees, 451 (inexperienced 148, experienced 303); employees on piece work and part time, 7; experienced employees receiving the minimum wage of $14 per week or over, 299; inexperienced employees receiving under $14 per week, 145.

Mail Order Houses.—Number of firms, 5; number of employees, 366 (inexperienced 63, experienced 303); employees on piece work and part time, 1; experienced employees receiving the minimum rate of $14 per week or over, 304; inexperienced employees receiving under $14 per week, 61.

Beauty Parlours and Barber Shops.—Number of firms, 52; number of employees 182 (inexperienced 9, experienced 119); number of apprentices paying premiums, 54; number of employees on part time, 12; experienced employees receiving the minimum wage of $15 or over, 109; inexperienced employees receiving under $15 per week, 7.

Hotels, Restaurants and Refreshment Rooms.—Number of firms, 206; number of employees 1,026 (inexperienced 31, experienced 995); employees on piece work and part time, 10. The minimum wage of experienced employees is $13 per week for a six-day week and $14 per week for a seven-day week. The Order also permits a deduction of $5.25 per week for board of 21 meals, and of $2.50 for lodging per week of seven days. The number of employees receiving $14 per week or over was 126. Experienced employees receiving $13 per week or over numbered 160. Inexperienced employees receiving under $13 per week totalled 855. A considerable proportion of the employees in this group receive board and lodgings, or both, as part compensation.

Vocational Guidance at Hamilton, Ontario

The need for vocational counsellors in schools was urged by Mr. A. Sorsoleil, a member of the staff of the Ontario Training College for Technical Teachers, at Hamilton, in a recent address to the members of the Hillcrest District Neighbourhood Workers' Association, Toronto. He pointed out that 6,500 students attend night schools in 65 Ontario centres.

"The task of our schools, is to provide equal opportunity for every individual coming within their influence. That is what democracy means—and this can only be done by presenting sufficient variation in the curriculum to meet the needs of all. For that reason we have public and high schools, technical, commercial and auxiliary schools. Our greatest need at present is a vocational counsellor in every school, some one who will study each individual and the occupations available so that we can make an end of fitting square pegs into round holes. A beginning at this important branch of service will be made in Hamilton this summer when the first group of specialists in vocational guidance will be trained."

CHILD WELFARE AND MOTHERS' ALLOWANCES IN MANITOBA

THE fourth annual report of the Child Welfare Division of the Department of Public Welfare of Manitoba, just published, gives an account of the activities of the Division during the year ended April 30, 1928. The report embodies the 12th annual review of Mothers' Allowances work. As noted in the Labour Gazette (May, 1924, page 373, and August, 1924, page 626) the Mothers' Allowance Commission was abolished in 1924, its functions being taken over by the Child Welfare Division.

Reviewing the objects and the results of State aid in connection with child welfare the report states as follows:

"State aid for bereaved and dependent children, prior to 1916, had not been given anywhere in Canada, and in the United States only five years earlier. Such aid was the answer to a growing need for the intelligent and economic care of such children, and was to replace haphazard and inadequate private charity and its attendant loss to the community. State aid has not reduced or even affected, to any large extent, the number of inmates in our institutions. It is felt that it has, however, relieved to a much larger extent the overworked and inadequately paid widow and prevented undue strain and worry, ill-health and subsequent broken homes, due to the absence of the bread-winner of the family."

As indicating the need that has been met from the public treasury of the province for the care of dependent children since 1916, the report presents a tabular summary, which shows the total amount expended each year. In 1916, when this legislation came into force, the amount expended on behalf of neglected children and children in their own homes was $16,260, while in the same period the expenditure on behalf of dependent children in institutions was $19,000. In 1928, these amounts were $532,128 and $24,838, respectively.

Dealing with the methods employed to ensure the maximum effectiveness of the legislation in practical operation, particularly with respect to allowances granted to families of bereaved and dependent children, the report emphasizes the principles observed in administration—"careful inquiry into the needs and resources of the families being considered for allowances; aid given in accordance with the needs, and accompanied by other measures that may be necessary for the welfare and protection of the children; continued supervision of the families while they are receiving an allowance in order that public funds may not be wasted, and to make sure that children are receiving real benefit from the expenditure."

Bereaved and dependent children.—At the beginning of the year, 736 families were receiving allowances under this section of the Act. This number increased to 883 at the end of the fiscal year, April 30, 1928—a net increase of 16.65 per cent. For varying periods during the year, 967 families were assisted, these families containing a total of 2,986 children. Of the 967 families, there were 338 in each of which there were two children under fifteen years of age; 263 families with three children under fifteen; 160 families with four children under fifteen; 86 families with five children under fifteen; 39 families with six children under fifteen; 11 families with seven children under fifteen; nine families with eight children under fifteen; and one family with ten children under fifteen. There were 58 families with one child under fifteen. Of the total of 96 families where the allowance was discontinued during the year, it is noteworthy that 60, or 62.5 per cent became self-supporting; and 22 mothers, or 23 per cent were re-married. The total amount expended during the year for bereaved and dependent children was $460,548, plus $2,580 from trust funds deposited with the department.

Neglected children.—Under this classification there were 355 cases involving 766 children during the year ending April 30, 1928, as compared with 396 cases involving 866 children during the previous year. The causes which necessitated the services of the division in this field of activity were: parental neglect, desertion of parents or guardians, children born out of wedlock, ill-treatment, domestic trouble, orphans, illness, destitution incorrigibility, etc. The amount expended in connection with the work of temporary care of neglected children amounted to $13,349.

Other sections of the report deal with the work of the division in connection with the care of sub-normal children, children of unmarried parentage, and the problem of adopted children.

Credit is given to the various organizations whose close co-operation contributed to the administration of the Child Welfare Act.

BRITISH COLUMBIA MALE MINIMUM WAGE ACT

THE Male Minimum Wage Board, constituted under the Male Minimum Wage Act, 1929, of British Columbia, issued its first order under the new Act on January 22, as follows:—

ORDER ESTABLISHING A MINIMUM WAGE IN THE OCCUPATIONS OF STATIONARY STEAM ENGINEERS

Pursuant to the provisions of the "Male Minimum Wage Act, 1929" the Board constituted under the Act, having made due inquiry, and Mr. Cowan having filed his written reasons, hereby orders:—

1. That where used in this Order the expression "stationary steam engineer" means every employee engaged in the occupation of producing steam in a steam plant under the authority of a certificate of competency, as defined by section 53 (1) of the "Boiler Inspection Act", or who is in charge of, or responsible for, any steam boiler or engine while under steam-pressure, or in motion; and the expression "special engineer" means every such employee acting under the authority of a special certificate or a temporary certificate, as defined by the said section 53 (1) of the "Boiler Inspection Act".

2. (1) That subject to the provisions of section 6 of the Act, the minimum wage for every such stationary engineer shall be fifty cents (50c) per hour.

(2) That subject to the provisions of said section 6 of the Act, the minimum wage for every such special engineer shall be forty cents (40c.) per hour.

Dated at Victoria, B.C., this 22nd day of January, 1930.

J. D. MCNIVEN, *Chairman.*
GEO. H. COWAN,
ADAM BELL,

(Members of the Male Minimum Wage Board.)

Since its establishment under legislation enacted last year (LABOUR GAZETTE, June, 1929, page 607) the Board has considered applications from employees in three occupations in the province namely, steam engineers, taxi drivers and pharmacists (LABOUR GAZETTE, November, 1929, page 1318; October, 1929, page 1072). The application of drug store employees for an investigation was refused by the Board on the ground that the occupation of the applicants, being a "profession," did not fall within the scope of the Act, this opinion being later upheld by Mr. Justice Murphy in the British Columbia Supreme Court (LABOUR GAZETTE, November, 1929, page 1317).

Child Endowment in Australia

The difficulty of reconciling a child endowment scheme with a statutory living wage calculated on a family basis has given rise to controversy in New South Wales during the past two years.

A child endowment scheme was introduced in New South Wales in 1927, at the same time as the Industrial Arbitration (Living Wage Declaration) Act, which replaced the family unit of a man and wife and two children, formerly adopted as the basis for fixing the living wage, by a new unit of a family of man and wife only. Child endowment was intended to supplement the basic wage thus established. In June, 1927, however, the Industrial Commissioner, Mr. Justice Piddington, fixed the new basic wage at much the same level as that previously declared, but slightly increased in view of the rise in the cost of living, i.e. at £4 5s. (formerly £4 4s.) for industrial workers and £4 4s. for rural workers, mainly on the ground that the existing standard of living of the workers must be maintained. This declaration gave rise to a controversy as to the intention of the Living Wage Declaration Act. Employers contended that the basic wage should be reduced in respect of children, since child endowment had been intended to supplement the basic wage. The Industrial Commission, reconstituted so as to comprise three members, reconsidered the matter in 1929 and finally fixed a new and reduced basic wage at £3 12s. 6d. a week for industrial workers and £3 2s. for rural workers.

Mr. Justice Piddington strongly dissented from the point of view of the majority and declared the reduction to be a social injustice. The Commission as a whole recommended reconsideration of the legal basis of the living wage system and child endowment before the actual application of the new living wage. The Government refused to apply the new rate and is now considering the whole matter. The most recent proposals are to fix the living wage for a family of man, wife and one child, and to grant child endowment only in respect of children after the first. It is also being considered whether the system of financing child endowment should not be changed and the cost, which is now borne by the employers only, partly provided for by State contributions.

WESTERN DELEGATION DISCUSSES UNEMPLOYMENT WITH DOMINION GOVERNMENT

A Delegation mostly composed of representatives of western municipalities interviewed the Dominion government at Ottawa on February 26, for the purpose of presenting the facts as to existing unemployment and of seeking federal assistance in meeting the situation. The members of the Government who were present were the Right Hon. W. L. Mackenzie King, Prime Minister; the Hon. Charles A. Dunning, Minister of Finance; the Hon. Peter Heenan, Minister of Labour; the Hon. T. A. Crerar, Minister of Railways and Canals; the Hon. Charles Stewart, Minister of the Interior; the Hon. J. C. Elliott, Minister of Public Works; the Hon. Peter J. Veniot, Postmaster General; the Hon. James Malcolm, Minister of Trade and Commerce; the Hon. Dr. J. H. King, Minister of Pensions and National Health; the Hon. F. Rinfret, Secretary of State; and the Hon. P. J. A. Cardin, Minister of Marine. Mayor Ralph Webb, one of the representatives from Winnipeg, acted as chairman of the delegation, which included representatives from Port Arthur, Fort William, Winnipeg, Brandon, Regina, Moose Jaw, Saskatoon, Edmonton, Calgary and Vancouver, besides representatives of the Western Provinces Governments.

Resolutions of Winnipeg Conference

The delegates submitted a number of resolutions that had been adopted by a conference of municipal officers and others at Winnipeg in January on the subject of unemployment. These resolutions were as follows:

(1) That the federal and provincial governments be urged to again assume their share of the cost of unemployment relief, and that such assistance be on the basis of the Agreement entered into during the seasons of 1920-21 and 1921-22.

(2) That the Dominion Government reimburse the municipalities for all costs incurred by them in connection with the care of immigrants who have become public charges, and that deportation proceedings be completed as soon as possible.

(3) Urging the Dominion Government to proceed immediately with its extended building program including harbour improvement work, etc., with a view to providing winter employment.

(4) That the Dominion Government cancel all colonization agreements made with transportation, and other agents for immigration, and arrange that all placements of men and women be made through the Employment Service of Canada in order that men and women already in Canada shall have the first opportunity of accepting work which may be available.

(5) That the Government appoint an Economic Commission to make a thorough enquiry into the causes and remedies for unemployment throughout Canada with a view to discovering and recommending practical methods which might be followed to bring about a cure of the problem; And that in addition the Dominion Government be asked to put into immediate effect the remedies of the problem which have already been agreed upon, and to establish a permanent body to deal with the question.

(6) Endorsing the principle of unemployment insurance and recommending the calling of an inter-Provincial and Federal Conference at the earliest possible date for the consideration of the adoption of a Dominion-wide scheme.

(7) That the Federal and Provincial Governments and Municipalities be urged to provide such employment as may be undertaken by disabled ex-service men even though such employment be not productive of profit.

(8) That all public bodies be requested to give particular attention to the drafting of specifications and the wording of contracts in order that the construction of public buildings may be carried on during winter months.

(9) That the necessary steps be taken to provide that fair wages shall be paid for winter relief work, it having been brought to the attention of this conference that advantage is often taken of men out of work to reduce wages.

(10) That the Federal Government take into consideration their responsibility to provide work for the ex-service men, who by reason of their war service, find it very difficult to obtain work in the competitive labour market.

(11) Requesting the federal Government to establish a system of pensions for the blind.

(12) Inviting each province to send representatives on the delegation to Ottawa.

(13) The expenses of the conference to be defrayed by the municipalities and the provinces on a *pro-rata* basis.

(14) It was pointed out that a parliamentary committee of 1928 recognized "as one of the most serious situations confronting the country generally" what was referred as the prob-

lem of the "broken down or burned-out man" wholly or in part non-pensionable; and the Dominion Government was asked to provide:—(*a*) That to married men with dependents there be made a living allowance; (*b*) That for unmarried men, provision be made for their care and maintenance; (*c*) That such benefits be available only to men who by reason of age or disability wholly or in part non-pensionable are in necessitous circumstances and are unemployable in any available labour market; (*d*) That such benefits be restricted to men who have served in an actual theatre of war; (*e*) That all regulations be so framed as to prevent the benefits conferred being utilized in any way to bonus indolence.

Statement by Delegates

The delegates, representing various municipalities from the head of the Great Lakes to the Pacific Coast, gave an account of the employment conditions existing in their respective cities. The speakers included Mayor Webb and Alderman Simpkin, of Winnipeg; Mayor Gidden of Port Arthur; Mayor Darrow, of Fort William; Alderman Hughes, of Brandon; Alderman England, of Regina; Mayor Hair, of Saskatoon; Mr. Ross, M.P., representing Moose Jaw; Mayor Davison, of Calgary; Alderman Farmilo, of Edmonton; Alderman Atherton, of Vancouver.

Mr. E. McGrath, secretary of the Bureau of Labour, Winnipeg, representing the Province of Manitoba, read a resolution unanimously adopted by the Manitoba Legislature on January 31st, 1930, which urged on the Federal Government participation financially in measures undertaken to relieve unemployment within the province. Mr. McGrath stated that the province was this year prepared to spend $50,000 for the relief of unemployment within the province.

Mr. Campbell, M.P., representing the Government of Saskatchewan read a statement prepared in the interest of the province, tracing federal and provincial assistance in respect of unemployment relief in 1920, 1921 and 1922, and again in 1926. It showed that in the early months of the winter of 1929 the municipalities in Saskatchewan made representations to the province that unemployment was on a scale taxing the financial resources of the municipalities, and on the assumption that the Federal Government would assume a share of the cost, the province undertook to reimburse the municipalities to the extent of two-thirds of the excess cost of winter construction work undertaken solely for the purpose of giving employment to the unemployed.

Mr. Spencer, M.P., representing the Province of Alberta, stated that during the last eight years the relief of unemployment had cost the Government of Alberta about $20,000 a year. 1922 was the previous highest year when the cost was $83,278. 1929-30 would cost $393,000, $240,000 of which would be spent in brush cutting, 50 per cent of which would be collected from those for whose benefit the work was done. Making the deductions for this factor there would still be an expenditure of nearly $200,000 more by the Province of Alberta on unemployment than in any other year.

Mr. J. H. McVety, representing the Province of British Columbia, stated that through road work and other work the provincial government helped out the municipalities in the winter time. The problem was an annual one and what was really needed was a permanent solution with some permanent mechanism for handling the situation. The Vancouver problem was particularly acute, and owing to the transient nature of many of the unemployed there that city was really helping the other provinces. The Minister of Labour for British Columbia had stated that any proposal to meet unemployment in a permanent way would enlist his hearty synmpathy.

Mr. Kellner, M.P. (replacing Mr. Gardiner, M.P.), representing the Province of Alberta, described the provincial co-operative plan for unemployment relief by which the cities undertook to care for the married men and the province for the single men. Under this plan there were brush cutting contracts, consisting of work done for the farmers in clearing land, the farmers being given two or three years to repay the cost. Some of the brush cutting was being done on Government highways. When the work was being done to relieve unemployment it was all done by hand, and though the cost of doing it in this way in winter might be about the same as doing it in the same fashion in the summer time, machinery which would be used in ordinary circumstances would do the work much more cheaply.

Colonel La Fleche, President of the Canadian Legion, and Mr. Grant, President of the Unemployed Ex-Service men of Manitoba, presented the case of unemployed service men.

The Minister of Labour

Hon. Mr. Heenan expressed regret at having been prevented from attending the Winnipeg conference through illness. He was much impressed, he said, with the remarks made by the delegates regarding the advisability of finding a permanent solution of the unemployment problem, and also with the observations

submitted on the subject of immigration. He explained that in a statement he had made on December 16 (Labour Gazette, December, 1929, page 1326) he had not denied that there was unemployment, but had asserted that there was not the necessity for calling a conference on the subject in Canada such as had been held in the United States. To relieve unemployment he had suggested means of providing work, and in this direction the Federal Government had taken the initiative by speeding up its public works, and by encouraging the railways, especially the Canadian National, to give as much employment as possible. Much assistance was being given in these ways. If the provinces and municipalities had all followed the federal lead substantial assistance towards relieving unemployment would have been the result. He observed that none of the delegates had stressed unemployment insurance. The principle of unemployment insurance had been approved by a resolution of the House of Commons last session, but it was primarily a provincial problem. The Federal Government had asked the provinces for their views upon this subject. The Labour Department was ready to co-operate in the placement of returned soldiers not fully physically fit, but assistance from large employers was an essential in this matter.

The Prime Minister

The Prime Minister welcomed the delegation and promised that their suggestions would receive full consideration. It was important in these matters, he said, to get a true perspective rather than to be too much influenced by one particular set of conditions. At no time was any country ever without unemployment. With the possible exception of France, actual figures if available would show that the situation in Canada was better to-day than that in any other country in the world. There was, however, the perennial seasonal unemployment question, and in that respect most of what was said to-day might be said with regard to any winter. To show that this seasonal unemployment problem was a normal feature of economic conditions in Canada, he pointed out that in some trades, notably in the building trades, when wage rates were being adjusted, account was taken of the fact that employment was not plentiful in the winter time. A fairly large volume of unemployment in the winter was normal in Canada, as shown by experience. He assumed that the delegation, under the chairmanship of Mayor Webb, had been brought to Ottawa after careful consideration. There had been a preliminary conference at Winnipeg, wires had been sent to municipalities throughout the country, and provincial governments had been advised of the steps being taken by the municipalities. He felt he was right in saying that municipalities had been urged to be represented if possible in order to make the delegation representative. The delegates seemed to adopt the attitude of asking for relief for municipalities and provincial governments rather than for relief for the unemployed. The problem being primarily a provincial and municipal one, relief sought of the Federal Government was for the purpose of relieving the other two authorities of their financial strain. He pointed out that while the larger centres west of the head of the Lakes were represented, the smaller communities, both rural and urban, were not represented, and he ventured the statement that industrial conditions in those municipalities were not abnormal. Canadians should know the true situation in their country and should let the world at large know it as well. Encouragement for registration of the unemployed in the cities called attention to conditions existing there, and tended to emphasize their character, while in other municipalities lack of facilities for registration had a tendency to cause the problem to be more nearly overlooked. A few years ago when unemployment conditions developed in cities there was no thought of inducing all of the unemployed to register. If relief on a federal and provincial basis were given in some circumstances, it had a tendency to aggravate a previously existing unemployment situation. It must be admitted that this delegation presented the case for only a limited number of cities.

If municipalities within the provinces were more or less affected by unemployment, the Prime Minister continued, the proper procedure would be for them to first approach their respective provincial governments. This seemed to have been done in the case of some of the municipalities represented, and the provinces had either taken no action or practically no action. Speaking for the Federal Government, he and his colleagues had to take a broad view of the matter, reviewing the responsibilities not only of the municipalities, but of the provinces as well. He had sent Mayor Webb a letter clearly setting forth the Federal Government's attitude in the whole matter. It had been clearly stated that any province financially embarrassed by the burden of unemployment relief might appeal to the Federal Government. The invitations referred to by Mayor Webb regarding the proposed conferences had been sent to

all provinces. What replies had been received from Nova Scotia, New Brunswick, Quebec, and so forth? He read a telegram from Premier Taschereau of Quebec, the second largest province in Canada, in which it was stated that the Quebec unemployment situation was not abnormal and that in that province the provincial government left the matter of unemployment relief to the municipalities. What statement had Ontario made? Premier Ferguson in commenting upon the Prime Minister's letter had said that the unemployment situation in Ontario was spotty, and that the province proposed to assist municipalities by defraying one-third of the excess cost to municipalities in the matter of meeting the situation.

The Federal Government, Mr. King continued, had a right to expect proper representations from the provinces if they felt they needed assistance with regard to unemployment relief, such representations to come from the provinces themselves and from provincial Ministers. It was somewhat extraordinary that official representatives of the municipalities should come in the first instance to the Federal Government, rather than to their respective provincial governments. The Federal Government offered the provinces to assist where unemployment relief became unduly burdensome on proof of this fact to the Federal authority, but this offer had not yet been taken up. He repeated what the Minister of Labour had already said regarding the Canadian National Railways. More workers had been continued in employment throughout this winter on the railways, without adhering to strict business principles, in order that a slackening in this transportation industry would not aggravate unemployment conditions generally. Were the municipalities prepared to assist with this excess cost, he asked. In all schemes of unemployment relief co-operation on the part of public authorities was essential, whether money grants were passed around or not. He quoted the figures of the money spent by the Federal Government in giving financial aid to unemployed ex-service men (pensioners) during the present winter. The approximate amounts are, October, $4,000; November, $16,000; December, $48,000; January, $111,000 and February to date $88,000.

Unemployment in the winter time, Mr. King continued, was frequently the reaction after favourable employment conditions throughout the preceding summer. The provinces and municipalities were trying to relieve unemployment by extending public works; so also was the Federal Government. The Federal Government had difficulties regarding money, just as well as the provinces and municipalities, and its sources of revenue were likewise through taxation of the people. In addition, the Federal Government had responsibility to the people with regard to spending money raised in taxation, and this responsibility had to be discharged by seeing to the spending of federal taxes rather than handing the money over to the provinces for disbursement. The Ministers of Marine and Fisheries and Public Works could vouch for the fact that the Federal Government was spending additional money in order to carry out works during the present winter which would not have been gone ahead with at this season but for the unemployment situation. A form of unemployment relief but recently made effective was the Old Age Pension scheme, which next year would cost the Government of Canada in the neighbourhood of $6,000,000.

One matter which had been spoken of was that regarding a particular class of returned soldiers, "burnt out" cases. These were the most difficult problems in the field of unemployment for the several public authorities to have to deal with. However, the Federal Government now proposed to introduce a bill into Parliament to deal with these cases in a very real, very effective way, but this would mean more money from the Federal treasury. This scheme might be looked upon as a further contribution by the Federal Government for the relief of unemployment.

The provincial governments, the Prime Minister continued, had no financial responsibility, no financial strain, as a result of Canada's participation in the Great War. Over 40 per cent of all federal expenditures at the present time are traceable to Canada's share in the war. In the case of no provincial government could they show expenditures in excess of 1 per cent of their total due to the same cause. Why was it, he inquired, that the Federal Government was always looked to as a source of assistance when a slight strain developed? He quoted a telegram from Premier Tolmie of British Columbia. That province was not itself assisting the city of Vancouver, but it asked the Federal Government to assist regarding returned men and unemployment generally.

Mr. King suggested that relief of unemployment was all a matter of method. The delegation was asking for direct financial assistance, while the Federal Government was spending at the same time large sums of money to stimulate employment and to as-

sist in other ways in relieving unemployment. The Federal Government preferred accepting its own responsibility and carrying some share of the burden in this way through moneys expended directly by itself.

In reference to immigration, the Prime Minister observed that there was everything to be said for co-operation between the provinces and the Government of Canada. Three years ago the Government was severely criticized in the House of Commons and throughout the country for not inducing enough immigrants to come to Canada: now the criticism seemed to be reversed, and this situation pointed a difficulty of the problem. The provinces were in some cases responsible for immigration, and the day was approaching when the Federal Government would have to consider taking the attitude of bringing to Canada only the numbers of immigrants stated by the provinces to be desired. At the present time the Immigration Department had under review subsisting agreements with different parties on the question of immigration. The day of assisted immigration appeared to have passed. Differences mentioned by municipal representatives in connection with deportation proceedings were an administrative matter and it should be possible to overcome them without trouble.

In concluding, the Prime Minister said that if the question of unemployment was to be met properly in the future it would have to be by some practicable permanent scheme. Unemployment insurance must come. Employers and employed, the provinces and the municipalities might consistently get together and study the problem to see whether the scheme could be introduced. The Federal Government would be prepared to assist in any way possible in this regard. He suggested a Federal-provincial-municipal conference on the subject.

DOMINION LEGISLATION DESIRED BY THE RAILWAY RUNNING TRADES

THE following memorandum of proposed legislation was submitted to the Dominion Cabinet on February 25, 1930, on behalf of the Legislative Committee representing the Railway Brotherhoods, the delegation being composed as follows:—Mr. T. J. Coughlin, of the Brotherhood of Railroad Trainmen; Mr. W. L. Best, of the Brotherhood of Locomotive Firemen and Enginemen; Mr. Byron Baker, of the Brotherhood of Locomotive Engineers; and Mr. L. L. Peltier, of the Order of Railway Conductors.

The Dominion Government was represented by the Hon. Charles Dunning, Minister of Finance, who represented the Prime Minister in Mr. King's unavoidable absence; the Hon. Peter Heenan, Minister of Labour; the Hon. T. A. Crerar, Minister of Railways and Canals; the Hon. E. Lapointe, Minister of Justice; the Hon. F. Rinfret, Secretary of State; the Hon. C. Stewart, Minister of the Interior; and the Hon. P. J. Veniot, Postmaster General. The recommendations of the Committee were fully discussed, the government promising to give them careful consideration. The proposals were as follows:—

1. Amendment of the British North America Act so as to restrict the powers of the Senate to veto any bill passed by the House of Commons more than twice.

2. Expressing appreciation for the amendments to the Dominion Elections Act, passed at last Session substantially improving the facilities for voting at Advance Polls.

3. Suggesting the repeal of the Sales Tax legislation.

Unemployment Situation

4. Submitting the following resolution adopted by the Executive Committee, Canadian Legislative Board, Brotherhood of Locomotive Firemen and Enginemen, in January, 1930.

"Whereas, there has existed for some time past a very acute unemployment situation in most industrial centres throughout the Dominion, and whereas, the Municipal and Provincial authorities have been unable to cope with the situation in providing adequate food, clothing and warm shelter for those who through no fault of their own are unable to provide same; and whereas, in a matter of such grave importance to thousands of Canadian citizens, it is imperative that everyone must co-operate from the Federal authorities, through the Provincial Governments down to the Municipal bodies and the mass of the people as a whole, if untold suffering is to be avoided during the winter months, which can only be done by providing food and warm shelter for those so unfortunately placed; and whereas, the Federal authorities have been petitioned by various local public bodies where this condition is most aggravated to

render financial assistance and other aid and as yet have not seen their way clear to comply with such requests: therefore

"Be it resolved, that we instruct our chairman, if possible in conjunction with the representatives of the other train service organizations, to urge sympathetic consideration by the Government of the appeals being made by municipal authorities for federal assistance in coping with the present unemployment situation, and grant financial assistance wherever it is found to be warranted. Fully realizing, however, that any measures of this nature will only provide temporary relief and do not remove any of the fundamental causes of employment, we urge the Federal Government to exert every reasonable effort to secure the early adoption of an adequate system of Unemployment Insurance, such as has already been recommended by the Parliamentary Committee which enquired into the question during the past two or three years and with this end in view early steps should be taken to call a Dominion-wide Conference of representatives of the Provincial Governments with the object of formulating plans that will provide a scientific basis for an unemployment cure."

Scientific and Industrial Research

5. Submitting the following resolution:—

"Whereas, the Dominion Government has taken a progressive and commendable action in the enactment of the Research Council Act; and whereas, under this Act a National Research Council has been created to which has been added a number of Advisory Committees to deal with specially designated subjects; and whereas, the important and far-reaching responsibilities and duties assigned to the National Research Council will undoubtedly bring tremendous benefits to industry and the Dominion; and whereas, in the appointment of these Advisory Committees and the assignment of responsibilities and duties no cognizance has been taken of (*a*) the human factor in industry, (*b*) the regularization of employment and (*c*) the just apportionment of the wealth invested in and produced by industry; and whereas, the Act has been in operation but for a short time and these omissions have been an oversight, therefore

"Be it resolved, that favourable consideration be given by the Dominion Government to the inclusion in the responsibilities and duties of the National Research Council of a clause authorizing it to conduct scientific investigations into the human factor in industry; the regularization of employment; and the just apportionment of the wealth invested in and produced by industry; and be it resolved, that an Advisory Research Committee be established upon the above mentioned subjects and ample funds provided for their scientific investigations."

DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

Report for Year ending March 31, 1929

THE annual report of the Department of Pensions and National Health reviews its activities during the fiscal year 1928-29. This report is divided into four sections, respectively covering the operations of the pensions division, the Board of Pension Commissioners for Canada, the Federal Appeal Board, and the Health Division. Activities on behalf of disabled ex-service men are dealt with in the first three sections, while the report of the National Health Division details the operation of the Child Welfare Branch, and the result of investigations into drugs and food preparations, as well as the pollution of inland waters, hospitalization, and the supervision of public health in regard to railway and water transportation.

Regarding the hospitalization of ex-service men, the report indicates that the number of new admissions to hospital for the year ending March 31, 1929, was greater than in any year since 1922. The total number who received in-patient treatment during the year was 12,147, as against 11,030 in 1927-28. Treatments under the out-patient department also increased from 102,580 to 104,091. Of the number actually in hospital on March 31, 1929, 1,623 were in departmental hospitals, while 1,350 were in civilian institutions, making a total of 2,973. Veterans' care cases showed a steady increase, from 69 on March 31, 1928, to 115 on March 31, 1929, and to 176 at the date of publication. The work done in the Orthopaedic and Surgical Appliances Branch continued to expand, showing an increase in the number of limbs manufactured, and also a considerable increase in the minor orthopaedic appliances.

It is pointed out that the general work of the administrative, secretarial and medical services of the department had greatly increased, such increase being due chiefly to the legislation and recommendations of Parliamentary Committee of 1928 and to (1) the actual increase in the number of disability pensioners from 44,069, on December 31, 1924,

to 56,397 December 31, 1929; (2) increasing number of ex-soldiers asking for consideration in respect to the relationship of their present disabilities to service, and therefore requiring periods of observation in hospital and careful examinations by specialists of the department; and (3) advancing age of present pensioners.

As was the case last year, the total expenditure of the department shows a substantial increase, the exact amount of which is $2,203,969.70 of which $1,990,269.17 was in respect to new pensions. The total number of pensioners at March 31, 1929, was 54,620—an increase of 3,985 over the previous fiscal year. However, in the nine months succeeding March, 1929—i.e. to the end of December, 1929—the total of pensioners increased to 56,397.

Employment:—With reference to the assistance provided for disabled veterans in securing employment, the report mentions the co-operation in this matter with the Employment Service Branch of the Department of Labour of Canada and with the Montreal Rehabilitation Committee. The total number of employment placements of disabled veterans during the year was 11,307, as compared with 9,706 for the year previous. Of the total of 11,307 placements, 6,601 were in permanent positions. At the end of the year there were 2,126 registered as unemployed. Relief was granted during the winter of 1928-29 to 4,647 men. This relief was given 36,602 times, or an average of 7·88 times per man. The total actual expenditure for this purpose amounted to $367,231.

Dealing with the problem of sheltered employment and vocational training, the report states that the department operates Vetcraft Workshops at Halifax, Montreal, Toronto, Hamilton, Winnipeg and Vancouver, and the Canadian Red Cross Society operates one at Victoria under an agreement. In these, former members of the forces who had been classified as problem cases were given sheltered employment. The object of the shops is to study carefully the physical and mental condition of the man and to graduate him through different stages of work to a point where self-confidence and work ability are restored and he is able to accept employment in the outside labour market. Unfortunately, great difficulty is experienced in placing men outside, with the result that there is not the movement through the shops that there should be.

During the year under review special efforts were directed to make the benefits of sheltered employment more active, and 169 new cases were admitted and 133 discharged. On March 31, 296 men were on the strength. A more aggressive sales policy is being brought about, as an increase in sales would result in the employment of more men. It is found that the problem of operating these shops with substandard labour is very difficult, as many men have little remaining work value.

Vocational training was granted where it was considered beneficial, although the report observes that "the results of vocational training have been somewhat disappointing, but it is hoped that this measure will increasingly assist in placing industrial problem cases in permanent employment." On March 31, 1929, there were 24 men undergoing vocational training, while there were 14 men classified and employed as industrial problem cases.

Veterans' Insurance.—The reopening of the Returned Soldiers' Insurance in June, 1928, resulted in the receipt of 4,757 new applications up to the end of the fiscal year. These were since increased to a total number to date of 7,996. Of these, 803 were refused, as the applicants did not have a reasonable expectancy of life. The number of policies in force on March 31, 1929, was 27,473, as against 25,010 on March 31, 1928. This has since been increased to 29,675 as of November 1, 1929, in a total sum of $66,009,301.

Workmen's Compensation in Respect of Pensioners.—Under order in council, P.C. 558, 1928 (Labour Gazette, December, 1928, page 1,333) the Dominion Government assumes workmen's compensation liability for pensioners of 25 per cent disability rating and upwards who are suffering injury or disease as a result of an industrial accident. This provision with certain amendments was renewed by Order in Council P.C. 645, 1929, for a period of two years as from April, 1, 1929. During the fiscal year under review there was a reduction in the number of claims for reimbursement submitted by Workmen's Compensation Boards in respect of accidents to employees who are pensioners of 25 per cent and upwards. The number of individual cases in which the department accepted liability was 137, involving an expenditure of $19.672, as against 247 cases involving an expenditure of $69,968 for the previous year. In this connection, the report adds that "there is no way in which the number of claims, or their amount, can be governed, and already since March 31, 1929, the sum expended has been double that of the last fiscal year."

Marine Hospital Service.—In describing the functions of this work on behalf of injured or sick mariners the report points out that the Marine Hospital Service is operated in conformity with the provisions of Part V of the Canada Shipping Act (Sick and Dis-

tressed Mariners), chapter 186, Revised Statutes of Canada, 1927. All sick or injured mariners belonging to vessels that have paid the sick mariners' dues for the current calendar year are entitled to gratuitous treatment, if sent to a designated hospital or port physician in the provinces of Quebec, Nova Scotia, New Brunswick, Prince Edward Island or British Columbia, with a written recommendation from the master or person in command of the ship, endorsed as approved by the collector of customs.

The Department operates two marine hospitals for the care and treatment of sick mariners, one at Sydney, N.S., and the other at Lunenburg, N.S. At other ports provision is made as far as possible, for their care and treatment at contract prices at various local hospitals. Where there is no marine or designated hospital the collector sends the sick mariner to a port physician for medical or surgical assistance, and such other treatment as the case requires. When considered necessary, the sick mariner may be sent to the nearest public hospital, if there is one at convenient distance; if not, he may be sent to some public or private boarding house.

With certain exceptions, a duty of 2 cents for every ton which a ship measures, registered tonnage, is levied, not more than three times during each calendar year, on every ship arriving at any port in the provinces mentioned from any place out of Canada, or from a port in another province.

The net amount of the sick mariners' dues collected during the fiscal year was $236,807.95, and the expenditure incurred, not including, however, the cost of administration, was $222,094.67.

Sick mariners' dues were collected from 3,419 vessels, the 98,675 employees on these vessels being entitled to gratuitous treatment for sickness or injury for an average per capita cost of $2.25. The total number of sick mariners treated during the fiscal year was 5,751, and the number of days of hospital treatment was 53,079.

Child Welfare.—The report of the child welfare division deals with the various phases of activity administered by this branch. In regard to child labour it is stated that "efforts have been made towards securing the adherence of the provinces to the Geneva Child Labour Convention so that Canada might become a signatory to these." Reference is also made to the co-operative efforts with the Department of Immigration and Colonization in promoting the Family Re-union Scheme. The names and addresses of mothers and children coming to Canada under this plan were obtained and such mothers received letters welcoming them to the Dominion. Each mother was given an opportunity to receive the informative "Little Blue Books" published by this section of the department.

Under the heading of Eskimo Child Welfare, the report deals with the problem of saving these people from extermination, stating that: "Continued co-operation has again been requested and promised by the Department of the Interior. There are now only about seven thousand Eskimos left alive. Each month of the official year something has been done to point out to those responsible that a new policy is required to save the Eskimo from extermination. The mineral and other wealth of the Arctic and sub-Arctic is realized more than ever, but the fact that without the aid of the Eskimo this wealth is not available does not seem to be realized."

CANADIAN ENGINEERING STANDARDS ASSOCIATION

New Edition of Canadian Electrical Code

THE Canadian Engineering Standards Association has just published a second edition of the Canadian Electrical Code, stating the essential requirements and minimum standards governing electrical installations for buildings, etc. The first edition appeared about two years ago (LABOUR GAZETTE, February, 1928, page 156). The new edition contains much new material, including new rules covering motors. Many of the sections have been rearranged or condensed, rules governing garages and motion picture studios have been incorporated in the section on "Hazardous Locations"; and rules covering motion picture and projection equipment have been incorporated in the section on "Theatre Installations."

A list of the provincial electrical inspectors in provinces which have officially adopted the Canadian Electrical Code has also been added. An important feature is the list of the members of the Canadian Engineering Standards Association Code Committee and also of the members of the eight provincial committees and the different panels, showing that the preparation of the Code has been handled on a Dominion-wide basis.

The Code has now been officially adopted in the provinces of Nova Scotia, Quebec, Ontario, Saskatchewan, and British Columbia and there is every prospect that this adoption will be secured in the remaining three provinces in the near future.

The Canadian Engineering Standards Association was organized during the latter part of the war, at the suggestion of the British Board of Trade and the British Engineering Standards Association. This latter organization was the first central body to be established for the work of engineering standardization, having been founded in 1901. The main object of the association is to promote the establishment of industrial standards by providing an organization to receive requests for standardization, investigate their desirability and arrange for the formation of committees comprising representatives of both manufacturers and users to determine standards that will be acceptable to all interests concerned.

The Association operated until 1925 with funds provided by grants from the Department of Trade and Commerce of the Dominion Government, and by subscriptions received from various industrial firms and technical organizations. In 1925, however, on account of the imperative necessity for economy, the grant from the Department of Trade and Commerce was withdrawn, but the National Research Council of Canada, realizing the importance of the work being carried on by the Association, made arrangements to guarantee the budget, with the understanding that special efforts be made to obtain financial support from Canadian industry.

The Association has published also standard specifications for steel railway bridges; for single-phase distribution transformers; for galvanized telegraph and telephone wire; for wire rope for mining, dredging and steam shovel purposes; for Portland cement; for steel highway bridges; for flexible steel wire rope and flexible strand for aircraft purposes; for reinforcing materials for concrete; for tungsten incandescent lamps; for galvanized steel wire strand; for railway wire-fencing and gates; for reinforced concrete poles; for Eastern cedar poles; for steel structures for buildings; for stove bolts; for movable bridges; for control cable for electrical power plant equipment; for concrete and reinforced concrete; for sampling for check analysis of steel billets, bars and shapes; for carbon steel billets and bars of forging quality; for commercial-quality hot-rolled bar steels; for commercial cold-finished bar steels and cold-finished shafting; carbon steel castings, etc.

PENSION PLAN OF HYDRO ELECTRIC POWER COMMISSION OF ONTARIO

THE insurance and pension scheme of the Hydro Electric Power Commission of Ontario, was made effective by a provincial Order in Council on October 9, 1929, which reads as follows:—

Upon consideration of the application of the Hydro Electric Power Commission of Ontario, and upon the recommendation of the Honourable the Prime Minister, the Committee of Council advise that Your Honour may be pleased to approve of the said Commission entering into an agreement, a copy of which is hereto attached, with the Confederation Life Association on behalf of the following municipal authorities to provide insurance benefits for employees of the said municipal authorities in accordance with the provisions of the Power Commission Insurance Act, 1927, chapter 21, 17 George V: London, Windsor, Hamilton, St. Thomas, Kitchener, St. Catharines, Chatham, Stratford, Walkerville, Ottawa, Lindsay, Galt, Owen Sound, Niagara Falls, Orillia.

It is understood that from the date of this Order up to the end of January, 1930, twenty-two municipalities had adopted the pension system.

Hon. I. B. Lucas, general solicitor for the Hydro Electric Power Commission, in a recent statement, pointed out that the new Municipal Pension scheme operates under The Power Commission Insurance Act, being Statutes of Ontario, 1927, chapter 21. The Municipal Authorities authorize the Provincial Commission by the execution of an agreement to contract with the Life Insurance Companies on their behalf. The risk is therefore underwritten by the Insurance Company and the premiums are paid from a fund made up of level percentage contributions made by the employees and the Municipal Commissions. There have been no rules and regulations drafted. It is just possible that there will be none as the agreements and policy contract cover the matter in detail. Any rules and regulations would probably only deal with matters of routine.

About eight months before the scheme became effective Mr. Lucas detailed its provisions at an address given before the 1929 convention of the Ontario Municipal Electrical Association. The information given in

that address forms the basis of the following paragraphs.

By the authority conferred upon it under the Power Commission Insurance Act, 1927, the Commission has power to enter into an agreement with any municipal hydro commission to contract with an insurance company on behalf of the local commissions for death benefits and superannuation allowances to the employees of such commissions. A committee, consisting of a representative of each of the municipal commissions, was appointed to investigate and report on a scheme or type of policy for adoption by the Ontario Commission. This committee met from time to time and considered various proposals and types of insurance contracts; tenders were called for from various insurance companies and finally a joint proposal, made by the Confederation Life Association, the London Life Insurance Company and the Mutual Life Assurance Company of Canada, was accepted by the committee and recommended to the commission for adoption. This proposal as originally recommended was finally adopted by the Commission after various conferences with the Municipal Committee. One of the chief problems to be met was whether each municipal commission should be considered as a separate and independent unit without any connection or interest in or with the other municipal commission, or whether all the local commissions should be grouped. It was finally decided that the group principle should be adopted, and accordingly the necessary contract to bring the scheme into effect was completed at a joint meeting between the committee and the commission.

Benefits.—Provision is made for the inclusion (without medical examination) of all the present employees of each local commission that enters into the scheme, under a policy that entitles each employee to a pension for life on retirement, a death benefit, and certain rights on leaving the service. The normal age for retirement is 65, but provision is made for retirement from age 55 to age 70. Pensions for retiring at 60 are about one-half and for those retiring at 70 somewhat larger than the normal pension at 65.

As an illustration of the pension allowances, two typical cases are given as follows:—

1. Mr. "A" enters a service at age 25 at a salary of $1,200 a year, or $100 a month, he continues in the employment of the municipal commission at the same salary until age 65, when he retires on pension—This Mr. "A" at the age of 65 will be entitled to a total retiring allowance of $81.43 per month.

2. Mr. "B's" present age is 50. He has served for 30 years and has completed 18 years of service since 1910. His present salary is $3,000 a year or $250 a month. He continues in the employment of the municipal commission and when at 65 he retires on pension he will be entitled to $96.18 a month.

In case of death during employment, there is paid as a death benefit an amount ranging from one to one and a half years' salary, according to length of service. After 20 years of service an employee can take with him the right to the benefits already purchased for him by the municipality.

Cost to Municipality and to Employee.—In order to take up the accrued liability for past services of old employees the municipal commission is required to pay an amount not exceeding 1¼ per cent of the present pay-roll for 30 years, and for the future services the municipal commission must pay five per cent of each year's pay-roll. Each present employee of the commission, young or old, will be required to contribute 2½ per cent of his monthly salary to the upkeep of the scheme, and future employees entering the service over age 25 will be required to pay in addition to this 2½ per cent an additional percentage to cover the extra cost by reason of the increased age, and no future employees over the age of 45 can be admitted to the scheme. In concluding his address, the Hon. Mr. Lucas said: "In my judgment public opinion will not justify big industry or business 'scrapping' old time employees and leaving them to the support of relatives or public charity, and much less will public opinion justify public utility commissions scrapping their worn out employees without making some provision for them. As a matter of fact public commissions realizing the trend of public opinion do not usually scrap their old time employees but try to take care of them by keeping them on jobs where they are no longer efficient. It looks like better business to do it under a sound pension scheme."

The Select Standing Committee of the House of Commons on Industrial and International Relations was appointed on March 4, the members being as follows:—Messieurs T. Bell (Saint John-Albert), E. D. R. Bisset, Hon. W. A. Black (Halifax), Henri Bourassa, E. R. E. Chevrier, T. Church, D. J. Cowan, H. Deslauriers, C. E. Ferland, T. Gervais, R. W. Grimmer, W. A. Hall, Hon. P. Heenan, C. B. Howard, R. H. Jenkins, L. W. Johnstone (Cape Breton North-Victoria), E. Lacroix, J. E. Letellier, I. D. Macdougall, (Miss) A. Macphail, P. McGibbon, C. R. McIntosh, T. McMillan, Hon. J. Malcolm, W. S. Murphy, A. W. Neill, Sir G. Perley, J. E. Prevost, E. C. St.-Père, T. H. Stinson, J. T. Thorson, Hon. P. J. Veniot, Hon. R. S. White (Mount Royal), J. S. Woodsworth, N. M. Young (Toronto Northeast).

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Accident Prevention in Manitoba

"SAFETY-FIRST cells" are to be organized in many of the industrial establishments in Manitoba as the result of a meeting held at Winnipeg on February 12 under the auspices of the Industrial Accidents Division of the Accident Prevention Bureau of the Winnipeg Board of Trade. The meeting was attended by representatives nominated by the various groups of industries in the district, and by representatives of the Provincial Bureau of Labour, and of the Winnipeg Trades and Labour Council, who all promised the support of their various organizations for the new movement. The "Safety-First cells" will comprise a safety director and a committee of three to ten workmen. The chairman, Mr. Charles F. Roland, pointed out that there were 25 groups into which industry in the province had been divided. The average number of firms in each group was ten, and if the committees established in each plant averaged five, there would be in existence a working committee of 1,250 men directed to the task of eliminating accidents.

Proposed Spray-Painting Rules

The Alberta Federation of Labour, in its memorandum of proposed legislation submitted recently to the provincial government (LABOUR GAZETTE, February, page 184) made the following recommendations in regard to spray-painting machines:—

In view of the fact that the spray-painting machine has now become a permanent factor in the painting industry and the danger of lead poisoning is greatly increased by reason of the worker breathing poisonous vapours, we are requesting that the following regulations be put in force covering the operation of these machines:—

1. That no person under the age of eighteen years be permitted or required to operate any device for spray painting by compressed air.

2. No person operating a device for spray-painting by compressed air shall be required or permitted to work longer than eight hours in any twenty-four.

3. No person operating a spray-painting device by compressed air shall continuously operate same longer than fifty minutes in any one hour, remaining ten minutes to be spent in the open air.

4. That all persons operating a spray-painting device by compressed air shall be examined and passed upon by a physician as medically fit, and examinations shall be periodically maintained at intervals of not longer than three months, the expense of such examination to be borne by the employer.

5. All persons permitted or required to operate a device for spray-painting shall be supplied with a breathing device, connected by a separate air tube with the air pressure device at a point, back of the point at which the pressure of air begins to convert the paint into spray.

6. No person shall be required or permitted to use any paint, lacquer, varnish or vitreous enamel in a spray painting device, unless the container is clearly marked showing the maximum content of lead, benzol or free silica, as the case may be.

7. That when the operator of a device for spray-painting by compressed air is doing interior work, a current of fresh air having a velocity of 250 linear feet per minute, at the surface being sprayed, uncontaminated by lead, benzol, vapour, or silica dust, shall be maintained from the rear of the person operating the device.

8. No open windows or other neutralizers shall be permitted between the entrance of the current of fresh air and the surface being sprayed which would lessen the velocity of the current of air carrying away the lead, benzol, vapours, and silica dust, from the operator to the exhaust.

9. That an exhaust ventilation system shall be installed and be continuously in operation at all times during operations.

10. That the illumination of the surface to be sprayed shall be such that the greatest amount of illumination shall come from above the surface to be sprayed or from the rear of the operator.

11. Any person who violates any of the provisions of the Act shall be guilty of a misdemeanor and subject to the penalties prescribed.

12. That the employer or his agent shall in every case be held responsible for the observance of the provisions as heretofore described.

Good Safety Record in Border Cities Industries

Eighteen factories in Border Municipalities and Essex County in Ontario went through 1929 without accidents, according to a report presented at a recent meeting of the Essex and Kent division of the Industrial Accident Prevention Association. Banners were presented to the 18 factories having unbroken safety records. Five of these factories received the banner for the second time. There are 347 plants in the association in the Border and county and 113 in the district. Three fatalities were reported for the year, two of

them in Kent County. Total accidents were reported as 1,262 as compared with 1,148 in 1928.

The "Safety Man" in Industry

The Province of Quebec Safety League recently issued Safety Leaflet No. 24, describing "the safety man's rôle in industry." The functions of such an official are stated to be as follows:

In all matters concerning safety, the safety man acts and speaks for the management. He investigates all accidents or near accidents and suggests the steps to be taken in order to prevent similar accidents. He keeps accident records and prepares such reports as may be required by the Compensation Commission or by insurance companies. He takes the means of encouraging the workmen and foremen to make safety suggestions and to co-operate with the safety organization. He does personally the inspection of the plant and the machinery and keeps a written record of these inspections. He may organize fire prevention campaigns and fire drills. Where it is possible, the safety man should check up all plans and specifications for new equipment, in order to make sure that all safety devices are included for the protection of the employees. He organizes safety meetings, safety contests, sees to it that new men be trained to work safely and be not put to dangerous tasks before they are so trained. He supervises the safety bulletin board services and co-operate with outside safety organizations.

Cost of Accidents in Planing Mills

At the annual convention of the Canadian Lumberman's Association, held at Ottawa in January, the report of the Workmen's Compensation Committee was presented by its chairman, Mr. J. B. Mackenzie, giving particulars of the operation of the Act in regard to planing mills in Ontario.

"A few comparative figures for the year 1928, the last year that class 4 will be tabulated separately, are as follows: number of accidents involving payment, 910; permanent disability accidents 131. Deaths due to accidents, 2; total days lost, 15,109. Average days lost per accident, 18.43. Average age 36·6. Average weekly wages $19. Total cost for all accidents in this class $148,439.25. Average amount paid out for each accident, $115.75. The average cost of each accident was $115.75. Several of your men may have slight accidents and you compare the small payments they received with the larger payments you make to the Board, and without thinking, say that you get no return for what you pay in. I would have you remember that you are helping to pay for one of these death claims, for one who was an employee of a small lumber dealer, and also that the Compensation Board will have to make monthly payments to this widow and children, amounting to some $14,000 before this man's children will be of age, or the widow not needing support. If there had been no Compensation Board and this family had been awarded this sum from this dealer, it would have meant bankruptcy for him. Saw accidents for 1928 in class 4 were 609; permanent disability accidents in this class, 175; planer, jointer and shaper accidents, 133; permanent disability accidents from this class, 52.

"Regarding the practice of many doctors to make much of a small accident, so as to run up a bill, thinking that the government pays, I would advise members to acquaint these doctors with the fact that these payments are charged against the industry itself and not the people as a whole. The year 1927 is the last year in which I could get tables showing the amount paid to doctors. The total amount collected from our class was $163,469.25. And the amount paid out to doctors was $25,738 or about one-sixth of the amount of your assessment."

Accident Prevention in South Africa

The last annual report of the Chief Inspector of Factories of the Union of South Africa describes some of the measures taken in South Africa for the prevention of industrial accidents as follows:—

In the year 1925 the Factories Division, with the assistance of the Department of Union Education, inaugurated a system of instruction in safety practices in the Trade and Industrial Schools and Technical Colleges. Brochures dealing with safety precautions for wood-working and transmission machinery and the handling of lead were prepared and distributed to the various schools and colleges for instruction purposes.

In order to carry the matter still further, the Department of Labour is making an endeavour to secure the co-operation of the Industrial Councils, which have been formed by the different industries under the Industrial Conciliation Act. In the majority of cases the Councils are well organized, with full representation of employers and workers and can be said to be imbued with a spirit of compromise to work for the benefit of the industries concerned. It is felt that once the principle is accepted generally, the need and usefulness of a national movement will be appre-

ciated. It is held that the advantage to be gained by following this line is that the national movement will have a natural growth, well rooted in a conviction as to its necessity and usefulness. Meetings have been held with most of the Councils during the year and it is possible to report that considerable progress has been made.

Industrial Accident Statistics in New Zealand

The "Statistical Report" of New Zealand for the year 1927 recently published, includes an account of the methods followed by the statisticians of the Dominion in recording industrial accidents. The calculation of frequency rates is described as follows:—

"Because a difference in hours worked entails a difference in industrial risk the number of accidents occurring in a given time per 1,000 employees cannot be regarded as a satisfactory basis on which to compare the frequency of accidents in different industries. For the purpose of computing frequency rates in New Zealand, data as to the number of employees in factories coming under the heading of various industries have accordingly been compiled in the Census and Statistics Office from returns furnished for the purpose by the Labour Department's Inspectors of Factories; while information as to the hours worked has been ascertained from the awards, and supplemented by the statistics of short time and overtime worked available from the annual census of factory production taken by the Census and Statistics Office. Data on similar lines have been supplied by the other Departments concerned. Taking one hour's work performed by one man as the unit, and calling this unit a "man-hour," it is then a simple matter to find the total number of man-hours worked in each industry, enabling frequency rates of industrial accidents to be computed on the basis of number of accidents per 100,000 man-hours worked each year. In many cases differences between frequency rates for the different industries are not significant beyond the first decimal place."

Social Policy in Germany

It is anticipated that a number of important measures of social policy will be enacted in Germany during 1930.

The Labour Protection Bill, which was referred to the Committee on Social Policy after a first reading in the Reichstag, will probably be passed this year. This measure will improve conditions as regards safety in factories, hours of work, protection of women and young persons, the Sunday rest, shop closing hours and factory inspection. The Labour Protection Bill will be supplemented by the Bill relating to labour in mines, which has been submitted to the Social Policy Committee of the Federal Economic Council, and will probably receive its final reading during the spring.

Revised regulations relating to the mercantile marine and a Bill relating to domestic servants are also under consideration. A Bill relating to collective agreements is being drafted. A report on conciliation procedure and a report on the results of the Works Councils Act will be published shortly.

As regards insurance and relief, various improvements are projected. The provisions of the workmen's compensation legislation relating to accident prevention will be reinforced and applied to prison labour. The system of workmen's compensation will also be extended so as to cover a large number of occupational diseases. Regulations covering the use of white lead in painting are at present before the Reichsrat. Scientific inquiries into accident prevention and vocational hygiene respectively are under way. A Bill for the extension of the system of commercial employees' insurance will be brought before the Reichstag. A number of innovations recently introduced in the sickness insurance system for purposes of economy will be extended to other branches of social insurance. As regards the assistance of persons disabled in the war, the difficulties hitherto experienced on account of the financial position of Germany have now been overcome.

Unemployment insurance, however, continues to present a serious problem. Productive methods of unemployment relief will be extended during 1930 so far as the financial resources of the country permit. The Minister of Labour has also requested the various Government departments to take account of seasonal and cyclical fluctuations in the placing of contracts.

A Bill relating to vocational training, dealing mainly with the regulation of apprenticeship, will shortly come before the Reichstag Committee on Social Policy. This Bill is considered specially important on account of the decline in the number of young persons due to the low birth rate during the war.

As regards housing, Bills will be introduced in the Reichstag providing for the grant of State subsidies for the housing of agricultural workers, and containing rules for the utilization of the credits granted.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Agenda of the Fourteenth Session

THE Fourteenth Session of the International Labour Conference will be held at Geneva, Switzerland, opening on June 10, 1930, the agenda being as follows:—

1. Forced labour.
2. Hours of work of salaried employees.
3. Hours of work in coal mines.

The first two of these questions came before the International Labour Conference at its twelfth session in May-June, 1929, when questionnaires were agreed upon for submission to the different member states of the International Labour Organization. The question of hours of work in coal mines was added by the Governing Body of the International Labour Office at a session which was held in the first week of February.

Hours of Work in Coal Mines

The decision of the Governing Body of the International Labour Office to submit the problem of hours of work of miners to the next session of the International Labour Conference was not reached without considerable discussion and some conflict of argument. The main point of controversy was whether, seeing that the problem is one which concerns, primarily and directly, the coal-producing countries of Europe, it could usefully or properly be dealt with by a general meeting of the International Labour Conference, in which the majority of delegates would be representatives of extra-European or non-coal-producing countries. Members of the Governing Body representing different interests, and notably those from countries overseas, contended that as the Preparatory Technical Conference on conditions of employment in coal mines had been confined to nine countries of Europe, the countries which did not take part in that Conference could not rightly be called upon to proceed with the task that Conference had begun, or, alternatively, to be bound by any Draft Convention which might result from the study of its conclusions. The constitutional aspects of this question were discussed at some length. Further, it was argued by some speakers that the situation in the coal-mining industry was no longer so acute as when the Preparatory Conference was first suggested; that the findings of that Conference were fragmentary and inconclusive; and that further investigation was needed before the matter could be considered ripe for action. Resolutions embodying these views were presented, but were either rejected or allowed to fall, the final decision of the Governing Body taking the form of the following resolution, moved by the British Government representative and adopted by 15 votes to 5:—

"The Governing Body decides to place upon the agenda of the 1930 International Labour Conference the question of the hours of work in coal mines; and invites the Conference, in framing a Convention, to take into special consideration not only the resolutions adopted by the Preparatory Technical Conference but also the fact that the question has been raised entirely as a European one, and that the information necessary to enable its consideration to be extended to overseas coal mines has not been sought and will not be available to the Conference."

Britain to Adopt the Eight-Hour Day Convention

It was announced by the representative of the British Government in attendance at the meeting of the Governing Body of the International Labour Office in Geneva on February 4-8 that the British Government was working actively on its plan for ratification of the Washington Convention on hours of work and that before the next session of the International Labour Conference took place, active indication of British legislative effort in this matter would have been exhibited to the world.

Germany to Adopt Eight-Hour Day Convention

It was announced at the session of the Governing Body of the International Labour Office on February 4-8, by the Government representative for Germany, that consideration of the Bill for ratifying the Washington Hours Convention without reservations or conditions was proceeding normally in the German Parliament and that it might be hoped that ratification would result shortly.

Italy to Adopt Eight Hour Day Convention

The Italian Government, at a meeting held February 12, approved the draft of a Bill relating to the regulation of hours of work in industrial undertakings. The Bill contains provisions which are in conformity with the principles laid down by the Washington Eight Hours Convention, and at the same time take account of the requirements of production and economic conditions in Italy. The object of the Bill is to put Italy in a position to give up the reservation relating to ratifi-

cation by other countries, by which her own ratification was conditioned, and thus to honour her international obligations. Italy's ratification of the Hours Convention, it may be recalled, was accompanied by the condition that the observance of the Convention should date from its ratification, without reservations or differing conditions, by Belgium, France, Germany, Great Britain and Switzerland. Other conditional ratifications include those of France, which is contingent on ratification by Germany and Great Britain, and of Spain, which is contingent on those of France, Germany, Great Britain and Italy.

If, as a result of the step now announced, Italy is able to withdraw her reservation and to declare her ratification to be unconditional, her action cannot fail to stimulate the movement towards ratification by other countries. Belgium and Czechoslovakia have ratified unconditionally, Italy is contemplating the same course, and France is waiting only for ratification by Germany and Great Britain. Thus ratification by the two last-mentioned countries would ensure enforcement of the Convention in at least six of the principal industrial countries in Europe, and their example might well be expected to influence others.

No Maritime Session in 1930

It was decided at the February session of the Governing Body of the International Labour Office that no Maritime Session of the International Labour Conference should be held in 1930. This year there will be one general session of the Conference which will open on June 10. The second discussion of maritime questions which were considered at a Maritime Conference held in Geneva in October last, will take place in 1931 under conditions which the Governing Body will determine at its next session in April. The International Labour Conference will have in any case to examine in 1931 the decennial reports on the application of the Conventions adopted at Washington and Genoa which came into force in 1921. It will also have to consider the report on wages in the coal mining industry. Furthermore, the Governing Body has decided to place on the agenda of the 1931 session the question of the age of admission of children to non-industrial occupations.

Conditions of Work in the Textile Industry

The Governing Body of the International Labour Office, at its meeting in February, examined a report of the Committee on the Conditions of Work in the Textile Industry. This Committee was set up to establish the program of the enquiry of the International Labour Office into conditions of work in the textile industry in various countries. It met on two occasions, in June and December, 1929, and elaborated very complete proposals.

In accordance with these proposals the countries in which the enquiry will be made will be: Austria, Belgium, Brazil, Canada, China, Czechoslovakia, Estonia, France, Germany, Great Britain, Hungary, India, Italy, Japan, Mexico, the Netherlands, Poland, Rumania, Spain, Switzerland, United States and Yugoslavia.

The study of the International Labour Office will deal in the first place with the cotton and wool industries, and later the artificial silk weaving industry will be covered. In order to collect the necessary data the International Labour Office will address a questionnaire to the Governments, this being the best means of obtaining comparable data. The questionnaire will consist of two parts. The first of these will deal with statistics of wages and hours of work. The second will deal with methods of regulation of hours of work, the regulation of wages, family allowances, social insurance contributions and, finally, the number of workers and the size of the organizations covered by the questionnaire.

The report of the Textiles Committee was adopted by the Governing Body. The Governing Body then invited the Office to deal with the next stage of the procedure. This would be the sending to the Governments of the report and the questionnaire, together with a letter asking the Governments to make suggestions for improving the questionnaire. The Governments would be asked to estimate the approximate number of establishments existing in each branch of the textile industry and also the approximate number of establishments from which they hoped to receive the data on the basis of which they would furnish the International Labour Office with the information asked for in the report.

The Governments are also to be informed that the replies to this letter will be submitted to a further meeting of the Textiles Committee, so that a report may be made to the Governing Body, which will then decide if the arrangements agreed upon are sufficient to enable the Governments to be asked to proceed with the enquiry in their countries.

Committee on Salaried Employees

The Governing Body of the International Labour Office at its last session in February settled the composition of the Advisory Com-

mittee on Salaried Employees which it decided to set up at its Session held last June. This Committee will serve as a body for consultation by the salaried employees' professional groups on questions which are of particular interest to them. It will be the channel through which these groups will formulate their wishes to the Governing Body with a view to examination by it. It will consist of 12 members representing employees, 3 members of the Governing Body and 2 members representing employers.

Great Britain and the Organization

In the British House of Commons the President of the Board of Trade stated on January 21 that the policy of the Government was to approach the subject of safeguarding British labour conditions against unfair foreign competition and goods made from sweated labour by way of international discussion, and that they would continue to take every opportunity to promote international agreement on labour standards. He stated that the International Labour Office had already concluded an enquiry into working conditions in the coal-mining industry, and a technical conference of the chief coal-producing countries of Europe had recently been held at Geneva to explore the possibilities of reaching international agreement in regard to hours, wages or other conditions of work in coal-mining. A committee had also been set up by the International Labour Office to conduct an enquiry into conditions in the textile industry. His Majesty's Government, he continued, had taken an active part in the coal enquiries and was giving every assistance to the textile enquiry. Exceptional steps for expediting the former were taken on the special representation of His Majesty's Government at the last meeting of the Assembly of the League.

"Vocational Education in Agriculture"

Under the above title the International Labour Office has just published a survey of vocational education in agriculture in thirty-two countries representing all parts of the world. The information is based mainly on the answers received from the thirty-two countries covered, to a questionnaire drafted by the International Labour Office in collaboration with the Mixed Advisory Agricultural Committee of the International Labour Office and the International Institute of Agriculture in Rome. Additional data have been derived from the reports communicated to the Office by those States which have accepted the Recommendation concerning the development of technical agricultural education adopted by the International Labour Conference at its Third Session (1921).

The first of the two parts into which the Report is divided contains a general survey on an international basis, including a description of vocational agricultural education, its organization and character, its main divisions and the methods and technique employed, a discussion of certain special problems and some remarks on the results obtained and possible future developments. The second part consists of surveys of the existing systems in the various countries.

The section dealing with Canada indicates that no general law regulates the whole system of agricultural education in this country but that vocational education in agriculture is dealt with by the different provinces. Mention is made of a Federal law which was adopted in 1913 granting financial aid to agricultural instruction. The publication points out that the broad lines of agricultural education are nearly the same throughout Canada though it has its peculiar feature in each province. Some aspects of agriculture are as a rule taught in the elementary schools and agriculture is at least an optional subject in many secondary schools, but the centre of efforts is the Provincial Agricultural College and a feature of the national system is the attention given to extension methods which are largely in the hands of local agricultural "representatives" employed by the Provincial Departments of Agriculture to work in close co-operation with the colleges and to advise the farmers of the different districts. The report goes on to deal in some detail with elementary and secondary agricultural instruction in the different provinces and with agricultural schools and colleges, also with agricultural extension work, including the appointment of agricultural "represenatives," short courses of instruction, railway demonstration trains, farm boys' camps, school fairs, boys' and girls' clubs, agricultural associations and women's institutes. Mention is also made of the system of Dominion Experimental Farms and illustration stations.

The Legislature of British Columbia on March 4, unanimously adopted a resolution declaring that "this Assembly is of the opinion that the Government should, as soon as possible, confer with the Urban and Rural Municipalities Associations with a view to proclaiming the 1926 amendments to the Mothers' Allowance Act, which provided for the payment of assistance to mothers whose husbands are incapacitated by illness."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on February 1, was 7,062, their employees numbering 971,774 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,772, having an aggregate membership of 211,811 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of February, 1930, as Reported by the Employers

There was a slight increase in employment at the beginning of February, although the situation was still affected by inventory shutdowns, and also by continued seasonal slackness in the out-of-door industries which were seriously retarded by the unusually cold weather prevailing at the beginning of the month, particularly in the Western provinces. Employment was, however, in rather greater volume than on the same date in 1929 and was considerably more active than on February 1 in earlier years of the record. The Dominion Bureau of Statistics tabulated returns from 7,062 firms, whose staffs aggregated 971,774 persons, as compared with 967,996 on January 1. This increase, which was rather less extensive than on the same date in the two preceding years, caused the index to stand at 111·6, while on January 1, 1930, it was 111·2 and on February 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 110·5, 102·0, 96·6, 91·8, 87·1, 91·7, 90·6, 79·9 and 91·2, respectively.

Pronounced recovery was shown in manufacturing. Logging, mining and services also reported improvement. On the other hand, there were important seasonal declines in trade, construction and transportation.

Employment by Economic Areas

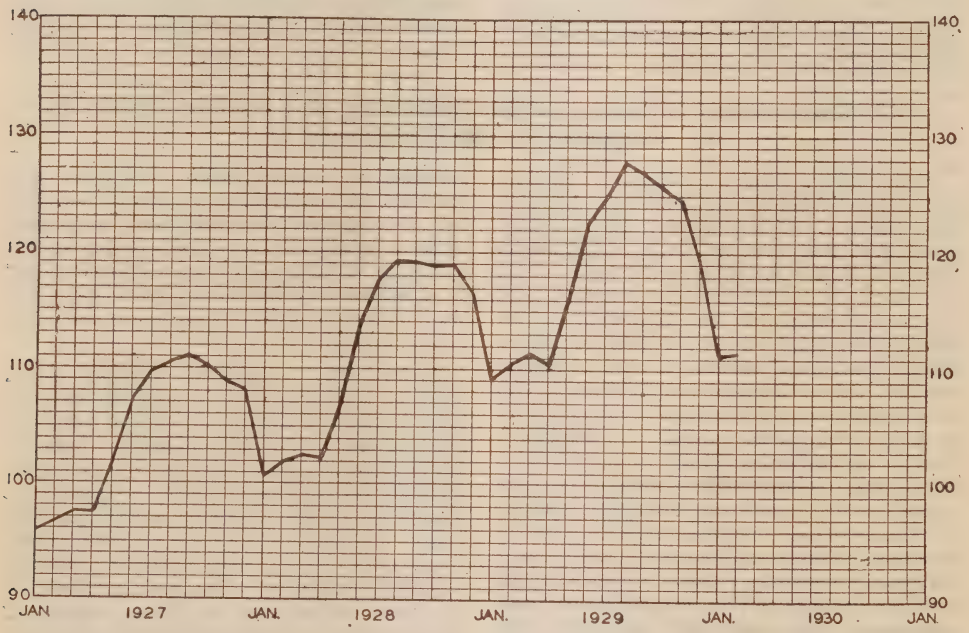
Reductions were recorded in the Maritime and Prairie Provinces, while elsewhere the tendency was upward.

Maritime Provinces.—Construction, transportation and trade reported a falling-off in the Maritime Provinces, where mining and manufacturing were brisker. Shipping was still affected by the grain congestion. Statistics were received from 526 firms, employing 75,234 workers, compared with 76,341 at the beginning of January. Moderate gains had been indicated on the same date in 1928, but the index then was between seven and eight points lower.

Quebec.—The recovery in Quebec caused the reinstatement of a smaller number of workers than on February 1 of last year, but employment was then in smaller volume. Manufacturing (particularly of iron and steel, textiles, lumber and electrical apparatus), showed much improvement, as did also logging. On the other hand, transportation, construction and trade recorded decided seasonal curtailment. The working forces of the 1,648 co-operating employers aggregated 273,400 persons, as against 271,343 in their last report.

Ontario.—Important gains were made in manufacturing, notably in the iron and steel, textile, lumber, non-ferrous metal, leather and tobacco, distilled and malt liquor divisions. Services also reported heightened activity, while there were seasonal reductions in trade and construction, and logging and transportation also released employees. According to data received from 3,196 firms, their staffs rose from 412,589 at the beginning of January, to 416,064 on the date under review. This advance involved a smaller number of workers than that indicated on February 1, 1929, when the index was practically the same as on the date under review.

Prairie Provinces.—The contraction in the Prairie Provinces did not involve so many workers as that noted at the beginning of February, 1929, but the situation then was rather better than on the date under review, when employment continued to show the effects of the grain congestion. Statements were tabulated from 990 employers, whose staffs declined by 1,212 persons to 129,677 on February 1. Manufacturing, logging and mining were more active, but shrinkage was recorded in trade, construction, transportation and communications.



Employment by Cities

The trend of employment was upward in Montreal, Windsor and the adjacent Border Cities and Vancouver, while Quebec City, Toronto, Ottawa, Hamilton and Winnipeg showed reductions.

Montreal.—Manufactures registered substantial recovery, especially in the iron and steel, tobacco, textile and electrical apparatus groups, but heavy seasonal losses were indicated in transportation, trade and construction. On the whole, however, there was a large increase in Montreal, according to the data received from 891 firms employing 134,994 workers, as compared with 132,509 in the preceding month. This gain was slightly less than that recorded on February 1, 1929, but the index on the date under review continued higher than in any other winter since the record for Montreal was instituted in 1922.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—In spite of the intensely cold weather which seriously curtailed out-door activities, there was a moderate increase in employment at the beginning of February; this contrasted with the considerable decline recorded on February 1, 1929, when employment was in smaller volume. The working forces of the 701 reporting firms aggregated 77,399, an increase of 565 as compared with their January 1 staffs. There was improvement in manufacturing, logging, communications and construction, while transportation was slacker.

Index numbers of employment by economic areas are given in Table I.

Quebec.—Returns tabulated from 120 employers in Quebec showed that they had reduced their staffs by 1,060 persons to 11,386 at the beginning of February. Manufactures reported curtailment, and trade and construction were seasonally slacker. The index was slightly lower than on the corresponding date

last year, when employment had also shown a reduction.

Toronto.—Heavy, seasonal losses took place in trade, construction and transportation, but there were important gains in manufacturing, especially in textiles and iron and steel. The result was a decrease of 996 in the number employed by the 968 co-operating firms, who had 122,599 employees. An increase had been indicated on February 1 of a year ago, when the index was practically the same as on the date under review.

Ottawa.—Manufacturing was busier, especially in the pulp and paper division, while trade, transportation and communications were seasonally quiet; 146 employers in Ottawa had 12,554 workers, or 398 less than on January 1. Employment was in greater volume than at the beginning of February, 1929.

Hamilton.—Employment in Hamilton showed a further falling-off, mainly in trade and construction. Statistics were tabulated from 221 firms employing 36,994 persons, compared with 37,317 in the preceding month. The index was several points higher than on February 1 of a year ago, despite the fact that improvement had then been indicated.

Windsor and the Adjacent Border Cities.—Recovery, chiefly in automobile plants, was indicated in the Border Cities, where 1,396

NOTE.—The "relative weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Relative weight of Employment by Districts as at Feb. 1, 1930	100·0	7·8	28·1	42·8	13·3	8·0

workers were taken on by the 133 co-operating employers, whose staffs aggregated 15,992. Employment was not so active as on the same date of 1929, when larger gains had been noted.

Winnipeg.—The number employed in Winnipeg showed a contraction, mainly in trade and communications, while manufactures were busier. Returns were compiled from 334 firms with 31,918 employees, as compared with 32,756 in the preceding month. Conditions were not so favourable as at the beginning of February of last year, when curtailment had also been noted.

Vancouver.—The manufacturing industries reported considerable recovery, and construction was also busier. A combined working force of 28,660 persons was recorded by the 271 employers furnishing data, who had 27,838 in their last report. Employment was better than on February 1 of a year ago, when reductions from January 1 had been registered.

Index numbers of employment by cities are given in Table II.

Manufacturing

The revival in manufacturing was not so marked as on February 1, 1929, when the index was slightly higher than on the date under review; with that exception, however, the situation was better than in any other February on record. Statements were tabulated

NOTE.—The "relative weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

from 4,235 manufacturers employing 528,318 operatives, compared with 510,784 in the preceding month. Particularly noteworthy recovery took place in the iron and steel industries, but the textile, lumber, leather, tobacco and non-ferrous metal divisions also registered important gains, while there were losses in animal food, pulp and paper, musical instrument and building material factories.

Animal Products—Edible.—There was a further decline in employment in this group at the beginning of February; the reduction involved fewer workers than that noted on the corresponding date last year, but the index was then a few points higher. Statements were tabulated from 186 firms employing 16,595 workers, as compared with 16,949 in the preceding month. Fish-preserving plants reported the largest losses, which took place to a considerable extent in the Maritime Provinces.

Leather and Products.—Employment in boot and shoe factories showed a large increase; the situation was practically the same as on the corresponding date of a year ago. A combined working force of 16,460 persons reported by the 179 co-operating manufacturers, who had 15,627 employees at the beginning of January. Most of the gain took place in Ontario.

Lumber and Products.—Considerable improvement was indicated in furniture, con-

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

tainer, vehicle and other lumber-using factories, while only a slight advance was made in the rough and dressed lumber group; 1,449 workers were taken on by the 686 firms making returns, who had 43,738 on their staffs. This increase was rather smaller than that registered at the beginning of February, 1929, when the index was slightly higher. The gains in Ontario and Quebec were most extensive.

Musical Instruments.—There was a further curtailment in employment in musical instrument works, 42 of which reduced their payrolls from 2,548 persons on January 1 to 2,150 on February 1. Practically all the decrease was in Quebec and Ontario. Smaller contractions were noted on February 1, 1929, but the index number then was much higher.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	Relative weight[1]	Feb. 1, 1930	Jan. 1, 1930	Feb. 1, 1929	Feb. 1, 1928	Feb. 1, 1927	Feb. 1, 1926	Feb. 1, 1925

[1] The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Plant Products—Edible.—In contrast with the losses registered in this division at the beginning of February, 1929, there was an increase in activity on the date under review, when the 370 reporting establishments enlarged their payrolls by 450 employees to 28,723. Canneries showed further seasonal declines, but improvement was noted in all other branches, notably in biscuit factories. The index on February 1 of last year was several points lower.

Pulp and Paper.—Contractions were recorded in pulp and paper plants, while paper product establishments afforded greater employment; the index was the same as on February 1, 1929. Data were received from 543 employers of 65,822 workers, as against 66,304 at the beginning of January. Most of the reduction took place in Quebec, while only slight changes were indicated in the other provinces.

Rubber Products.—A moderate increase was shown in rubber factories, 38 of which added 110 employees to their payrolls, bringing them to 16,394 at the beginning of February. Employment was not so active as on the same date in 1929, although the tendency was then downward.

Textile Products.—The advance in employment in the co-operating factories was larger than on February 1, 1929, but activity then was rather greater than on the date under review. Silk, woollen, headwear, garment and personal furnishing and other textile establishments registered important increases in personnel. The working force of the 647 co-operating firms aggregated 81,561 persons, as compared with 77,660 in their last report. Ontario and Quebec showed particularly noteworthy improvement.

Tobacco, Distilled and Malt Liquors.—A large gain was recorded in this group, in which employment was in greater volume than on February 1 of a year ago. Returns were tabulated from 143 manufacturers with 16,531 employees, or 552 more than in the preceding month. The bulk of the increase was in Quebec and Ontario.

Chemicals and Allied Products.—Statements were compiled from 114 firms in this group, whose staffs aggregated 7,884, practically the same as at the beginning of January. Slight increases in Ontario were offset by losses in Quebec. Employment was in greater volume than in the winter of earlier years of the record.

Clay, Glass and Stone Products.—There was a further decrease in this group on the date under review, according to 146 manufacturers, whose labour forces included 11,232 workers, or 595 less than in the preceding month. Employment was rather more active than in any other winter for which data are available.

Electric Current.—Partial recovery from the losses indicated in the preceding month was noted in electric current plants at the beginning of February, when 224 persons were added to the staffs of the 93 co-operating manufacturers, who had 15,073 employees. Employment was in greater volume than on February 1 of earlier years of the record.

Electrical Appliances.—Employment in electrical appliance works showed a further advance and the situation continued decidedly better than on the same date a year ago. Data were received from 49 establishments, employing 16,476 operatives, as against 15,970 on January 1. Practically all this gain was registered in Quebec.

Iron and Steel Products.—There were large increases in employment in iron and steel factories, greatly exceeding the losses noted at the beginning of January. The expansion was particularly noteworthy in vehicle and heating appliance works and in rolling mills, while agricultural implement factories were slacker. The improvement in Ontario and Quebec was most pronounuced, but the trend was generally upward. Statistics were tabulated from 685 firms, whose staffs stood at 148,851, compared with 138,235 on January 1. The index was lower than on the corresponding date last year, when greater advances had been indicated.

Non-ferrous Metal Products.—Smelting and refining and lead, tin, zinc and copper works recorded heightened activity. The general gain was practically the same as on February 1, 1929, when the index was several points lower. The working forces of the 106 co-operating manufacturers included 20,317 employees, or 965 more than at the beginning of January. The increase took place largely in Ontario.

Mineral Products.—Eighty-two establishments in the mineral products group reported 13,985 workers, as compared with 14,071 in the preceding month. Activity was generally much greater than in the winter of other years since 1920.

Logging

Seasonal expansion was recorded in logging camps at the beginning of February; the increase was larger than on the same date in 1929, when the index was many points lower. Statements were received from 255 operators employing 56,302 workers, as against 53,858 on January 1. The trend of employment was downward in the Maritime Provinces and Ontario, but upward in the remaining provinces.

Mining

Coal and metallic ore mines afforded increased employment, but a seasonal decline was noted in the mining of non-metallic minerals, other than coal; on the whole, there was a gain of 342 persons in the forces of the operators furnishing returns, who numbered 214. Their staffs aggregated 54,724 employees, of whom 30,268 were engaged in the mining of coal, 17,141 in metallic ores and 7,315 in non-metallic minerals, other than coal. Activity had also shown an advance on February 1, 1929, when the index, as in the winter of other years of the record, was several points lower than on the date under review.

Communications

The working force of the 165 companies and branches reporting stood at 29,384 persons, compared with 31,206 in the preceding month, most of the reduction taking place on telephones. The number employed was greater than on the same date in any of the last ten years, in all of which the tendency was unfavourable.

Transportation

Street Railways and Cartage.—There was a downward trend in employment in this division on February 1, but the index continued higher than in the winter of other years of the record. The 143 co-operating employers had 25,296 persons on their payrolls, or 367 less than in the preceding month. Ontario registered most of the decrease.

Steam Railway.—Seasonal contractions involving a much larger number of workers than on February 1 a year ago, were noted in steam railway operation, in which employment continued to be seriously affected by the grain congestion. Returns were compiled from 105 companies and branches in this group, whose staffs aggregated 76,524 persons, as compared with 78,446 on January 1. There were large decreases in the Prairie Provinces, Ontario and Quebec.

Shipping and Stevedoring.—Employment in water transportation showed a reduction, as is usually the case at the beginning of February; 71 employers released 1,799 workers from their payrolls, bringing them to 11,253 on the date under review. There were losses in the Maritime Provinces, Quebec and Ontario.

Construction and Maintenance

Building.—Employment in building construction declined on February 1, as is customary during the winter. The index was higher than at the beginning of February of any other year of the record. Statistics were received from 676 contractors, with 44,595 persons in their employ, as against 47,181 on January 1. The greatest contractions were in Quebec and the Martime Provinces.

Highway.—The number of persons employed by 199 firms in the highway construction and maintenance group was 9,710, or 780 less than in the preceding month. The seasonal losses in Quebec, Ontario and the Prairie Provinces were especially pronounced. Employment in this group was in greater volume than on February 1, 1929, when the indicated decreases were on a much larger scale.

Railway.—Continued, but smaller contractions were noted in railway construction and maintenance; the decline was not so extensive as that on the same date of 1929, but the number then employed was rather greater than on the date under review. Statements were tabulated from 40 employers in this group, with 29,658 persons on their payrolls, as compared with 31,201 in the last report. Reductions in personnel were registered in all provinces except British Columbia.

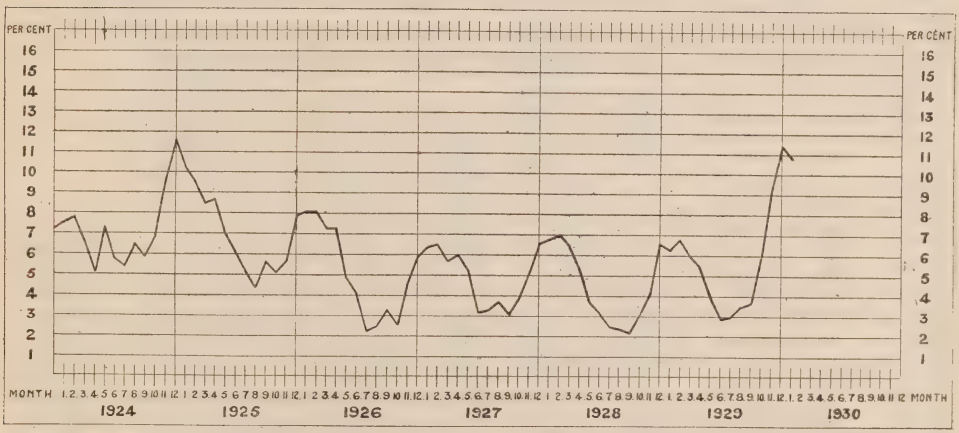
Services

Employment in services, particularly in the hotel and restaurant division, showed considerable improvement at the beginning of February; 226 establishments reported 21,117 employees, or 406 more than on January 1. The index was many points higher than on February 1 last year, when little general change was noted in this group.

Trade

Following the usual activity at the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses were on much the same scale as those noted on the same date in 1929, but employment continued at a higher level than in the winter in other years of the record. The 733 trading establishments furnishing data reduced their payrolls from 91,022 employees on January 1, to 84,893 at the beginning of February. There were general decreases except in British Columbia, these taking place mainly in retail stores, although wholesalers were also slacker.

Tables



Index number of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1930.

(2) Unemployment in Trade Unions at the Close of January, 1930

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation for local trade union members at the close of January showed but little change from the previous month, the tendency, a considerable extent by the arrested grain movement. Practically no change was indicated in the unemployment percentage reported in Ontario from the previous month, though fluctuations occurred in several groups, the most pronounced of which as in the prairie provinces prevailed among steam railway employees and building tradesmen, the former recording a considerable increase in activity and the latter noteworthy employment recessions. From Nova Scotia, New Brunswick and British Columbia a slightly lower employment level was indicated. Manitoba was the only province to record any improvement in conditions over January, 1929, when the unemployment percentage for Canada as a

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

however, being toward greater employment. This was indicated by the returns tabulated for January from an aggregate of 1,772 unions including 211,811 members, of whom 22,795 were idle at the close of the month, a percentage of 10.8, contrasted with 11.4 per cent of unemployment in December. Garment workers in the province of Quebec, who for several months past have reported exceptional unemployment, were afforded a considerably greater volume of work in January, and were the determining factor in the better employment trend shown during January, both in that province and in the country as a whole. The Prairie provinces indicated moderate gains in activity, due to improvement in steam railway operation and car shops, which was partly offset by the employment reductions recorded among building tradesmen. Steam railway workers, however, were still affected to whole stood at 6.3, the change, however, in this province being slight. The reductions in the remaining provinces were attributable chiefly to the exceptional depression existing among the steam railway employees, and the more extensive contractions shown during January this year in the building and construction trades.

A separate tabulation is made each month of trade union unemployment in the largest city in each province with the exception of Prince Edward Island. At the close of January, Montreal unions reported a decidedly improved situation over the previous month, the expansion being mainly confined to the garment trades while gains in employment of much lesser magnitude were recorded by Winnipeg and Toronto unions. On the other hand, Regina, Halifax and Vancouver unions showed substantial curtailment of activity,

and in Edmonton and St. John employment eased off slightly. When a comparison is made the returns for January of last year St. John and Winnipeg unions alone reported a higher employment level during the month under review while in all other cities less favourable conditions prevailed.

The chart accompanying this article illustrates the unemployment trend by months from January, 1924, to date. The curve during January traced a course slightly below that of December, showing that the trend of employment was somewhat better during the month under review, and at the close of the month the unemployment volume as indicated by the curve showed a noteworthy increase over January, 1929.

In the manufacturing industries where returns for January were tabulated from 499 unions with an aggregate membership of 59,676 persons, the percentage of unemployment stood at 8·8, contrasted with percentages of 13.7 in December and 5.6 in January, 1929. Gains in employment in comparison with December involving the largest number of workers were shown in the garment trades, which reported extensive recovery from the dullness shown for several months past. The metal and leather trades also indicated noteworthy improvement while glass workers, metal polishers and hat and cap workers contributed on a much smaller scale to the total employment advance. On the contrary unemployment for papermakers, printing tradesmen, textile, wood, fur, and jewellery workers was in somewhat greater volume than in December. That the percentage of idleness in the manufacturing industries, as a whole, was higher than in January, 1929, may be attributed largely to the less favourable situation which obtained for iron and steel workers and general labourers during the month under review, supplemented by employment recessions, of much lesser degree, among papermakers, printing tradesmen, cigar makers, leather and fur workers. On the other hand, garment workers were considerably better engaged than in January last year.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month.	N.S. and Pr. Edward Island.	New Brunswick.	Quebec.	Ontario.	Manitoba.	Saskatchewan.	Alberta.	British Columbia.	Canada.
Average 1919.....	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Conditions for coal miners were slightly less favourable during January than in either the previous month or January, 1929, as shown by the reports tabulated from 44 unions with 16,995 members. Of these 715, or a percentage of 4·2 were unemployed at the end of the month compared with 2·6 per cent of inactivity in December and with 1·5 per cent in January, 1929. Nova Scotia unions were wholly responsible for the slight unemployment gain recorded over December, while in Alberta the situation showed nominal improvement. Nova Scotia and Alberta unions both contributed a share during January to the increase in idleness reported over January, 1929. British Columbia unions, however, recorded adequate work for all their members during the three months under comparison. Quarry workers, though continuing to show a large percentage of inactivity, still reported slight improvement over the December situation while in January of last year all members were reported busy.

The building trades remained seasonally quiet during January, the volume of inactivity at the close of the month somewhat exceeding that of the preceding month. Returns for January were tabulated from a total of 222 unions of building tradesmen, with 31,654 members, 9,690 of whom or 30·6 per cent were idle, compared with 25·6 per cent in Decem-

ber. Carpenters and joiners reported further contractions of a noteworthy character in January, and among painters, decorators and paperhangers, plumbers and steamfitters, electrical workers, bridge and structural iron workers, hod carriers and building labourers, and granite and stonecutters conditions were also less favourable. On the other hand, some reduction in the unemployment volume was apparent among bricklayers, masons and plasterers, and tile layers, lathers and roofers. Compared with the situation in the building trades during January, 1929, when 19·0 per cent of idleness was recorded, granite and stonecutters alone reported a higher employment volume during the month reviewed, while of the declines in the remaining trades the most pronounced, as in the previous comparison, was indicated by carpenters and joiners.

Slight improvement was shown in the transportation industries during January from the previous month, the 758 unions from which reports were tabulated covering a membership of 72,586 persons, indicating 7·3 per cent of unemployment as compared with 8·3 per cent in December. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, accounted largely for the employment gain recorded over December, the maintenance of way group particularly showing expansion. Nominally improved conditions, however, were reported by teamsters and chauffeurs. Operations for navigation workers were somewhat restricted during January, while among street and electric railway employees practically no change occurred. A lower level of employment was maintained in the transportation industries than in January, 1929, when 4·7 per cent of the members reported were idle, the steam railway division, owing to a continuance of the depression which has existed for several months being responsible for the adverse change. Employment for navigation workers showed moderate improvement over January last year, and nominal gains were registered by teamsters and chauffeurs. Street and electric railway employees indicated the same percentage of idle members in both months of the comparison.

Longshoremen, whose reports are tabulated separately each month, indicated 25·4 per cent of unemployed members at the close of January, compared with 16·4 per cent of idleness in December, and with 12·4 per cent in January, 1929. Reports were received for January this year from 15 associations of longshore workers, combining a membership of 7,715 persons.

Retail clerks reported a fully engaged situation in January compared with fractional unemployment percentages in both the previous month and January, 1929, as shown by returns tabulated from 5 unions of these workers, embracing a membership of 882 persons.

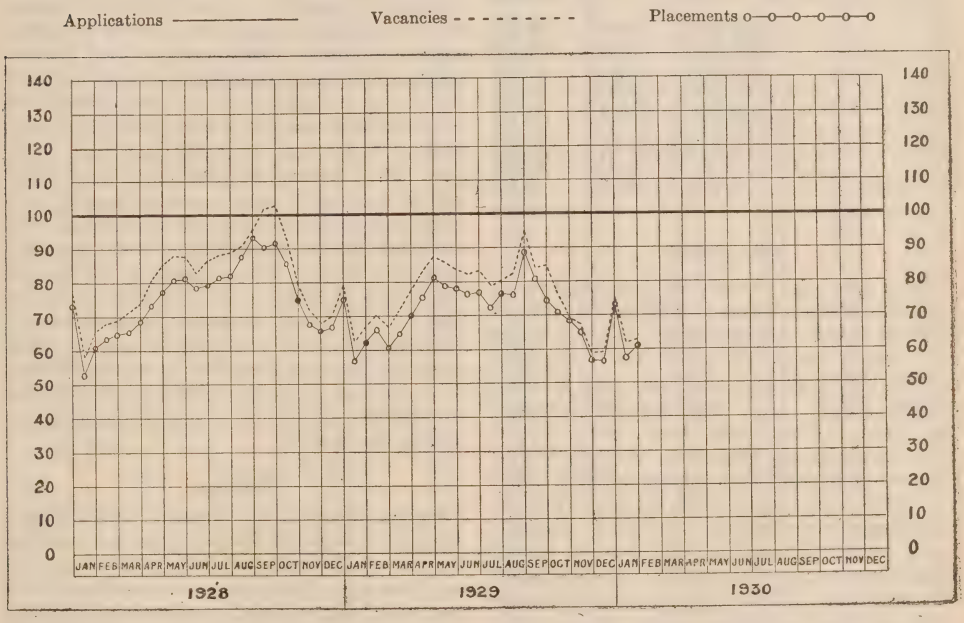
From civic employees 67 reports were received in January, covering a membership of 7,861 persons, 193, or a percentage of 2·5, of whom were idle at the close of the month, compared with 2·0 per cent of inactivity in December and 1·5 per cent in January a year ago.

Conditions for workers in the miscellaneous group of trades were somewhat less favourable during January than in either the previous month or January, 1929, as indicated by the reports received from 122 unions with 6,798 members. Of these 604, or a percentage of 8·9, were without work on the last day of the month, contrasted with 5·6 per cent of unemployment in December, and with 6·2 per cent in January, 1929. Curtailment of employment was indicated during January by stationary engineers and firemen and hotel and restaurant employees over both the preceding month and January, of last year, while among barbers slight declines in activity were noted, as compared with December, but the situation remained unchanged from that of January a year ago. Theatre and stage employees reported slight improvement in both comparisons.

Some reduction in the unemployment volume was registered by fishermen during January from the previous month, who, however, continued to report considerable inactivity, the percentage of idleness at the end of the month showing a marked advance over that recorded in January a year ago. Returns for the month under review were received from 4 unions of these workers, with a total membership of 815 persons.

The 4 unions of lumber workers and loggers from which reports were tabulated in January, embracing a membership of 1,130 persons indicated 12·2 per cent of idleness at the end of the month compared with 2·7 per cent in December and with a fully engaged situation in January, 1929.

Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for January of each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table II.



(3) Employment Office Reports for January, 1930

The volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1930, as indicated by the average daily placements effected, showed a decline of 10 per cent from the preceding month, but a gain of nearly 14 per cent when a comparison was made with the records of January a year ago. All groups except manufacturing, farming and trade showed losses in the first instance, the largest decline being in services, while under the second comparison the gain shown was attributable to a substantial increase in placements in construction and maintenance, followed by a gain of lesser importance in logging, all other groups showing declines.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements declined sharply during the first half of the month, followed by an upward trend during the latter half of the period under review, but at the close of January the curve of vacancies was over 4 points, and that of placements over one point below the levels attained at the close of January, 1929. The ratio of vacancies to each 100 applications was 62·0 and 63·0 during the first and second half of January, in comparison with the ratios of 62·6 and 67·3 during the same periods of 1929. The ratios of placements to each 100 applications during the periods under review were 57·4 and 61·1 as compared with 56·9 and 62·2 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1930, was 1,053 as compared with 1,151 during the preceding month and with 957 in January a year ago.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The average number of applications for employment received daily by the offices during the month under review was 1,685 as compared with 1,708 in December and with 1,475 during January last year.

The average number of placements made daily by the offices of the Service during January, 1930, was 998, of which 591 were in regular employment and 407 in work of one week's duration or less, as compared with a total daily average of 1,113 during the preceding month. Placements in January a year ago averaged 877 daily, consisting of 528 place-

ments in regular and 349 in casual employment.

During the month of January, 1930, the offices of the Service referred 27,318 persons to vacancies and effected a total of 25,929 placements. Of these the placements in regular employment were 15,350, of which 11,904 were of men and 3,446 of women, while placements in casual work totalled 10,579. The number of vacancies reported by employers was 19,548 for men and 7,817 for women, a total of 27,365, while applications for work numbered 43,790, of which 31,592 were from men and 12,198 from women.

The following table gives the placements recorded by the offices of the Employment Service of Canada from January, 1920, to date:

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,147	137,620	398,367
1930 (1 month)	15,350	10,579	25,929

NOVA SCOTIA

There was an increase in the number of positions offered through employment offices in Nova Scotia during January of over 6 per cent when compared with the preceding month, but a decline of 4 per cent in comparison with the corresponding month last year. Placements were over 5 per cent in excess of December, but showed a nominal gain only when compared with January, 1929. Services showed the only gain of importance over January last year, although there were increases in all groups except manufacturing, transportation and logging. The reductions in these groups, of which manufacturing was the largest, offset the gains in other divisions. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 40; logging, 47; construction and maintenance, 39; trade, 66; and services, 418, of which 302 were household workers. During the month 85 men and 66 women were placed in regular employment.

NEW BRUNSWICK

The demand for workers as indicated by orders received at employment offices in New Brunswick during January was 2 per cent higher than in the preceding month, but over 4 per cent less than during the corresponding month last year. There was a decline of nearly 3 per cent in placements when compared with December and of over 6 per cent in comparison with January, 1929. Manufacturing and services were the only division in which more placements were made during the month under review than in January last year, and these gains were more than offset by declines in all other groups, of which construction and maintenance was the most noteworthy. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 47; transportation, 20; construction and maintenance, 20, and services, 511, of which 378 were of household workers. Regular employment was found for 73 men and 51 women during the month.

QUEBEC

During January, employment offices in the province of Quebec received orders for nearly 18 per cent less workers than in the preceding month, but there was a nominal gain in comparison with the corresponding month last year. There was a decline in placements of nearly 17 per cent when compared with December, but a gain of 5 per cent in comparison with January, 1929. Increased placements over January of last year were made in logging, services and manufacturing, while declines were recorded under construction and maintenance and trade. The changes in other divisions were nominal only. Placements by industrial divisions included: manufacturing, 127; logging, 426; construction and maintenance, 226; and services, 531; of which 434 were of household workers. There were 789 men and 492 women placed in regular employment during the month.

ONTARIO

Orders received at Ontario offices during January called for 25 per cent less workers than in the preceding month, and over 2 per cent less than during the corresponding month last year. There was a decline also in placements of over 30 per cent when compared with December, and of over 4 per cent in comparison with January, 1929. Logging and construction and maintenance were the only groups in which there were gains in placements over January of last year and these increases were more than offset by declines in other divisions of which manufacturing was the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 957; logging, 2,160; farming, 272; transportation, 144; construction and maintenance, 3,174; trade, 446 and services 3,356, of which 2,058

were of household workers. During the month 4,942 men and 1,352 women were placed in regular employment.

MANITOBA

Opportunities for employment as indicated by orders received at employment offices in Manitoba during January were nearly 7 per cent better than in the preceding month, but over 6 per cent less favourable than during the corresponding month last year. There was a gain of nearly 7 per cent in placements over December and of nearly 15 per cent in comparison with January, 1929. Increased placements in the logging industry were mainly responsible for the gains over January last year, although construction and maintenance, farming and mining, also showed improvement. The largest decrease in placements from the corresponding month last year was in services. There were, however, also declines in manufacturing and transportation. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 55; logging, 1,188; farming, 410; construction and maintenance, 395; trade, 174 and services 1,378, of which 1,134 were of household workers. During the month 1,714 men and 498 women were placed in regular employment.

SASKATCHEWAN

There was a gain of nearly 11 per cent in the number of positions offered through employment offices in Saskatchewan during January when compared with the preceding month, but a nominal decline in comparison with the corresponding month last year. Placements were over 8 per cent higher than in December and 3 per cent in excess of January, 1929. Although there was a net gain for the Province, placements in all divisions except construction and maintenance, manufacturing and mining were below January of last year. In no group, however, was the change under this comparison large. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 119; logging, 195; farming, 250; transportation, 58; construction and maintenance, 326; trade, 95 and services, 813, of which 483 were of household workers. During the month 531 men and 354 women were placed in regular employment.

ALBERTA

Employment opportunities as indicated by orders received at employment offices in Alberta during January were 97 per cent higher than in the preceding month and 152 per cent above the corresponding month last year. Placements also were 98 per cent higher than in December and 160 per cent above January, 1929. This large increase in placements was nearly all attributable to work undertaken as a relief measure in the Highway division of construction and maintenance. There were, however, gains in placements under services and farming. Fewer placements were made in all groups, but these declines were small. Placements by industries included: manufacturing, 128; logging, 377; farming, 270; mining, 81; construction and maintenance, 2,971; trade, 123, and services, 1,043, of which 530 were of household workers. Placements in regular employment numbered 3,085 of men and 293 of women.

BRITISH COLUMBIA

During January, positions offered through employment offices in British Columbia were nearly 6 per cent higher than in the preceding month, but one per cent less than in the corresponding month last year. There was a gain of over 5 per cent in placements when compared with December, but a decline of over 2 per cent in comparison with January a year ago. All groups except construction and maintenance, services and trade, participated in the declines in placements from January, 1929, although logging was the only division in which the decrease was large. Placements by industrial divisions included: manufacturing, 251; logging, 247; farming, 65; transportation, 58; construction and maintenance, 334; trade, 184 and services, 999, of which 598 were of household workers. Regular employment was found for 685 men and 340 women during the month.

Movement of Labour

During the month of January, 1930. the offices of the Employment Service of Canada effected 15,350 placements in regular employment, of which 7,593 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,991 were granted the Employment Service reduced transportation rate, 1,330 travelling to points within the same province as the despatching office and 661 to other provinces. The reduced rate which is 2·7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour, both within and from the province of Quebec during January

was toward logging camps and comprised the transfer of 109 bush workers, 77 of whom went to employment within the province and 32 to centres outside. All the certificates for transportation to provincial points were secured at Quebec, from which centre 74 bush workers travelled to Amos, 2 to Rouyn and 1 within the Quebec zone. Of the workers going outside the province 22 were transported from Hull to logging camps in the Pembroke zone and 10 from Montreal to employment in the Timmins zone.

The number of workers travelling from Ontario centres at the special transportation rate during January was 707, of whom 704 were bound for centres within the province and 3 for points outside. The provincial movement was largely of bushmen, logging camps in the vicinity of Timmins being the destination of 466 of these workers, while 145 travelled to Port Arthur and surrounding districts, 32 to the Fort William zone, 14 to Sudbury, 10 to Kingston and 9 to Cobalt. These were recruited chiefly by the northern offices. The Sudbury zone in addition, received 5 bricklayers from Windsor, 2 iron workers from Fort William, 2 teamsters from Pembroke, and 1 electrician from Hamilton, and Cobalt 1 farm hand and 1 clerk from North Bay. The Windsor office also transferred 1 hotel cook to Sarnia. From Toronto 1 lineman was carried at the special rate to Guelph, 1 carpenter to Pembroke, 1 lineman to Ottawa, and 1 pipefitter to Port Arthur, while from Cobalt 9 mine workers went to Timmins and 1 mine worker to Port Arthur. The one remaining transfer was of a stonemason who journeyed from Ottawa to employment at North Bay. The 3 workers travelling outside the province were destined to the Winnipeg zone, two of these being construction drillers sent from Port Arthur and 1 a machine man shipped from Cobalt.

At Manitoba offices 784 persons secured certificates for reduced transportation during January, 174 of which were issued to points within the province and 610 to centres in other provinces. Of the former 169 were granted at Winnipeg, from which centre 5 farm generals and 4 hotel workers journeyed to Brandon, 1 hotel waitress to Dauphin and 96 farm hands, 3 farm domestics, 33 bushmen, 21 mine workers, 3 construction labourers, 2 lumber workers and 1 carpenter to employment within the Winnipeg zone. In addition, 5 bushmen were carried at the special rate from Dauphin to points within the same zone. With the exception of 1 hotel worker who proceeded from Brandon to Estevan, all the transfers outside the province were effected by the Winnipeg office, which despatched 517 bush workers, 20 lumber workers, 6 farm hands, 4 town generals, 3 hotel waitresses and 1 cook to employment in the Port Arthur zone, 1 farm hand, 1 farm domestic and 1 town general to Timmins, and 2 structural steel workers to Sudbury. To Nelson, Winnipeg also transferred 23 station men, while the balance of the interprovincial movement was to Saskatchewan centres, the Regina zone receiving 10 farm hands and 4 farm domestics, Estevan 7 farm hands and 1 farm household worker, the Saskatoon and Yorkton zones each 3 farm hands, and the Moose Jaw and Prince Albert zones each 1 farm hand.

Saskatchewan offices issued 154 certificates for the special reduced rate during January, 147 of which were provincial and 7 interprovincial. The latter were granted to electricians bound for employment in the Dauphin zone, 4 of whom were shipped from Regina, 2 from Saskatoon and 1 from Moose Jaw. Provincially the Saskatoon office was instrumental in the transfer of 68 bushmen and 1 farm hand to Prince Albert, 2 bushmen to North Battleford, 1 farm hand to Moose Jaw, and 3 farm hands within the Saskatoon zone while from Regina 25 bushmen travelled to Yorkton, 2 farm hands to Estevan, 1 farm hand to Saskatoon, 1 housekeeper to Moose Jaw, 1 bushman to Prince Albert, and 6 farm hands to employment within the Regina zone. In addition, the Prince Albert office granted certificates to 28 bushmen and 2 cooks destined to employment within the same zone, and Moose Jaw to 4 farm hands and 1 hotel porter going to Regina and to 1 farm hand travelling to a point within its own zone.

From Alberta centres 192 persons took advantage of the Employment Service reduced transportation rate during January, 191 of whom went to provincial employment. Of these 179 were despatched from Edmonton, and included 150 bush workers, 10 farm hands, 1 farm household worker, 9 mine workers, 3 labourers, 2 teamsters, 1 electrician, 1 carriage setter, and 1 porter travelling to employment within its own zone, and 1 farm hand to Drumheller. From Calgary also. 4 farm hands and 1 cook went to Edmonton, 3 farm hands and 1 farm domestic to Drumheller, 2 farm housekeepers to Lethbridge and 1 farm hand within the Calgary zone. The one interprovincial transfer was of a farm hand who was carried at the special reduced rate from Calgary to Cranbrook.

Certificates for the reduced transportation rate granted by British Columbia offices during January totalled 45, of which 37 were issued to provincial points and 8 to centres in other provinces. Of the provincial certificates 25 were granted at Vancouver to 4 lum-

ber workers and 2 bushmen travelling to Prince George, 3 mine workers, and 1 first aid man to Revelstoke, 1 stenographer, 1 baker and 1 cook to Penticton, 1 blacksmith and 1 farm hand to Kamloops, 1 cook to Nelson, and 5 bush workers, 2 tunnel construction workers and 2 bridge construction workers going to points within the Vancouver zone. The remaining transfers within the province were from Nelson, which office despatched 4 mine workers to Revelstoke and 8 bush workers within its own zone. Included in the movement outside the province from Vancouver were 4 carpenters journeying to Winnipeg, and 2 tile setters to Regina, while from New Westminster 1 farm hand went to Calgary and 1 to Saskatoon.

Of the 1,991 persons who benefited by the Employment Service reduced transportation rate during January, 1,410 were transported by the Canadian National Railways, 436 by the Canadian Pacific Railway, 142 by the Temiskaming and Northern Ontario Railway, and 3 by the Pacific Great Eastern Railway.

(4) Building Permits issued in Canada in January, 1930

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, and the aggregate was also lower than in January, 1929 and 1928. The Co-operating municipalities reported permits for building estimated to cost $7,189,741, as compared with $14,688,682 in December, 1929, and $8,416,880 in January, 1929. There was, therefore, a reduction of 51·1 per cent in the former, but of only 14·6 per cent in the latter, a more significant comparison.

Some 50 cities furnished detailed statements, showing that they had granted over 300 permits for dwellings valued at about $1,400,000 and nearly 900 permits for other buildings estimated to cost approximately $5,700,000. In December, authority was granted for the erection of some 400 dwellings and 1,100 other buildings, estimated to cost approximately $3,400,000 and $11,000,000 respectively.

Nova Scotia, Manitoba and Saskatchewan reported increases in the value of the building authorized during January as compared with December, the gain of 119·9 per cent in the last named being most noteworthy. Of the declines recorded in the remaining provinces,

that of $4,075,707, or 58 per cent, in Ontario was most pronounced.

As compared with January, 1929, there were increases in New Brunswick, Manitoba, Saskatchewan and Alberta, while there was also a very slight gain in Quebec. The most marked advance in this comparison was in Saskatchewan, where the value of the building authorized increased by $982,323, or 1077·5 per cent. Reductions were recorded in Nova Scotia, Ontario and British Columbia, that of $1,959,337, or 40 per cent in Ontario being greatest.

In Toronto and Vancouver, there were decreases in the value of the building permits granted as compared with the preceding month and with the corresponding month of last year. Winnipeg showed an advance in both comparisons, while in Montreal the January total was lower than in December, but higher than in January, 1929. The following cities reported increases in both comparisons—Sherbrooke, Brantford, Hamilton, Kingston, London, Stratford, St. Catharines, Sarnia, Walkerville, Saskatoon and Nanaimo.

The value of the permits issued by 61 cities in January of the years 1920-30 is shown below.

Year	Value
	$
1930	7,189,741
1929	8,416,880
1928	7,716,587
1927	5,676,537
1926	4,719,534
1925	5,447,270
1924	4,460,579
1923	4,139,498
1922	3,326,537
1921	2,595,564
1920	4,017,024

As previously stated, the 1930 figure for January was only twice exceeded in the 11 years record, i.e., by the aggregates for 1929 and 1928.

The accompanying table gives the value of the building permits issued by 61 cities in January, 1930, and December and January, 1929. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during January is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labour, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for February, 1930, and previous months are reproduced below.

Great Britain

In the week after Christmas there was the usual increase in the numbers unemployed. This was followed by some improvement in the first three weeks of January, but in the last week of the month there was a further decline, and at the end of the month the numbers unemployed were only slightly below the figures for the end of December. Between 16th December and the end of January a decline in employment occurred in most industries. This was especially marked in the cotton and other textile trades. Other industries chiefly affected included building, public works contracting, artificial stone, cement, brick, and tile making, pottery, glass, iron and steel manufacture, general and electrical engineering and other metal trades, the leather, clothing (except hats and caps), food, drink and tobacco, woodworking and paper trades, road transport, dock and harbour service, and the distributive trades.

There was a further improvement, however, in the coal mining industry.

Among the workpeople, numbering approximately 12,100,000, insured against unemployment in Great Britain and Northern Ireland, and working practically every industry except agriculture and private domestic service, the percentage unemployed at January 27, 1930 (including those temporarily stopped as well as those wholly unemployed), was 12·6, as compared with 11·1 at December 16, 1929, and 12·2 at January 21, 1929. The percentage wholly unemployed at January 27, 1930, was 9·8, as compared with 8·9 at December 16,

1929; while the percentage temporarily stopped was 2·8, as compared with 2·2. For males alone the percentage at January 27, 1930, was 13·4 and for females 10·4. At December 16, 1929, the corresponding percentages were 12·3 and 8·1. The total number of persons (insured and uninsured) registered at Employment Exchanges in Great Britain and Northern Ireland at January 27, 1930, was approximately 1,534,000, of whom 1,129,000 were men and 315,000 were women, the remainder being boys and girls. At December 16, 1929, it was 1,341,000, of whom 1,037,000 were men and 245,000 were women; and at January 28, 1929, it was 1,434,000, of whom 1,113,000 were men and 236,000 were women.

United States

Employment in the United States decreased 2·6 per cent in January, 1930, as compared with December, 1929, and pay-roll totals decreased 5·4 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executives and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of October and November, 1929, and therefore cannot be included in the general statement for the month of January. The number of employees of Class I railroads as at November 15 totalled 1,664,023, representing a decrease of 4·0 per cent since October 15. The amount of pay-roll in the entire month of November was $232,741,287, representing a decrease over the previous month of 8·9 per cent.

Employment in manufacturing industries decreased 1·8 per cent in January, 1930, as compared with December, 1929, and pay-roll totals decreased 4·8 per cent. These decreases are based upon returns from 12,264 establishments, in 54 manufacturing industries, having in January 3,161,419 employees whose combined earnings in one week were $81,289,756.

The Bureau of Labour Statistics' weighted index of manufacturing employment for January, 1930, is 90·2 as compared with 91·9 for December, 1929, 94·8 for November, 1929, and 95·2 for January, 1929; the weighted index of pay-roll totals for January, 1930, is 87·6, as compared with 92·0 for December, 1929, 95·1 for November, 1929, and 94·5 for January, 1929. The monthly average for 1926 equals 100·0.

Prior to 1930, decreases in employment in January as compared with December had appeared in five of the six Januarys for which the bureau had comparisons with the preceding December, the decreases in employment having ranged from 0·3 to 1·6 per cent each. A decrease in January is therefore a customary seasonal one, and the decrease of 1·8 per cent in January, 1930, is not notably greater than in preceding years.

Two of the main industrial groups—vehicles and leather—showed substantial increases in employment in January as compared with December, the first being due to the notable increase of 7·8 per cent in the automobile industry and the second to the smaller seasonal increase of 2·4 per cent in boots and shoes. Other separate industry increases in employment over the month interval were 1·4 per cent in iron and steel, 7·6 per cent in sugar refining, 5·6 per cent in millinery, 11 per cent in fertilizers, 3·2 per cent in agricultural implements, 2·9 per cent in automobile tires, 4·8 per cent in shipbuilding, and smaller increases in textile finishing, women's clothing, hardware, paper and pulp, and smoking tobacco.

The stone-clay-glass, lumber, non-ferrous metal, and tobacco industrial groups in January were most affected by decreased employment, a considerable share of the decrease being seasonal. The outstanding separate industry decreases in January were in confectionery, knit goods, stoves, sawmills, furniture, paper boxes, cement, brick, stamped ware, cigars, carriages, pianos, and rubber boots and shoes.

The rayon and radio industries, which are not yet included in the bureau's indexes, both reported losses in number of workers in January, the decreases in employment having been 1·5 per cent and 3·5 per cent, respectively.

Decreased employment was shown in January, as compared with December, in eight of the nine geographic divisions, the eastern divisions showing the smallest decreases; the East North Central division, where the automobile industry is most in evidence, showed an increase of 0·4 per cent.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928,

9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent.

Labour of Women in Limited Price Chain Stores in United States

An account of the conditions of employment in five and ten-cent stores and limited price chain department stores in the United States is given in Bulletin 76 of the Women's Bureau, United States Department of Labour. The continuous growth in the profits of stores of this type is attributed to the savings in "overhead" outlay effected by means of centralized and quantity buying, the cash basis of business, the non-delivery system, and limited advertising. The principle of rapid "turnover" is also an important factor. It is stated that the 5 and 10-cent store, and later the limited-price department store, usually has had to contend with inefficient sales forces. The idea that the arrangement of goods was such that little skill in selling was required has, in the past, induced the payment of a low wage, with consequent lack of interest and high labour turnover. However, there are indications that this condition is improving in many chains.

An investigation into the stores in eighteen states showed that of the 3,047 women reporting living conditions, only 8 per cent lived independently, that is, boarded and lodged with people to whom they were not related. The remaining 92 per cent lived with relatives, a proportion that is not surprising, since so many of the women were girls under 20. Some of the women lived with parents, sisters, or other relatives, and some were married. It is stated that the proportion of workers living at home is higher in limited-price stores than in general mercantile establishments, and in this connection the report points out that "it is very poor social economy to proceed on the theory that the unmarried woman at home should be paid a low wage because she can live more cheaply at home. While it is true that the family life can effect some saving, the amount thereof often is greatly exaggerated. To the extent that the employed girl is unable to maintain herself entirely she becomes dependent upon her family, and thus contributes materially to any precarious financial condition existing within the family while actually spending her time and energy in work that should afford her a living. More than this, in the case of the girl receiving somewhat more adequate return for her labour it has been shown repeatedly that a large majority of those living at home must contribute to the support of others besides themselves if the family is to be maintained above the subsistence level."

Of 3,086 women reporting age 82·9 per cent were under 25 years, 56·6 per cent were under 20, and 28·3 per cent were under 18. In each of the 12 States more than half of the women and in each of the 3 States almost half were under 20. Of 3,047 women reporting living conditions 92 per cent were with relatives. Only 8 in every 100 women were living independently. Of 2,938 women reporting marital status more than 8 in every 10 were single.

The regular schedules of working hours were reported for 252 establishments, employing 5,224 women. Three-eighths of these women, in nearly a third of the establishments, had a day of 8 hours or less. A 9-hour day was scheduled for about 30 per cent of the women, employed in almost half of the stores included. The remaining had a day of over 8 and under 9 hours. The time allowed for lunch and rest in the middle of the day was one hour for about 90 per cent both of the establishments and of the women studied. About a fourth, both of the establishments and of the women, had a schedule of 10 hours on Saturday; more than a fifth worked more than 10 but less than 12 hours.

Only about 3 per cent of the women included had a weekly schedule of 48 hours, the equivalent of 8 hours on 6 days of the week; another group of almost the same size had a week shorter than 48 hours. Approximately 70 per cent of the women had a week of more than 48 including 54 hours, roughly the equivalent of a 9-hour day for 5½ or 6 days. For about a fourth of the women studied the weekly schedule was longer than 54 hours.

In 1928 the median of the week's earnings of 6,061 women in 179 stores in 18 states and 5 additional cities, was $12. The medians for the various States ranged from $8.80 in Maryland to $16 in California. In every locality but Georgia, Rhode Island, and South Carolina some women earned less than $5. The highest earnings in a State ranged from less than $12 in Mississippi to $45 in Ohio. In four States the largest groups of 6-day workers earned $10 and under $12, in five States $12 and under $15, and in two States $15 and under $18. In four cities the largest groups earned $12 and under $15, and in one $18 and over.

FAIR WAGES CONDITIONS IN GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military or naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as

respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Repairs to Section 54, Fortification Walls, Quebec, P.Q. Name of contractor, Mr. Oscar Dumaine, Quebec, P.Q. Date of contract, February 18, 1930. Amount of contract, $6,095. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages Not less than	Hours per day
	Per hour	
Masons	$1 00	9
Labourers	0 35	9–10
Carpenters	0 55	9

Repairs to Section 75, Fortification Walls, Quebec, P.Q. Name of contractor, Mr. Emile Coté, Quebec, P.Q. Date of contract, February 19, 1930. Amount of contract, $1,940. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Masons	$1 00	9
Labourers	0 35	9–10
Carpenters	0 55	9

Installation of a hot water heating system in the Wellington Barracks, Halifax, N.S. Name of contractors, Powers Bros., Ltd., Lunenburg, N.S. Date of contract, February 24, 1930. Amount of contract, $13,450. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours of labour	
	Per hour	Per day	Per week
Bricklayers	$1 00	8	44
Plasterers	1 00	8	44
Carpenters	0 73	8	44
Painters	0 73	8	44
Sheet Metal Workers	0 85	8	44
Plumbers and Steamfitters	0 85	8	44
Mechanics Helpers	0 45	8	44
Skilled Labour	0 45	9	54
Common Labour	0 40	9	54
	Per day		
Driver with horse and cart	4 50	9	54
Driver with team and wagon	7 00	9	54

Surfacing of field, Rockcliffe Aerdrome, Rockcliffe, Ont. Name of contractor, Mr. Joseph Cyr, Cyrville, Ont. Date of contract, February 17, 1930. Amount of contract, $3,116.75. The General Fair Wages Clause was inserted in the contract.

Filling of slough, Rockcliffe Aerdrome, Rockcliffe, Ont. Name of contractor, Mr. Joseph Cyr, Cyrville, Ont. Date of contract, February 25, 1930. Amount of contract, $3,006.25. The General Fair Wages Clause was inserted in the contract.

Construction of a heating test tank building at Ottawa, Ont. Name of contractors, W. G. Edge Co., Ltd., Ottawa, Ont. Date of contract, February 19, 1930. Amount of contract, $3,500. The General Fair Wages Clause was inserted in the contract.

Construction of a culvert across the Provincial highway, Trenton Airport, Trenton, Ont. Name of contractor, J. J. McNab, Trenton, Ont. Date of contract, February 26, 1930. Amount of contract, $7,497. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Niagara Falls, Ont. Name of contractors, Pigott Construction Co., Ltd., Hamilton, Ont. Date of contract, February 24, 1930. Amount of contract, $97,500 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Labourers	$0 40	10
Concrete workers	0 40	10
Concrete finishers	0 60	8
Stonecutters	1 25	8
Bricklayers and Masons	1 25	8
Brick and Hollow Tile Layers	1 25	8
Structural Steel Workers	1 00	8
Carpenters and Joiners	1 00	8
Marble Setters	1 25	8
Marble Setters' Helpers	0 60	8
Terrazzo layers	Class A 1 05	8
	Class B 1 00	8
Terrazzo layers' helpers	0 60	8
Sheet metal workers	1 00	8
Sheet metal workers' helpers	0 45	8
Roofers—felt and gravel	0 65	8
Lathers—metal	0 90	8
Plasterers	1 25	8
Plasterers' helpers	0 60	8
Painters and glaziers	0 75	8
Plumbers and steamfitters	1 00	8
Plumbers and steamfitters' helpers	0 45	8
Electricians	0 85	8
Electricians' helpers (apprentices)	40c up	8
Driver, horse and cart	0 70	10
Driver—team and wagon	0 90	10
Motor truck driver	0 50	10

Overtime to be paid for all hours worked beyond those specified above, according to the prevailing conditions in the District for the classes set forth.

Construction of alterations to the central plant for National Research Council, New Edinburgh, Ottawa, Ont. Name of contractors, W. G. Edge, Ltd., Ottawa, Ont. Date of contract, February 18, 1930. Amount of contract, $9,300. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages Not less than	Hours of labour. Not more than	
	Per hour	Per day	Per week
Labourers	$0 45	8-10	..
Plumbers and steamfitters	1 00	8	44
Driver, horse and cart	0 70	8-10	..
Driver, team and wagon	1 00	8-10	..
Electricians	0 80	8	44

Construction of wind tunnel and workshops for National Research Council of Canada, New Edinburgh, Ottawa, Ont. Name of contractors, Erskine, Smith & Co., Ltd., Ottawa, Ont. Date of contract, January 21, 1930. Amount of contract, $9,350. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours of labour Not more than	
	Per hour	Per day	Per week
Labourers	$$0 45	8-10	..
Plumbers and steamfitters	1 00	8	44
Driver, horse and cart	0 70	8-10	..
Driver, team and wagon	1 00	8-10	..

Construction of repairs and improvements to wharf at Roberval, Que. Name of contractors, Gagnon & Freres de Roberval, Ltee, Roberval, Que. Date of contract, February 1, 1930. Amount of contract, approximately $32,067. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
General Foreman	$0 60	10
Carpenters	0 45	10
Blacksmiths	0 50	10
Blacksmiths' helpers	0 35	10
Labourers	0 30	10
Drivers with one horse—cart	0 40	10
Drivers with two horses—cart	0 50	10

Ballasting of approximately four miles of tracks at Prescott, Ont. Name of contractors, Grenville Crushed Rock Co., Ltd., Montreal, P.Q. Date of contract, February 10, 1930. Amount of contract, $17,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours of labour. Not more than
	Per day	Per day
Carters, horse and cart	$5 00	9–10
Teamsters, team and wagon	7 00	9–10
Motor truck drivers	5 00	9–10
	Per hour	
Motor truck and driver	2 50	9–10
Track labourers	0 40	9–10

Construction of an Immigration Building at North Battleford, Sask. Name of contractor, James Friel, Saskatoon, Sask. Date of contract, February 5, 1930. Amount of contract, $25,500 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours of labour. Not more than
	Per hour	Per day
Bricklayers and masons	$1 45	8
Hollow tile layers	1 45	8
Marble setters	1 45	8
Plasterers	1 35	8
Plasterers' helpers	0 60	8
Plumbers	1 25	8
Plumbers' helpers	0 55	8
Structural iron workers	0 90	8
Carpenters and joiners	1 00	9
Electricians	1 00	9
Sheet metal workers	1 00	9
Painters and glaziers	0 87½	9
Felt and gravel roofers	0 85	9
Electricians' helpers	0 70	9
Sheet metal workers' helpers	0 65	9
Terrazzo layers	0 75	9
Terrazzo layers' helpers	0 50	9
Cement finishers	1 00	10
Cement layers	0 50	10
Cement mixers	0 45	10
Common labourers	0 45	10
Teamsters	0 40	10
Teamsters, team and wagon	0 90	10
	Per yard	
Metal lathers	0 08	10

Construction of a temporary Immigration Building at Falher, Alta. Name of contractor, W. Desaulniers, Fahler, Alta. Date of contract, February 4, 1930. Amount of contract, $9,975. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages Not less than	Hours of labour. Not more than
	Per hour	Per day
Concrete finishers	$1 00	8
Concrete mixers	0 50	8–10
Concrete layers	0 50	8–10
Bricklayers and masons	1 45	8
Carpenters and joiners	1 00	8
Metal lathers	1 00	8
Plasterers	1 45	8
Plasterers' helpers	0 60	8
Sheet Metal workers	1 10	8
Painters and glaziers	0 95	8
Plumbers and steamfitters	1 15	8
Plumbers' and steamfitters' helpers	0 60	8
Electricians	1 00	8
Electricians' helpers	0 60	8
Common labourers	0 45	8–10
Driver, Team and wagon	0 95	8–10
Truck driver	0 50	8–10

Construction of a public building at Brandon, Man. Name of contractors, The J. McDiarmid Co., Ltd., Winnipeg, Man. Date of contract, January 21, 1930. Amount of contract, $129,400 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours of labour. Not more than	
	Per hour	Per day	Per week
Labourers, skilled	$0 45	9	50
Labourers, unskilled	0 35	9	54
Driver, horse and cart	0 50	10	..
Driver, team and wagon	0 70	10	..
Motor truck driver	0 40	10	..
Concrete mixer	0 45	9	54
Concrete layer	0 45	9	54
Concrete finishers	0 70	9	50
Masons	1 45	8	44
Masons' helpers	0 50	9	50
Stone cutters, carvers	1 12½	8	44
Stone cutters, journeymen	1 25	8	44
Brick and terra cotta layers	1 45	8	44
Structural steel workers	0 90	8	44
Structural steel riveters	0 90	8	44
Derrick operators	1 20	9	50
Carpenters and joiners	1 10	8	44
Marble setters	1 40	8	44
Terrazzo layers	0 72½	8	44
Terrazzo layers' helpers	0 55	9	50
Metal lathers	1 05	8	44
Plasterers	1 35	8	44
Plasterers' helpers	0 50	9	50
Sheet metal workers	0 80	8	44
Roofers, felt and gravel	0 80	8	44
Painters and glaziers	0 90	8	44
Plumbers and steamfitters	1 20	8	44
Plumbers' and steamfitters' helpers	0 50	9	50
Electricians	1 10	8	44
Electricians' helpers	0 65	8	44
Mastic floor layers	0 65	8	44
Mastic floor layers' helpers— (preparing, mixing and heating material)	0 50	9	50

Construction of an addition and alterations to the Post Office at Red Deer, Alta. Name of contractor, Arthur S. Reed, Red Deer, Alta. Date of contract, Feb. 24, 1930. Amount of contract, $3,146.35 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour	
Bricklayers and masons	$1 45	8
Carpenters and joiners	1 00	8
Concrete finishers	1 00	8
Concrete layers	0 50	8-10
Concrete mixers	0 50	8-10
Electricians	1 10	8
Labourers—Common	0 45	8-10
Labourers—Building	0 50	8-10
Lathers—Metal	1 12½	8
Painters and glaziers	0 95	8
Plasters	1 40	8
Plasterers' helpers	0 77½	8
Plumbers and steamfitters	1 15	8
Plumbers' and steamfitters' helpers	0 75	8
Roofers—Felt and gravel	0 75	8
Sheet metal workers	1 12½	8
Sheet metal workers' helpers	0 80	8
Structural Steel workers	1 00	8
Teamsters with team and wagon	0 90	8-10
Truck drivers	0 50	8-10

Construction of a public building at Calgary, Alta. Name of contractors, Smith Bros. & Wilson, Ltd., Regina, Sask. Date of contract, January 3, 1930. Amount of contract, $1,294,770. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rate of wages. Not less than	Hours per day
	Per hour

Stamping Ink, etc.	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	97.35
J. E. Poole Co., Toronto, Ont.	46.51

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases, the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

Hamilton, Ontario.—The Publishers of Two Daily Newspapers and the International Typographical Union, Local No. 129.

Agreement signed following conciliation by the Department of Labour, to be in effect from January 1, 1930, to December 31, 1932.

This agreement is the same as the one previously in force and summarized in the Labour Gazette for April, 1927, an amend-

ment of which was summarized in the LABOUR GAZETTE for June, 1928, with the following exceptions:

Wages per week for journeymen in the composing rooms: for the year 1930, $43.25; for the year 1931, $43.50, for the year 1932, $43.75.

Wages per week for apprentices: for the year 1930, from $8.35 for first year to $24 for fifth year; for the year 1931, from $8.40 for first year to $24.10 for fifth year; for the year 1932, from $8.45 for first year to $24.25 for fifth year.

The Christmas bonus of one week's wages has been abolished.

Construction: Buildings and Structures

HALIFAX, N.S.—THE CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 625.

Agreement to be in effect from May 1, 1929, to April 30, 1932, and from year to year until 60 days' notice is given by either party. When such notice is given, the joint committee will meet within 30 days.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half from 5 p.m. to 10 p.m. on week days and from 1 p.m. to 5 p.m. on Saturdays; other overtime and work on Sundays and holidays, double time. No work on Labour Day.

Wages per hour for certified electricians: from May 1, 1929, to April 30, 1930, 80 cents; from May 1, 1930, to April 30, 1931, 90 cents; from May 1, 1931, to April 30, 1932, $1. Charge hand to be paid 10 cents per hour over journeymen's rate.

Not more than one helper allowed to a journeyman.

For work out of city, board, fare and travelling time to be paid.

No union member will be allowed to work after regular hours without the consent of the union and his employer.

HALIFAX, N.S.—CONSTRUCTIVE MECHANICAL TRADES EXCHANGE AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 56.

Agreement to be in effect from June 18, 1929, to April 30, 1930, and from year to year until either party gives notice 60 days previous to April 30. If such notice is given, the joint committee will convene within 30 days.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half for work from 5 p.m. to 10 p.m. on week days and from 1 p.m. to 5 p.m. on Saturdays. Other overtime and work on Sundays and holidays, double time. No work on Labour Day.

Wages per hour for journeymen plumbers and steamfitters: 85 cents. Charge hand to be paid 10 cents per hour above journeymen's rate.

Not more than one helper allowed to a journeyman.

For work out of city, fare, board and travelling time to be paid.

No union member will be allowed to work after regular hours without the consent of the union and his employer.

SAINT JOHN, N.B.—SAINT JOHN BRANCH OF THE CANADIAN CONSTRUCTION ASSOCIATION AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 919.

Agreement to be in effect from May 1, 1930, to April 30, 1931, and from year to year thereafter unless notice is given by either party three months before termination date.

Only members of the United Brotherhood to be employed if available, and union members will work only for members of the Canadian Construction Association, if they have work.

"It is further agreed by both parties that journeymen taking work 'on their own' must do so at a rate of 10 cents in excess of the current rate, except in the case of Government or Civic work."

The business agent of the union will be allowed access to all jobs at all reasonable times.

Hours: 8 per day; Saturday 4 hours during the months of June, July, August and September. Until Saturday half holiday is adopted by the majority of the building trades, union members agree to work on Saturday afternoons in other months of the year at straight time.

Overtime: time and one half from 5 p.m. to 10 p.m.; other overtime and all work on Sundays and holidays, double time. If, however, it is required that men work at any other time than during the regular hours which are from 8 a.m. to 5 p.m., then they will work 7 hours for 8 hours' pay and overtime rates will not prevail.

Wages for journeymen carpenters: 75 cents per hour. Foremen to receive at least 10 cents per hour extra. Any man incapacitated through age, accident or other cause may work for a wage mutually agreed upon if approved by the union.

Wages for apprentices: first year 25 cents per hour, second year 35 per cent of journeymen's wages, third year 45 per cent of journeymen's wages, fourth year 60 per cent.

MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE INTERNATIONAL ASSOCIATION OF PLASTERERS AND CEMENT FINISHERS, LOCAL NO. 33.

Agreement reached following decision of the arbitrator appointed by the Montreal Builders' Exchange and the union, to be in effect from January 1, 1930, to September 1, 1930. Three months' notice must be given by either party desiring a change.

Hours: 8 per day, 4 on Saturdays.

Overtime and work on Sundays and on four specified holidays, double time.

Wages for journeymen plasterers: $1.05 per hour.

Apprentices must not be more than 16½ years when beginning their apprenticeship. Not more than two apprentices allowed.

For work out of city, fare, board and travelling time during working hours to be paid for.

Union members will not quit work in sympathy with other unions without giving 24 hours' notice to the employer.

VANCOUVER, B.C.—CERTAIN ELECTRICAL CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 213.

Agreement to be in effect from May 1, 1929, to June 30, 1930, and thereafter unless either party gives 120 days' notice of change.

Only union members to be employed, if available. If none available, helpers may be employed until union members are secured. Union

members will not be permitted to work for any firms of contractors unless they have a legitimate place of business and have signed this agreement or an agreement sanctioned by the International Office, except by permission of the local union. Union members will not be allowed to work with non-union men of any craft or with members of organizations not affiliated with the Building Trades Department of the American Federation of Labour, except under the instruction of the local union.

Hours: 8 per day; from 8 a.m. to noon and from 1 p.m. to 5 p.m. or from 12.30 p.m. to 4.30 p.m.; 4 hours on Saturdays.

Overtime: all time worked outside of regular working hours and time worked on Saturday afternoons, Sundays and holidays, double time. No work on Labour Day, except to preserve life or property.

Shift work will only be permitted in the work of construction of concrete buildings. Men on night shifts to be paid double time for first shift and for each successive shift they will be paid 8 hours' wages for 7½ hours' work.

Wages for journeymen electrical workers: from May 1, 1929, to December 31, 1929, $1.12½ per hour; from January 1, 1930, to June 30, 1930, $1.17½ per hour.

Wages for helpers: 62½ cents per hour.

Wages per hour for apprentices: first six months 30 cents, next three months 40 cents, next three months 50 cents; after one year and until they have passed the examination for journeyman 62½ cents.

Not more than one apprentice to three journeymen, and not more than two apprentices in one shop or one apprentice on any job.

Apprentices must be under 21 years of age when beginning their apprenticeship, and they are to serve four years, after which they will try an examination to become journeymen.

Not more than one helper to be allowed for every three journeymen or fraction of three employed.

For work out of the city, fare, board and all expenses to be paid.

For work on high voltage wires, two journeymen must work together.

In case of any dispute, no strike or lockout to occur until the dispute has been discussed by the local union executive and the employers, such meeting to take place within two days of notice by either party.

Vancouver and Vicinity, B.C.—Certain Contractors and the United Association of Plumbers and Steamfitters, Local No. 170.

Agreement to be in effect from July 1, 1929, to June 31, 1931, and from year to year until either party gives 30 days' notice of change. When such notice is given, the Joint Committee will meet and come to a decision within 30 days.

This agreement is the same as the one which came into force June 27, 1927, and was summarized in the Labour Gazette for October, 1927, with the following change in wages:—

Wages per day for journeymen plumbers, steamfitters and gasfitters $9.50 from July 1,, 1929, to December 31, 1929, and $10 per day from January 1, 1930, to June 30, 1931. Junior plumbers and steamfitters to receive $2 per day less than journeymen when they first start to use tools, and their wages will be increased 50 cents per day at the expiration of each succeeding six months.

Hours are unchanged, remaining at 8 per day with the 5-day week.

Members of the Vancouver Sanitary and Heating Engineers' Association will have preference in the employment of men. When work is not available from members of the association, union members may work for other shops who guarantee union conditions.

Construction: Miscellaneous

British Columbia.—British Columbia Electric Railway Company Limited, Vancouver Power Company Limited, Vancouver Island Power Company Limited, Western Power Company of Canada Limited and the International Brotherhood of Electrical Workers.

This agreement came into effect on October 1, 1926, and was amended in July, 1928, and will remain in effect subject to 30 days' notice by either party.

Employees of these companies who are engaged in line and station construction work are included in the agreement summarized below under the heading "Transportation and Public Utilities—Electricity and Gas."

British Columbia.—Peterson Electrical Construction Company Limited, Hume and Rumble Limited and the International Brotherhood of Electrical Workers.

This agreement which covers contract work for line and station construction came into effect in October, 1926, but was later amended and will remain in effect subject to 30 days' notice.

The terms of the agreement are the same as that between the union and the B.C. Electric Railway Company mentioned above in so far as that agreement covers line and station construction work, with the exception that wages for all classes of work covered are 25 cents per day higher.

Transportation and Public Utilities: Electricity and Gas

British Columbia.—British Columbia Electrical Railway Company Limited, Vancouver Power Company Limited, Vancouver Island Power Company, Limited, Western Power Company of Canada Limited and the International Brotherhood of Electrical Workers.

This agreement came into effect on October 1, 1926, and was amended in July, 1928, and will remain in effect subject to 30 days' notice by either party.

This agreement is the same as the one previously in force and summarized in the Labour Gazette for November, 1925, with minor changes in conditions of work on high voltage wires, and with changes in wages for the following classes:—

Wages per day for Line Department and Wiremen: lead-covered cable foreman, $9.50, journeyman cable splicer $8.75, foreman lineman $9.25, sub-foreman lineman $8.50; journeyman lineman, journeyman wireman, armature winder, transformer winder, troubleman and repairman $7.75. Wages per day for apprentice cable splicer: beginners $7.75, after one year $7.95, after two years $8.25, after three years $8.75.

AGREEMENT AS TO WAGES AND WORKING CONDITIONS FOR EMPLOYEES ON THE MONTREAL STREET RAILWAY

AN agreement has been signed between the Montreal Tramways Company and Division 790 of the Amalgamated Association of Street and Electric Railway Employees, representing the employees, to be in force from January 1, 1930, to June 30, 1933, and from year to year thereafter, subject to 60 days' notice. The previous agreement which came into effect on June 30, 1924, and was summarized in the LABOUR GAZETTE, December, 1924, was extended to June 30, 1930, and the new agreement therefore cancels the previous contract for the balance of its term. The principal changes in conditions are an increase in wages for motormen and conductors from 51 cents per hour to 55 cents for the maximum or final rate after two years, and from 42½ cents to 45 cents for the starting rate; most of the other classes also receive an increase in wages of 4 cents per hour. For car barn employees, hours were reduced from 10 to 9 per day with time and one-half for overtime work instead of time and one-quarter as before. Hours of labour for other classes are unchanged, being 10 per day for motormen and conductors and 9 hours for the most of the other classes, with shorter day for Saturday and Sunday.

The text of the agreement follows:

AGREEMENT ENTERED INTO THIS 9th day of December, 1929, BETWEEN THE MONTREAL TRAMWAYS COMPANY, (hereinafter called "The Company") AND THE EMPLOYEES OF THE MONTREAL TRAMWAYS COMPANY, DIVISION 790 (who, by their Committee, represent the Employees of the Company herein specified).

Witnesseth:—

That in operation of the railways and properties of the Company, both Parties herewith mutually agree as follows:—

General Working Conditions

1. The number of hours to constitute a day's work, the general working conditions, and allowances for overtime, in all Departments (unless otherwise specified herein) will, for the period of this Agreement, remain the same as provided for in the Agreement dated July 8, 1924.

2. The Company agrees to give free transportation to all Company's employees going to and from duty and in order to render possible the carrying out of this stipulation, the Company will furnish means of identification.

3. Where possible, suitable waiting rooms will be supplied for platform employees where they report for work and where shifts are changed.

4. The Company agrees to give all employees leaving its service a certificate of service.

5. Regular rates of wages will be paid to all employees for time taken or lost when called upon to give their version at the Claims Department, or at the Training School, or to be witnesses in case of accident or other incident, if they are held blameless in the matter.

6. If any employee of the Company is temporarily laid off or dismissed, he will have the right, through the Business Agent, to submit his case to the Head of the Department, and further to the Management of the Company, and if, after investigation, it is found that he is not guilty of the offence, he will be reinstated and will receive pay for the lost time.

7. No employee will be dismissed or suspended from his work before having had an opportunity to give his side of the question to the Superintendent, or other authorized officer, of his Department, except in recognized serious offences, such as, collisions, dishonesty, intemperance or disobedience of orders and regulations.

8. The Company shall make promotions, with justice to all, considering ability and seniority.

9. The Company agrees not to make any discrimination which would be to the disadvantage of an employee on account of his being or not being, a member of a Union.

10. The Company agrees to give to the Officers of the Union permission to absent themselves in the interests of the organization and the welfare of the employees, each time such a request is made, providing sufficient time is given in which to grant this request.

11. The Company agrees that if a member of a Union who is, or will later be elected an officer, or delegate of said Union, which will necessitate absence from his regular employment, shall enjoy at his return, the same rates and privileges as if he had not been absent.

12. The Company will allow the Union President or Business Agent to visit any Division, when it is necessary for the good of the employees, and discuss with the Head of the Department, by appointment, all questions relative to the welfare of the members of the Union and questions of general interest.

13. The Union may post up in Depots, Shops or Power Houses notices calling meetings of the Union, but no other document may be posted without permission from Heads of Departments.

14. The Company does not object to the collection of dues being made by the Union on the Company's property, provided it does not interfere with the Company's affairs.

15. Employees after one year's service shall receive the standard rates of their classification.

Working Conditions Regarding Conductors, Motormen, One-Man Car Operators, Chauffeurs, Switchmen and Hillmen

16. All car runs will be in two laps, as much as possible, to be worked inside of fourteen consecutive hours.

17. All spares who are assigned, at call, to take out cars at certain hours and who report in time to take out such cars, will be paid from the time such cars should have gone out, when the time for taking out cars is changed. If for some reason, such cars do not go out they shall be paid two hours for having reported.

18. No employee shall be obliged to book on a car making less than eight hours for day runs and seven hours on the relief.

19. No employee finishing his work at, or after, midnight shall be required to report again before nine a.m., and this will apply equally to spare men.

20. When an employee, after completing a run, shall have worked more than twelve hours, within a working day, he shall be entitled to nine hours' rest.

21. All cars being taken out and back to the barns by the same crew, known as completed runs, shall be paid an allowance.

Any single completed run booked to a crew will carry an allowance of 45 minutes.

When two completed runs are combined and booked to a crew, these runs will carry an allowance of 30 minutes each.

When three completed runs are combined and booked to a crew, these runs will carry an allowance of 30 minutes each.

All unbooked completed runs will carry an allowance of 45 minutes.

22. *Extended Runs:*—Crews on regular scheduled runs, who are required to work for a longer period, in emergencies, will be paid on a basis of time and a half for the extra time worked, up to a maximum of two hours at overtime rate.

Regular rates only will be paid on the extension of completed runs when these are entitled to an allowance under Clause No. 21.

Extra Time on Account of Delays:—When cars are prevented from getting into the car houses on schedule time because of stoppage, due to failure of power or other cause beyond the Company's control, extra time will be paid at regular rates but only when delay is ten minutes or more.

23. Spare runs will be given on bell signals, as follows:—One bell for Conductors, two bells for Motormen and three bells for Operators.

24. The seniority list of spares will be posted well in view in all Divisions.

25. When Conductors, Motormen, Chauffeurs or Operators have chosen, or been assigned to regular schedule runs and parts of such runs are suppressed, they shall receive the full amount of time they would have earned by these runs, the same as if they had completed same, unless similar work is offered, day work to day men and relief work to relief men, and in case this is not satisfactory to either parties, new lists will be made within seven days.

26. Lists will be made in all Divisions and cars booked at least every two months. Time-tables and choice of runs will be posted in the Divisions at least twenty-four (24) hours before the date fixed for the list. Any change made during these twenty-four hours will be posted separately.

27. Uniforms for motormen and conductors shall consist of Summer and Winter caps, one complete suit and one pair of Winter trousers each year; one overcoat every second year.

The Company shall furnish, free of cost, uniform clothing and caps, for Conductors, Motormen and Autobus Chauffeurs who have been in the service of the Company for a period of three years.

The charges for uniforms, as at present, made for Conductors, Motormen and Chauffeurs, who have been less than three years in the service of the Company will be continued.

28. When an employee's uniform is damaged or destroyed in the discharge of his duty, same shall be repaired or replaced by the Company.

29. All cars left in yards or in unheated sheds will be heated by the Company at least an hour before pulling out and all cars in operation will be sufficiently heated from October 15th, to May 15.

30. If a carrying-men car is delayed, causing an employee to be late in reporting, he will not be placed on the list of those absent from duty, and if he arrives before the car is taken out, he will have the right to take his place on it, even though same has been assigned to a spare.

Employees under these conditions will telephone, if possible to do so, to the clerk of their respective offices, explaining the cause of the delay, in order not to be placed on the absent list.

31. When an employee is called for service on the snow ploughs, mechanical sweepers, levelling machines or salt cars, and kept on this work in such a manner that it is inadvisable for him, due to want of rest, to take his regular run according to timetable, the fraction of day lost on his regular run will be paid him, in addition to the time he has been employed in clearing away snow, provided he has not already made the equivalent time on snow work.

32. Conductors, Motormen, Operators, Chauffeurs, Car-Starters and Assistant Car-Starters will be entitled to one day's rest in seven.

33. The Company agrees to allow employees ordinarily working on passenger cars who, for one reason or another, may wish to work on freight cars, to go back on passenger cars each time lists are made, should they so desire.

34. For the convenience of employees the Company will provide lavatory accomodation as near as possible to the terminus of various lines and shall maintain same in sanitary condition.

35. It will be left to the discretion of the Superintendent of Transportation to choose competent employees for special work, such as cranes, shunters, store cars, or any other car where special training is necessary.

36. If practicable, double windows shall be installed on the outside of windows and doors of rear vestibules on all cars equipped with vestibule folding doors and Conductors' platforms will be enclosed to a height of two feet.

37. All passenger cars will be supplied with seats for motormen and conductors which they will have the right to use at their discretion, at all hours of the day or night, but the Company reserves the right to make specific exceptions.

38. Car-Starters, Assistant Car-Starters, Switch Inspectors. Hillmen, Construction Watchmen on streets, and Section Foremen will be supplied with rubber coats and rubber boots.

39. In the Shops, Barns and Power Houses the Employees will be allowed five minutes to wash before the bell rings for discontinuing work.

40. Men employed in the Power, Mechanical or Construction Departments, who will receive an urgent call at night, outside of regular hours, shall be paid time and a half for the work they will perform with a minimum of not less than four hours.

41. Section foremen will not be held responsible for trouble on their Division, which occurs

after 11 p.m., unless they are called for duty.

42. The Company will supply shanties for men working in the Construction Department and these shanties shall be heated in cold weather.

43. During the Winter when work is scarce, Division Foremen will distribute the work as far as possible, according to seniority and men from each Division shall have preference in their respective Divisions.

Working Conditions: Youville Shops and Car Barns

44. Fifty hours will constitute a working week for employees in the Youville Shops; nine hours per day and five hours on Saturday. Overtime will be paid at the rate of time and one-half.

45. Employees working in the car barns shall work nine hours per day and receive time and one-quarter for Sundays and legal holidays. No employee will be required to work more than two Sundays in a month, unless called for emergency work, in which event he will be paid time and one-half.

For all time worked over 10 hours on week days employees on hourly rate will be allowed time and one-half.

46. A maximum, minimum, and if desirable, an intermediate rate of wages will be established for each classification by the Company.

47. When an employee is promoted from one position to another he shall receive the rate of wages his new position calls for.

48. Employees working on Tool Cars on emergency calls shall be supplied, free-of-charge, with rubber boots, rubber gloves, raincoats and winter coats.

49. All employees working in Shops or Car Barns shall have first consideration for promotion where they are as competent as a new hand.

All apprentices in the different trades shall have an increased rate of pay each year, if qualified, and shall not work as apprentices for a period of more than three years.

Overhead Department

50. Where possible, shanties will be provided for gangs of linemen or groundmen, who are working on a line or on new work, that will last for six days or more, and these shanties shall be heated in cold weather.

Wages—Transportation Department

51. A. Conductors, Motormen and Car Starters:— per hour

First year's service	45c.
Second year's service	50c.
After two year's service	55c.

B. Autobus Chauffeurs:— per hour

All autobus chauffeurs in the service of the Company prior to January 1, 1930, will be paid	60c.
First year's service	56c.
Second year's service and thereafter	60c.

Special Allowances

52. Conductors, Motormen, Car-Starters, Autobus Chauffeurs and Operating employees in the Power Houses and Substations shall be paid five cents advance on regular rates for work on Sundays and the following Holidays: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving and Christmas.

53. Five cents advance on regular rates will be paid to operators working on One-man cars.

54. Five cents advance on regular rates will be paid to employees requiring special training for working on mechanical cars, such as crane, shunter and store cars and to employees switching railroad cars for suburban lines.

55. Five cents advance on regular rates will be paid to all employees training platform men.

56. Five cents advance on regular rates will be paid to all employees working on cars for the removal of snow.

General—Other Departments

57. Permanent employees, on an hourly rate, in all other departments of the Company, after one year's service, will be paid a flat increase of four (4) cents per hour.

This Agreement will remain in force from January first, to June 30, 1933, and continue from year to year thereafter. Amendments may, however, be asked for, by either party at the end of the three and a half year period, or any subsequent period thereafter, if necessitated by changed economic conditions. Notice of sixty days, of any change desired, to be given.

For the good understanding, and in the interests of both parties, the Company agrees to meet a Committee, representing the Employees to discuss and settle all questions that might be submitted and that have not been foreseen in this Agreement.

Clothing Workers and Minimum Wages in Quebec

The Quebec locals of the Amalgamated Clothing Workers of America recently submitted to the government of the province of Quebec the following proposed changes in the provisions of the Women's Minimum Wage legislation of the province:—

(1) That the powers vested in the Commission be extended so as to include the regulation of hours of labour; (2) that commercial establishments be placed under the Commission; (3) that labour be represented in the conferences by various groups of organized labour in each district; (4) that official records be kept showing the experience of apprentices or learners; (5) that proper inspection of factories and commercial establishments be provided with a view to the maintenance of the wage scales and the other orders of the commission, the present number of inspectors being inadequate; (6) that legislation be enacted to deal in a summary manner with employers who infringe the orders of the Commission; (7) that the public representatives be chosen upon the joint recommendation of employers and employees, and in the case of disagreement, that these representatives be chosen with regard to the wishes of both employers and employees; (8) that at least one woman become a member of the Commission.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was toward somewhat lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being slightly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.83 at the beginning of February, as compared with $11.88 for January; $11.15 for February, 1929; $11.03 for February, 1928; $11.23 for February, 1927; $11.50 for February, 1926; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $16.92 for June, 1920 (the peak); $15.77 for February, 1920; $12.54 for February, 1918; and $7.75 for February, 1914. The prices of eggs, butter, cheese, flour, beans, evaporated apples and coffee were lower, while the prices of beef, mutton, pork, bacon, prunes and potatoes were higher. Including the cost of fuel and rent with that of foods the total budget averaged $22.12 at the beginning of February, as compared with $22.17 for January; $21.41 for February, 1929; $21.25 for February, 1928; $21.46 for February, 1927; $21.87 for February, 1926; $21.19 for February, 1925; $21.18 for February, 1924; $21.17 for February, 1923; $21.07 for February, 1922; $24.85 for February, 1921; $26.92 for July, 1920 (the peak); $24.71 for February, 1920; $19.80 for February, 1918; and $14.54 for February, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 94·0 for February, as compared with 95·6 for January; 95·7 for February, 1929; 96·8 for February, 1928; 97·6 for February, 1927; and 102·2 for February, 1926. One hundred and ten prices quotations were lower, thirty-three were higher and three hundred and fifty-nine were unchanged.

In the grouping according to chief component materials all eight main groups declined, the Vegetables and Vegetable Products group because of lower prices for grains, milled products and tea; the Animals and their Products group, due mainly to declines in the prices of furs, butter and fresh eggs; the Textile and Textile Products group, due to lower quotations for raw cotton, raw wool, hemp and sisal; the Wood, Wood Products and Paper group, because of declines in the prices of shingles, hemlock lumber and ground wood pulp; the Iron and its Products group, due to lower quotations for steel sheets; the Non-Ferrous Metals and their Products group, because of declines in the prices of lead, silver, tin and zinc; the Non-Metallic Minerals group, due to lower prices for sand and gravel, and coal; and the Chemicals and Allied Products group, due to lower prices for shellac.

In the grouping according to purpose consumers' goods were lower, due to lower prices for fresh eggs, flour, tea and silk hosiery. Producers' goods also declined, due to lower prices for building materials and for materials for the textile and clothing industries, for the furs and leather goods industries, for the milling and other industries, for the metal working industries, for the chemical using industries, as well as for miscellaneous producers' materials. Materials for the meat packing industries were slightly higher.

In the grouping according to origin both raw and partly manufactured goods and fully and chiefly manufactured goods were lower, the former due to lower quotations for grains, tin, wool, furs and cotton, which more than offset higher quotations for live stock and rubber, and the latter due mainly to lower prices for butter and flour. Canadian farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods, and groceries in each city except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with working-

men's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1927, and monthly since January, 1928. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6; 1927, 73.4; 1928, 71.7; 1929, 71.4.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures

(Continued on page 340)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

(Continued from page 332)

down to 1929. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices were again higher, sirloin steak being up from an average of 35·9 cents per pound in January to 36·3 cents in February; round steak from 30·8 cents per pound in January to 31·4 cents in February: rib roast from 28·7 cents per pound in January to 29 cents in February; and shoulder roast from 22·7 cents per pound in January to 23·1 cents in February. Mutton was up from an average of 31 cents per pound in January to 31·3 cents in February. Both fresh and salt

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

pork were higher, the former advancing from 29·8 cents per pound in January to 30·1 cents in February and the latter from 27·2 cents per pound in January to 27·4 cents in February. Bacon was also slightly higher at an average price of 39·6 cents per pound. In fresh fish cod steak and white fish were lower, while halibut advanced.

Eggs showed a seasonal decline in most localities, fresh being down in the average from 64·4 cents per dozen in January to 59·7 cents in February. Milk was unchanged at an average price of 12·9 cents per quart. Butter was slightly lower, dairy being down from 44 cents per pound in January to 42·3 cents in February and creamery from 47·5 cents per pound in January to 46·4 cents in February. Cheese was also slightly lower at an average price of 32·6 cents per pound.

Bread was unchanged at an average price of 7·8 cents per pound. Flour was slightly lower at 5·2 cents per pound, as compared with 5·3 cents in January. Beans declined from an average of 10·4 cents per pound in January to 10·1 cents in February. Higher prices for potatoes were reported from most localities, the average being up from $2.34 per ninety pounds in January to $2.51 in February. Evaported apples declined from 21·3 cents per pound in January to 20·9 cents in February. Prunes were also lower at 16·4 cents per pound. Granulated sugar was lightly lower at 7·2 cents per pound, as compared with 7·3 cents in January. Anthracite coal was little changed at an average price of $16.19 per ton. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, moved toward lower levels, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, averaged $1·174 per bushel in February, as compared with $1·301 in January. Early in the month prices advanced somewhat but after the second week severe declines set in and wheat prices were carried almost to the low levels reached toward the end of May, 1929. It was stated that the action of the Provincial Governments in Manitoba, Saskatchewan and Alberta in guaranteeing advances by the banks to the wheat pool and also the action of the United States Federal Farm Board in forming a Grain Stabilization Corporation were expected to have a steadying influence on prices but in spite of this the poor export demand, together with the pressure of supplies from other sources, notably Russia and Australia, caused a drastic decline. Coarse

grains also were lower, western barley being down from 56·7 cents per bushel to 50·8 cents; flax from $2·519 per bushel to $2.50; and rye from 85·4 cents per bushel to 72·6 cents. Western oats were unchanged at 59·5 cents per bushel. Flour prices moved in sympathy with wheat prices, being down from $8·547 per barrel to $8·20. Rolled oats at Toronto declined from $3.80 per ninety pound bag to $3.45. Bran and shorts also were lower, the former being down from $35.25 per ton to $34.87 and the latter from $37.25 per ton to $36.87. Granulated sugar at Montreal was unchanged at $5.27 per hundred pounds. Raw rubber was slightly higher, Ceylon averaging 15·8 cents per pound, as compared with 15·13 cents in January. Good steers at Toronto advanced from $9.75 per hundred pounds to $9.76½ and at Winnipeg from $9.13 per hundred pounds to $9.41. Veal calves at Toronto declined from $15.78 per hundred pounds to $14.47. Bacon hogs at Toronto were up from $13.31 per hundred pounds to $14.06, while lambs were down from $13.31 per hundred pounds to $12.44½. Beef hides declined from 14-16½ cents per pound to 13-14½ cents and calf skins from 16½-17 cents per pound to 15-15½ cents. In raw furs weasel declined from $1.40-$1.85 per skin to $0.85-$1.25, while muskrat was down from $1.56-$1.87 per skin to $1.12-$1.50. Fresh eggs at Montreal declined from 60·3 cents per dozen to 49·3 cents and at Winnipeg from 56·9 cents per dozen to 49·5 cents. Raw cotton at New York again declined, the price being 15·64 cents per pound, which is the lowest level reached since April, 1927, when the price was 14·76 cents per pound. This recession was said to be due to the generally lower levels prevailing for agricultural commodities and to the competition of foreign countries. The decline in raw wool prices continued, being down from 22-23 cents per pound in January to 21 cents in February. British Columbia shingles declined from $3.50 per thousand to $3.20 and hemlock lumber from $27.50 per thousand feet to $27. Steel sheets declined from $4.35 per hundred pounds to $4.23. Non-ferrous metals were lower, tin declining from 44·25 cents per pound to 43·75 cents and lead from $6.50 per cwt. to $6.42½. Quotations for sand and gravel at Vancouver were $1 per cubic yard, showing a decline of 10 cents from the January level. Domestic coal at Edmonton declined from $3.75 per ton to $3.50. Shellac was down from 34·27 cents per pound in January to 30·5 cents in February.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1926 = 100, was 78.8 for January, a decline of 1.1 per cent from December, and continuing the steady downward trend of prices. All groups contributed to the decline for the month with the exceptions of "other foods" (foods other than cereals and meat and fish) and iron and steel, which two groups were very slightly higher. The most marked falls were in cereals and in wool.

The *Economist* index number, on the base 1927 = 100, was 86.1 at the end of January which is 9.1 per cent lower than at the same time last year and 2.5 per cent lower than at the end of December. Compared with the previous month, textiles declined over 7 per cent, cereals and meats 3.3 per cent and miscellaneous commodities 1.3 per cent. Minerals and foods other than cereals and meat were practically unchanged.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914 = 100, was 164 at February 1, a decline of 1.2 per cent for the month, due entirely to lower food prices which amounted to 1.9 per cent, the chief decreases being in butter, eggs and fish. Rent, clothing, fuel and light and sundries were unchanged.

Irish Free State

COST OF LIVING.—The official quarterly index number, on the base July, 1914 = 100, was 179 in January, showing no change from October. In this period, food declined one point from 173 in October to 172 in January.

France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base July, 1914 = 100, was 576 for January as compared with 588 for December and continuing the steady decline since last September. All groups of commodities showed declines for the month with the exceptions of minerals and metals and miscellaneous commodities which were unchanged.

Cost of Living.—The official index number of the cost of living at Paris, on the base 1914=100, was 565 for the fourth quarter of 1929, as compared with 555 for the previous quarter. There were increases in the groups food, heat and light and sundries, while rent and clothing were unchanged.

Germany

Cost of Living.—The index number of the Federal Statistical Office, on the base 1913-1914=100, was 151·6 for January, a decline of 0·7 per cent from December, due chiefly to lower prices for food amounting to 1·3 per cent for the group; other groups were practically unchanged.

Italy

Wholesale Prices.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 453·21 for January, continuing an unbroken decline since last March and being a fall of 1·3 per cent from the December level. Every group was lower with the one exception of miscellaneous vegetable products.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 93·4 for January, which is nearly 4 per cent lower than for the same month last year, and is the lowest point reached for any month since April, 1922. Compared with December, the index number of wholesale prices for January was 0·8 per cent lower. With the exceptions of building materials and miscellaneous commodities which were unchanged, all groups contributed to the decline.

The *Annalist* index number, on the base 1913=100, was 137·4 for February, a fall of 1·8 per cent from the January level. With the exception of building materials which were slightly higher, all groups declined.

Bradstreet's index number showing the cost of a list of 106 commodities was $11·2235 at March 1, a decrease of 2·5 per cent from the level at February 1, and a decrease of 13·6 per cent from the same date last year. Textiles showed the most notable decline, principally due to a drop in cotton prices. Other groups showing decreases were breadstuffs, live stock, provisions, hides and leather, metals, oils, building materials and chemicals and drugs. On the other hand, fruits, coal and coke, naval stores and miscellaneous products advanced slightly.

Dun's index number showing the estimated *per capita* consumption of each of the many articles included in the compilation was $180·939 at March 1, as compared with $184·426 at February 1. Every group was lower than for the previous month, the greatest decrease being in dairy and garden produce.

Cost of Living.—The index number of the Massachusetts Special Commission on the Necessaries of Life, on the base 1913=100, was 159·4 for January, a decline of 0·7 per cent from the previous month, due chiefly to lower prices for food and clothing.

PRICES AND PRICE INDEXES, 1913-1928

Annual Report of Dominion Bureau of Statistics on Prices of Commodities, Securities, Services, Import and Export Valuations

THE Dominion Bureau of Statistics recently issued its annual review of prices of commodities, securities, etc., in Canada and other countries, covering the year 1928, with index numbers and comparative tables back to 1913. This report is the seventh in the series, the first, issued in 1923, bringing out an index number of wholesale prices in Canada to replace that formerly issued by the Department of Labour, and therefore continuing the series of reports on wholesale prices in Canada issued by the Department from 1910 to 1917. These statistics were transferred to the Bureau in accordance with the Statistics Act passed in 1918 (Labour Gazette, June, 1923, p. 689). The index numbers of wholesale prices have been given from month to month in the Labour Gazette by groups and summary tables, and also for each year in the annual review on "Prices in Canada and Other Countries" issued as a supplement to the Labour Gazette in January.

In 1928 the Bureau adopted 1926 as the base year for most of its index numbers. The statistics of wholesale prices are grouped according to chief component material, according to purpose, and according to origin. The current statistics, with comparative figures back to 1913, are given in the regular article on Prices, Retail and Wholesale, in Canada, February, 1930, elsewhere in this issue. All index numbers in the report are brought down to date each month and issued by the Bureau in monthly bulletins.

The report also contains an index number of wholesale prices in Canada back to 1867, not, however, divided into groups, with prices in 1913 as 100. The number of commodities

included in this calculation is 502 for the period back to 1926, 236 from 1913 to 1926, but the number of commodities for which figures are available for the earlier years is smaller. The resulting figures are given in the accompanying table.

The report also contains an index number of Retail Prices, Rents and Cost of Services, covering the period back to 1913, constructed to measure the general movement in retail prices in the Dominion as a whole in comparison with other general index numbers constructed by the Bureau. The weighting system used is based on the total consumption of each commodity, and the resulting figures, therefore, measure the changes in the average cost of living in the Dominion as a whole as distinguished from that of any particular class or section. To a considerable extent the data used by the Bureau are the same as those used by the Labour Department, being collected in co-operation. The difference in the systems of weighting used for this index number and that constructed by the Department of Labour to indicate trends in costs for workingmen's families appears to have more result in the "Sundries" group, in which the Bureau includes a great variety of commodities and services. The accompanying table gives the yearly figures from 1913 to 1928, as shown in the report, with the figures for 1929 added.

INDEX NUMBERS OF RETAIL PRICES, RENTS AND COSTS OF SERVICES, 1913-1929.

(1926=100)

Year.	Total Index	Food Index	Fuel Index	Rent Index	Clothing Index	Sundries Index

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain and Northern Ireland

During January, the number of disputes which began was 33, and 8 disputes were still in progress from the previous month, making a total of 41 disputes in progress, involving 9,400 workpeople and resulting in a time loss of 45,000 working days. Of the 33 disputes

beginning in the month, 8 arose out of proposed reductions in wages, 12 on other wages questions, 9 on questions respecting the employment of particular classes or persons and 4 on other questions. Settlements were reached in 28 disputes, of which 5 were in favour of workpeople, 9 in favour of employers and 14 ended in compromises; in 2 other disputes, work was resumed pending negotiations.

British India

A strike of 17,500 employees of the Great Indian Peninsula Railway was reported to have begun on February 4. No settlement was reported, but after a few days train service was reported to be nearly normal.

Netherlands

Preliminary figures for the year 1929, show the number of disputes as 217, involving 1,200 employers and 15,700 workers. The time loss for the year is estimated at 612,000 working days.

United States

The number of disputes beginning in December was 32 and 45 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 7,856 and the time loss 234,052 working days for the month.

A strike involving about 22,000 members of the International Ladies' Garment Workers' Union in the dress manufacturing industry in New York City lasted from February 4 to February 12. The strike was for the abolition of sweatshops, and through the mediation of the Lieutenant Governor of New York a settlement was reached providing for the establishment of an impartial commission appointed by the Governor of New York for the settlement of all future disputes, and for the abolition, to a large extent, of the sweatshop. This strike was very similar in purpose and in its result to that of members of this same union in the cloak and suit branch of the industry which occurred in July last.

During February, a strike of 1,500 taxi-cab drivers occurred at Pittsburgh, Pennsylvania, and was featured by a number of riots resulting in one death and a number of serious injuries.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1929

THE accompanying tables provide an analysis of the fatal accidents to work people in Canada in the course of their employment during the calendar year 1929, according to causes, provinces and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each, appeared in the Labour Gazette, May, August and November, 1929, and February, 1930. The tables include such fatalities from industrial diseases as are listed with fatal accidents by workmen's compensation boards, etc.

The record is compiled from reports from the following governmental authorities: the Board of Railway Commissioners; the Explosives Division of the Department of Mines, Ottawa; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Alberta and British Columbia; the Ontario Factory Inspectors; the Ontario Railway and Municipal Board; the Saskatchewan Department of Railways, Labour and Industries; and the British Columbia Department of Mines. Reports were also received from the correspondents of the Labour Gazette, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. On the whole, however, the information obtained from press reports is used merely to supplement information received from official sources.

Fatalities by Industries

The total number of fatalities recorded for the year was 1,682, the fatalties being attributed to the various industries in the following proportions: transportation and public utilities, 353, or 20.99 per cent of the total; construction, 289, or 17.18 per cent; manufacturing, 236, or 14.03 per cent; mining non-ferrous smelting and quarrying, 226, or 13.44 per cent; logging 217, or 12.90 per cent; agriculture, 152, or 9.04 per cent; service, 108, or 6.42 per cent; trade, 50 or 2.97 per cent; and finance, 1, or 0.06 per cent.

The tables also include summary figures for 1928, being a final revision of the figures published in the Labour Gazette, March, 1929, by the inclusion of accidents occurring in 1928, reported too late for incorporation

into the annual statement. These accidents were shown in detail in the supplementary lists in the LABOUR GAZETTE, May, August and November, 1929, and February, 1930. The figures for 1929, being to some extent still incomplete, are accordingly to some extent not comparable with the completed figures for 1928.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences; for example, in logging, the increase in the number of fatalities, may be largely due to there being more men engaged in this industry, while the decrease in fatalities in the

mining, non-ferrous smelting and quarrying group is explained by the fact that the 260 fatalities in 1928 included 39 miners who were suffocated in the Hollinger disaster. The decrease in fatalities in agriculture may be largely accounted for by the fact that fewer men were required in 1929 for harvest work in the prairie provinces. In the manufacturing group there was an increase in fatal accidents from 201 to 236, in the construction group from 250 to 289, which may be attributed in part to an increase in employment in these industries for the year.

Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 480, came under the category "by moving trains, vehicles, etc.". This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles, and horse drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 136, appear under the heading covering persons being struck or run over by, or crushed by or between, cars and engines, 71 of these victims being engaged on steam railways. Also, 111 were caused by automobiles and other power vehicles and implements, 70 were in connection with water craft (30 being in fishing and trapping and 21 in water transportation); 64 were due to derailments and collisions (43 in steam railways); 36 were caused by animal drawn vehicles and implements (20 of which were in agriculture, accidents primarily caused by animals being classified elsewhere); 29 were caused by mine and quarry cars; 20 by persons falling from or in cars or engines; and 14 fatalities occurred in aircraft.

Next in order as a cause of fatalities came "falls of persons" 325 in number, including 128 falls into pits, shafts, harbours, rivers, etc.

TABLE I.—FATAL INDUSTRIAL ACCIDENTS IN

(some of which resulted in drowning), 94 falls from elevations, 29 due to collapse of support, 20 from ladders, 15 from loads, etc., 15 on sharp objects, 8 into tanks, vats, kilns, etc.; 7 due to falls on the level, 5 down stairs and inclines, and 4 into holds of vessels.

Fatalities numbering 246 were caused by "falling objects" of which 82 were due to falling trees and limbs, 59 to objects falling in mines and quarries, 54 to objects falling from elevations, loads, piles, 27 to breaking or loosening of straps, cables, etc.; 19 to collapse of structure, and 5 to other falling objects.

"Dangerous substances" caused 217 fatalities, of which 93 were due to explosive substances, 63 to electric current, 24 to hot and inflammable substances and flames, 19 to steam escapes, boiler explosions and compressed air, and 6 to conflagrations.

There were 78 fatalities caused by handling of heavy or sharp objects and 17 by the use of tools. Working machines caused 59, prime movers caused 40, and 30 were due to hoisting apparatus. There were 26 fatalities caused by striking against or being struck by objects, of which 3 were due to striking against objects and 23 to being struck by objects. Animals caused 43 fatalities including 34 caused by horses.

The category "other causes" includes 121 fatalities, of which 2 were deaths following infection, 30 due to industrial diseases, strains, etc.; 13 to drownings of which no particulars were available, 6 to shooting and violence, 41 to cave-ins, land slides, ice jams, etc.; 24 to lightning, frost, storms, sunstroke, and 5 accidents of which no particulars were available.

Fatalities by Provinces

The classification of fatal accidents according to provinces shows that the largest number, 603 occurred in Ontario. There were 375 in Quebec, 293 in British Columbia, 109 in Manitoba, 101 in Alberta, 91 in Nova

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents are assigned to the province in which the various ships were registered and exclude accidents to Canadian fishermen and seamen on boats registered in another country.
For particulars of accidents, see quarterly statements in the Labour Gazette for May, August, November 1929 and February 1930. (b) Revised figures for 1923.

Scotia, 54 in New Brunswick, 46 in Saskatchewan, 8 in Prince Edward Island and 2 in the Yukon and Northwest Territories. In Ontario, the largest proportion of fatalities occurred in the group transportation and public utilities, where there were 124, with 122 in construction, 99 in manufacturing, 75 in mining, non-ferrous smelting and quarrying, 61 in agriculture, 49 in logging, 44 in service, 24 in trade, 4 in fishing and trapping, and 1 in finance. In Quebec, the largest number, 91, was also in transportation and public utilities, with 77 in construction, 70 in manufacturing, 48 in logging, 29 in service, 24 in agriculture, 18 in mining, non-ferrous smelting and quarrying, 14 in trade and 4 in fishing and trapping. In Nova Scotia and Alberta, there were respectively 31 and 36 mining fatalities, and no other industry suffered so many fatalities in these provinces. In British Columbia, there were 101 fatalities in logging, 52 in mining, 48 in transportation and public utilities, etc. In Manitoba the largest number of accidents, 21, was in transportation and public utilities, while in Saskatchewan the greatest number, 17, was in agriculture.

Accident Frequency in Certain Industries

The table of fatalities by months shows the highest point to have been in August, when there were 181, the average per month being 140. The low point for the year, 82, was reached in February. This table gives estimates of the number of employees in certain industries, the latest figures available being given in each case. The frequency of fatalities for the industries for which estimates were available was highest for logging, being 5.45 per thousand for the year, and second for mining, non-ferrous smelting and quarrying, being 2.52 per thousand. Construction accidents showed a frequency of 1.56 per thousand, and manufacturing 0.40 per thousand. The total number of employees in the group transportation and public utilities, is not available, but by groups the frequency rates were: steam railways, 0.91; street and electric railways, 0.42; water transportation, 2.80; local transportation, 0.88; electricity and gas, 2.38; telegraphs and telephones, 0.31.

TABLE III.—FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1929 BY MONTHS AND INDUSTRIES

IMMIGRATION TO CANADA DURING THE CALENDAR YEAR 1929

THE accompanying tables, compiled from information supplied by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the calendar year 1929, with some comparative figures for 1928. Out of a total of 164,993 immigrants 66,801 or 41 per cent were British, 31,852 or 19 per cent were from the United States and 66,340 or 40 per cent from other countries.

Statistics of Electric Railways in Canada in 1928

A bulletin entitled Statistics of Electric Railways of Canada, compiled and published by the Transportation Branch of the Dominion Bureau of Statistics, states that electric railways in Canada carried 808,023,615 passengers during 1928, being an increase over the 1927 traffic of 26,625,421 passengers, or 3·4 per cent. These passengers include those carried on electric railway cars and on buses operated by the electric railway companies. The report, which is for the year ended December 31, 1928, indicates that gross revenues amounted to $55,632,761, or an increase of $2,126,360, or 4 per cent. Operating expenses were heavier than in 1927 by $1,166,151 and the net operating revenue amounted to $16,850,042, or $960,209 more than for 1927. The average passenger fare for all railways, computed by dividing the total passenger revenue by the total number of passengers carried was 6·27 cents as against 6·25 cents for 1927. Dealing with the financial aspect, the report states that of the fifty-nine railways reporting, including the Hamilton and Dundas Street Railway, which was not operated but leased its facilities, and the Yarmouth Light and Power Company, which operated only to August 20, eleven railways failed to earn operating expenses, having an aggregate loss of $272,616.72. The other forty-eight railways reported a net revenue from operation of $17,122,658.81 and after paying interest, rental and other income charges, twenty-one railways showed a loss and the other thirty-eight reported a net income of $11,407,530.32. Only six railways paid dividends although the depreciation and other reserves and special charges made from income amounted to $7,525,663 as against $6,189,648 in 1927.

Employees and Wages.—The report contains tabular summaries of the number of employees, and salaries and wages. In 1928, there were 18,697 employees on all electric railways. Of this total, the number of those (exclusive of superintendents) who were classed as engaged in the transportation departments was 11,548; while 5,646 employees (excluding superintendents) were listed as being under maintenance. The total number of superintendents in both transportation and maintenance was 219. Office clerks numbered 1,106 and general officers 178. In 1927, the total number of employees was 18,090. The total amount paid in salaries and wages in 1928 was $26,494,063 as compared with $25,891,020 in 1927.

The number of buses operated by electric railway companies has been increasing quite rapidly; the increase during 1928 was 65, the total in service being 399 as against 334 in 1927. In 1923 there were only 37 buses in operation by electric railway companies.

Accidents.—The number of persons killed in accidents increased from 78 in 1927, to 99, and the number of persons injured increased from 4,858 in 1927 to 4,988 in 1928. Passengers injured amounted to 2,735 which was approximately one in every 300,000 passengers carried. Many of these injuries are scratches, bruises and cuts from glass and are not serious. Only one passenger was killed out of 808 million passengers carried. The number of employees killed increased from 7 in 1927 to 12, but the number injured decreased from 1,508 in 1927 to 1,114 in 1928. The large majority of deaths and injuries from electric railway accidents is due to collisions with automobiles and the statistics do not indicate which vehicle is responsible for the accident.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Conditions of Union Agreement not legally enforceable

IN the case *Young versus the Canadian Northern Railway Company,* in which judgment was rendered by Mr. Justice Dysart in the Court of King's Bench at Winnipeg last year (Labour Gazette, July, 1929, page 832-838), the plaintiff subsequently appealed, and the Manitoba Court of Appeal dismissed the appeal, with costs. The plaintiff, a machinist who had been employed by the company and whose employment was indefinitely suspended, sought by this action to obtain reinstatement in the company's service, or, in the alternative, damages for wrongful dismissal. He contended that the provisions of a certain wage agreement entered into between the company and Division No. 4, Railway Employees' Department, American Federation of Labour, including the seniority rules contained in that agreement, were impliedly incorporated in his contract of service with the company, and were enforceable at law, notwithstanding the fact that he was not himself a member of the union which entered into the agreement, but of another organization, namely, the One Big Union.

Mr. Justice Fullerton, in the course of his judgment in the Court of Appeal, said:—

"The plaintiff says that at the time he entered the employ of the defendant there was in existence a certain agreement known as Wage Agreement No. 4, containing provisions and rules as to working conditions, hours of labour, wages to be paid, length of employment and method of dismissal, all of which were applicable to every employee of the defendant, including the present plaintiff. The provisions, the plaintiff contends, were by implication incorporated in and became a part of his contract with the defendant. The plaintiff's whole case therefore depends on whether he can establish that the provisions and rules above referred to form part of a legal and enforceable contract between himself and the defendant. The learned trial judge has found as a fact, and the evidence supports his finding, that the plaintiff knew nothing of the agreement in question until after he had entered the defendant's employ ((1929) 2 W.W.R. 385, 38 Man. R. 283). There is no evidence that the plaintiff ever assented to or agreed to be bound by the terms of the said agreement after he learned of its existence, and moreover he was not a member of Division No. 4 on whose behalf the agreement had been made. Under these circumstances one has difficulty in discovering how a contract by implication can be said to arise.

"The so-called Wage Agreement No. 4 purports to have been entered into between the Canadian Railway War Board and Division No. 4 Railway Employees' Department, American Federation of Labour, and was to be effective from December 1, 1919. Supplementary agreements were subsequently made and the whole embodied in an agreement known as Wage Agreement No. 6, effective December 1, 1922. . . .

"While the plaintiff was not a member of the union on behalf of which Wage Agreement No. 4 was negotiated he contends that the rules contained in that agreement were the only rules governing the rates of pay, work hours and conditions of service of machinists in the employ of the defendant, that he worked under these rules and that not only he but the officials of the defendant regarded these rules as applicable to him. Counsel for the plaintiff in the argument before us admitted that Agreement No. 4 was not a legally binding agreement as Division No. 4 was not a legal entity and consequently incapable of making a binding agreement. He also admitted that the alleged agreement when executed did not bind any individual member of Division No. 4. He consequently argued that any employee of the defendant has the same right to invoke the benefit of these rules as a member of Division No. 4.

"As I understand the plaintiff's contention it is this: I worked under these rules, the defendant always looked upon these rules as applicable to me, consequently they were incorporated in and became a part of my contract. . . .

"In the present case the rules were neither posted up on the defendant's premises nor distributed among the defendant's employees. Copies of the rules were printed by the defendant and distributed among his own officials and it is in evidence that any workman could obtain a copy of the rules on application to the defendant.

"There is nothing in the evidence to show that the plaintiff agreed to work under the conditions fixed by the rules. When his contract of employment was made he did not know of their existence. At what time then can it be said that the rules became a part of his contract? Wage agreements were made from time to time between Division No. 4 and the defendant. Which particular agreement

covered plaintiff's contract? Can it be said that every time a new wage agreement was made its rules automatically attached to his contract? All these considerations show how impossible it is, in the absence of evidence of some active assent on plaintiff's part, to spell out for him a contract incorporating any of these rules. . . .

"What consideration can possibly be suggested in the present case for the promises of the defendant contained in the rules? The usual consideration for such a contract, namely, a promise, is entirely absent in the present case.

"If the plaintiff were a member of Division No. 4, I think under the evidence in the present case he would fail. In dealing with a similar agreement in Bancroft v. C. P. R., 30 Man. R. 401, at 408. (1920) 2 W.W.R. 865, at 871, I expressed the following view:—

It would be hopeless to urge that an agreement between the union and the defendant would enable every individual workman to attach the conditions of such an agreement to his own contract of service.

The object of the agreement is, of course, to secure uniform working conditions among the men and to provide means for the adjustment of disputes between them and the company and thereby prevent strikes.

"Nothing that I have heard in this argument has made me change the opinion there expressed. I am satisfied that so-called wage agreements entered into between workmen's unions and employers are never intended by the parties to be legally enforceable agreements. If employers do not live up to the terms of their agreements the workmen may apply for a board of Investigation under the Industrial Disputes Investigation Act, R.S.C., 1927, ch. 112, and failing a satisfactory adjustment may go on strike but in my opinion they cannot enforce the terms of such agreements through the Courts.

"For the above reasons I would dismiss the appeal with costs".

Mr. Justice Trueman did not concur in the view that the agreement did not apply to the plaintiff by implication, or in the view that there was no mutuality of consideration in the agreement. He held, however, following the precedent established by the Privy Council in the case of Caven versus Canadian Pacific Railway (LABOUR GAZETTE, September, 1925, page 945; December, 1924, page 1108; September, 1924, page 813), that even if the plaintiff had a remedy at law, the law could not be invoked until the steps provided for by the rules contained in the agreement had been exhausted.

Mr. Justice Robson held that, assuming the plaintiff to be in as good a position as if he had been a member of the union, and assuming that there was a legally enforceable contract between the plaintiff and defendant, the plaintiff was bound as against the defendant by the administration of the agreement carried out in the manner provided thereby, and in the absence of fraud, the Courts cannot inquire into that administration. Moreover, grievances discountenanced by the agencies of intervention established by such an agreement do not thereby become legal rights.

Young versus Canadian Northern Railway Company—Manitoba, 1930, 1, *Western Weekly Reports*, page 446.

Representative may maintain action for damages begun by deceased

A young woman sustained serious injuries when struck by a motor vehicle while she, with several other people, was waiting for a street car. Two actions for damages arose from the accident, which subsequently proved fatal. The first was brought in the name of the victim herself, and on her death it was revived by her mother. The second action was brought by the mother under the Fatal Accidents Act (Revised Statutes of Ontario, 1927, chapter 183). For the defendant it was contended that the first action came to an end on the death of the young woman and could not be revived. On this point Mr. Justice Garrow, in the Ontario Supreme Court, commented as follows:—

"To hold that where, as here, a person has been seriously injured, put to great expense, suffered much pain and discomfort, and, having brought an action to recover damages for these wrongs, dies as a result of the injuries before the action can be brought to trial—to hold that such an action cannot be revived in the name of the administrator of the deceased, and that the injuries sustained and the pain suffered and the medical expense incurred are to be lost to the estate of the deceased, is, to my mind, to ignore entirely the very broad language of section 37 (1) of the Trustee Act already referred to, which provides that,—

"Except in cases of libel and slander, the executor or administrator of any deceased person may maintain an action for all torts or injuries to the person or to the property of the deceased in the same manner and with the same rights and remedies as the deceased would, if living, have been entitled to; and the damages when recovered shall form part of the personal estate of the deceased".

"It has been held that this statute was passed to prevent the wrongdoer escaping liability by reason of the death of the person injured, and not for the purpose of creating a new right of action. That being so, and the language of the section being as broad as it is, it appears to me that the personal representative of the

deceased injured person is fully entitled to revive the action already brought and to recover all the damages down to the date of death which the deceased herself could have recovered had her action been brought to trial at that date. I can see no reason for excluding from the assessment of damages an allowance for the physical injury done to the plantiff and the pain and suffering which she was obliged to undergo for several months".

Judgment was given for the plantiff, with damages based on the losses incurred by the deceased and also by the survivor (her mother).

Bowler versus Blake, Ontario, 1930, (1) *Dominion Law Reports,* page 683.

Recovery of Wages by Seamen

Two seamen brought an action in the Exchequer Court in the British Columbia Admiralty District, to recover wages of an amount less than $200, alleged to be due by the vessel on which they were employed. The court sustained the defendant's objection to the jurisdiction of the Court respecting the recovery of wages under $200, Section 349 of the Canada Shipping Act providing that "no suit or proceedings for the recovery of wages under the sum of two hundred dollars shall be instituted by or on behalf of any seaman or apprentice belonging to any ship subject to this Part, in the Exchequer Court on its Admiralty side or in any superior court, unless (*a*) the owner of the ship is insolvent within the meaning of any Act respecting insolvency for the time being in force in Canada; or (*b*) the ship is under arrest, or is sold by the authority of any such court as aforesaid; or (*c*) any judge, magistrate or justices, acting under the authority of this Part, refers the case to be adjudged by such court; or (*d*) neither the owner nor the master is or resides within twenty miles of the place where the seamen or apprentice is discharged or put ashore. R.S., chapter 113, section 348."

The Court allowed that there was unquestionably a substantial balance due to each claimant and pointed out that they could still invoke the assistance of summary proceedings before the special tribunals designated in Section 344 of the Act, which reads:—

"1. Any seaman or apprentice belonging to any ship subject to this Part, or any person duly authorized on his behalf, may, whenever wages due to him to an omount not exceeding two hundred dollars over and above the costs of any proceeding for the recovery thereof becomes payable, sue for the same in a summary manner before any judge of the Superior Court for the province of Quebec, judge of the sessions of the peace, judge of a county court, stipendiary magistrate, police magistrate, or any two justices of the peace acting in or near the place at which the service has terminated, or at which the seaman or apprentice has been discharged, or at which any master or owner or other person upon whom the claim is made is or resides.

"2. Such judge, magistrate or justices may, upon complaint on oath made to him or them by such seaman or apprentice, or on his behalf, summon such master or owner, or other person to appear before him or them to answer such complaint."

Coffin and O'Flynn versus the "Protoco", British Columbia, 1930 (1) *Western Weekly Reports,* page 558.

Accident Insurance Payable Though Premium Payments are incomplete

A manufacturer in the Province of Quebec took out with an insurance company a policy of insurance against accidents to workmen which might occur in his factory from January 26, 1924, to January 26, 1925. In August, 1924, a workman was injured in the factory, and later filed an application to sue his employer to recover an indemnity under the Workmen's Compensation Act. At the same time that this application was filed the manufacturer made a voluntary assignment. The workman then sued the trustee in bankruptcy for the late employer. The Quebec Court of King's Bench allowed the workman's claim against the estate, and, on appeal by the insurer the Supreme Court of Canada affirmed the judgment of the lower Court. The Supreme Court found that where an employer insures himself for one year, under the provisions of the Quebec Workmen's Compensation Act, paying a fixed premium when the policy is issued and agreeing to pay, if necessary, a further premium at the end of the year, based on the wages paid by him during the year; and where the employer becomes bankrupt before the end of the year and does not pay the further premium, his trustee in bankruptcy can nevertheless sue the insurance company and recover the amount of a judgment recovered against the trustee by an injured workman for an accident occurring during the year. When the accident to the workman occurred, the obligation of the company to pay the assured arose, and nothing which might take place later could deprive the assured of this vested right.

Mr. Justice Mignault dissented from the opinion of the other judges.

Employer's Liability Assurance Company versus Lafaivre (Quebec) Supreme Court of Canada, 1930 (1) *Dominion Law Reports,* page 689.

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] APRIL, 1930 [NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

LARGELY owing to seasonal curtailment in the out-door industries, employment in Canada at the beginning of March showed a decline from the previous month, according to returns received by the Dominion Bureau of Statistics from 7,127 employers of labour, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 960,394 persons, as compared with 973,460 at the beginning of February. This reduction caused the index number (based on the 1926 average as 100) to decline from 111·6 on February 1, to 110·2 at the beginning of March, as compared with 111·4, 102·6, 97·5, 92·6, 88·1, 91·8, 91·0, 82·9 and 89·1 on March 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of March, 1930, the unemployment percentage reported to the Department of Labour by local trade unions stood at 11·5 in contrast with percentages of 10·8 at the beginning of February and with 6·8 at the beginning of March, 1929. The March percentage was based on the reports received by the Department from 1,760 local unions with an aggregate membership of 209,327 persons.

Reports received from the offices of the Employment Service of Canada indicated a decline during February in the average daily placements in employment as compared with the previous month, but an increase in comparison with February last year. Losses in all groups except farming were responsible for the decline from last month, while increased placements in building construction and maintenance mainly contributed to the gains over February a year ago.

The average cost of a weekly family budget of twenty-nine staple foods was $11.67 at the beginning of March, as compared with $11.83 for February; $11.23 for March, 1929; $10.92 for March, 1928; $11.05 for March, 1927; $11.46 for March, 1926; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $15.98 for March, 1920; and $7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again substantially lower at 91·9 for March, as compared with 94·0 for February; 96·1 for March, 1929; 97·7 for March 1928; 97·3 for March, 1927; and 101·3 for March, 1926.

The loss in working time caused by industrial disputes in Canada in March was less than half the corresponding loss in the preceding month, but it was greater than in March, 1929. Three disputes existed at some time during March, 1930, involving 1,582 workers, and resulting in the loss of 5,484 working days. Corresponding figures for February, 1930 were: five disputes, 2,952 workers, and 13,840 working days; and for March, 1929, fourteen disputes, 1,508 workers, and 3,723 working days.

Industrial Disputes Investigation Act.

During March the Department received an application for the appointment of a Board of Conciliation and Investigation in connection with a dispute between the Canadian National Steamships and its checkers employed at the waterfront at Halifax. The Board established in connection with the dispute between the railway companies and their checkers on the Montreal wharf was completed during the month. Further particulars of proceedings under the Act are given in the monthly report on proceedings under the Act on page 374.

Fair wages on Dominion Government work

The Minister of Labour introduced in the House of Commons on April 1 a bill respecting fair wages and hours of labour employed by contract or otherwise on public works of the Dominion of Canada. Mr. Heenan explained that the proposed measure would provide for the establishment of current rates of wages, with the new proviso that in all cases the rates to be paid must be fair and reasonable. It provides also that the eight-hour day shall apply to all government

work, whether carried out by contractors or by the government itself. Since 1900 the "Fair Wages" policy of the Dominion Government has been enforced by Order in Council, but the measure now before Parliament proposes to give statutory effect to this policy. The text of the bill appears on page 383.

8-hour-day for Dominion Government employees

On another page of this issue will be found the text of an Order in Council, dated March 27, providing that, except in cases where the work of employees is intermittent in character or the application of the rule is not deemed to be practicable or in the public interest, the hours of work of any employees of the Dominion Government who are at present required to work more than eight hours daily, shall be reduced to eight hours daily with a half holiday on Saturday.

Handbook on industrial diseases and compensation

Under the title "Trauma, Disease, Compensation: a Handbook of their Medico-Legal Relations", Dr. A. J. Fraser, chief medical officer of the Manitoba Workmen's Compensation Board, has published an important text-book for the use of medical practitioners and lawyers engaged in industrial accident compensation work (Toronto: The Macmillan Company of Canada, Limited). Referring to the need for such a work Dr. Fraser says:

"The volume of industrial casualties in Canada and the United States yearly reaches enormous figures, greater even that the casualties of war. The medical problems growing out of this large number of injured workers meet the physician and surgeon from day to day and Industrial and Compensation Boards press for solution. Unlike the special medical service and pension boards provided in the modern army organization, composed of selected medical and surgical officers, drafted each to his own special class of work, the medical and surgical work among the casualties of industry is to a large extent done by the rank and file of the profession at large, many of whom, it may be said, have not yet had the necessary experience or opportunities of training to appreciate fully the special medico-legal points that arise in relation to industrial claims."

Dr. Fraser's book is published with the design of meeting this lack of experience on the part of working practitioners. In it he assembles the opinions of representative teachers and writers in the medical field on the "very difficult subject of the influence of trauma in giving rise to subsequent conditions of disease". In a brief preface, Mr. Charles K. Newcombe, chairman of the Manitoba Board, describes the book as "a mine of helpful information carefully arranged and well digested. . . . During his twelve year's service as Chief Medical Officer of the Workmen's Compensation Board of Manitoba," Mr. Newcombe continues, "Dr. Fraser has observed and advised upon many thousands of cases. He speaks from full and ripe experience,"

The book is arranged in such a way as to be easy of reference. On the general question of the inclusion of occupational diseases under Workmen's Compensation legislation the author remarks as follows:—"A liberal interpretation of the term accident is the evident intention of compensation statutes, an intent which is probably very generously carried out in the administration and interpretation of such statutes. As a result of numerous judicial decisions hinging on the definition of an accident arising out of and in the course of employment, the limits of the industrial liability of the employer have been extended far beyond the area of that which was originally contemplated by the creators of compensation insurance."

Saskatchewan Compensation Act effective July 2, 1930

Mr. N. R. Craig, K.C., chairman of the Saskatchewan Workmen's Compensation Board, announced in a recent address at Regina that the Act would probably be in effect for the payment of compensation after July 1, 1930. Mr. Craig stated that forms were now being prepared which would be distributed to employers in all parts of Saskatchewan by the first of May, asking what wages they had paid their employees from July 1, 1929, to December 31, 1929, and also what wages they expected to pay in the corresponding period of 1930. This information was required by the board in order to make a proper rate of assessment. The board, he said, was trying to be as reasonable as possible in fixing the assessment rate, and it was believed that the rates could be fixed in such a way that there would be sufficient funds for compensation by the end of the year, without requiring that more money be borrowed.

The provisions of the Act were outlined in the LABOUR GAZETTE, April, 1929, page 379, in a review of the legislation enacted at the 1929 session of the Provincial Legislature.

Old age pensions and minimum wage in New Brunswick

The social Legislation introduced by the New Brunswick government at its session this year included the following measures:—an Act to provide for Old Age Pensions; an Act to provide for Mothers' Allowances; an Act to provide Minimum Wage for Women in certain occupations; and a Children's Protective Act. As noted in the Labour Gazette, December, 1929, page 1320, a commission was appointed last year to investigate the question whether the province should enact legislation to provide old age pensions in accordance with the provisions of the Old Age Pensions Act of the Dominion. After this Commission had commenced its work representatives of organized labour pointed out that in their opinion the question of Mothers' Allowances was of equal, if not greater importance than that of old age pensions. The Commission was therefore requested to report upon both these subjects. The interim report of this Commission is outlined on another page of this issue.

An account of the legislation enacted by the legislature at its late session will probably appear in the next issue.

Investigation of pensions and mothers' allowances in Saskatchewan

Addressing the Saskatchewan Association of Rural Municipalities at Regina last month, the Hon. Dr. F. D. Munroe, Minister of Health in the provincial government, stated that his department had appointed additional inspectors to make a special survey of the working of old age pensions and mothers' allowances in the province in order to ascertain what was being done with the money distributed under these schemes, and whether the grants were adequate to the needs of the recipients. Dr. Munroe outlined the other public health services supplied by the province as follows:—free tuberculosis treatment; free venereal disease dispensaries; supply of full-time medical doctors in seventeen municipalities and of part-time doctors in nine municipalities; municipal hospital districts; maternity grants (amounting this year to about $1,600 per month), and finally medical care under Workmen's Compensation.

Mothers' allowances in Alberta

The Alberta Legislature on March 4 adopted a resolution declaring that "this Assembly is of the opinion that the Government should as soon as possible confer with the Urban and Rural Municipalities Associations with a view to proclaiming the 1926 amendment to the Mothers' Allowance Act, which provided for the payment of assistance to mothers whose husbands are incapacitated by illness." Mr. Fred J. White, who proposed the resolution, pointed out that the amendment would provide for a family in which the father is now obliged to continue at work though suffering from a disease such as tuberculosis. The Premier, the Hon. J. E. Brownlee, stated that in 1926, when the amendment was enacted, the Minister of Agriculture and Health made a survey of the province, and found that the expenditure involved would be too heavy for the province to undertake at that time. The premier stated that he had visited Regina recently in order to discuss the whole subject of mothers' allowances with the government of Saskatchewan, and found that the social conditions in that province differed widely from those of Alberta. Under the Saskatchewan act the municipal districts were not obliged to contribute. The maximum payment under the act was $30 a month, but if further assistance was necessary it had to be provided by the municipal district.

Mr. Brownlee estimated that the additional cost of administration resulting from the amendment would be between $70,000 and $100,000 a year. He stated that many of the municipal districts found that they were unable to pay their 50 per cent of the cost in a prompt manner, and as a result the debt had to be carried on the books for a long time. The premier stated that he would be willing to consider a "pooling" arrangement by which the cities in the province would not be obliged to pay more than their fair share of the municipal contributions for mothers' allowances.

Men's minimum wage proposed in Quebec

A Bill to provide for fixing a minimum wage for men was introduced at the present session of the Quebec legislature by Mr. Aimé Guertin, member for Hull. The minimum rate fixed under the provisions of the Bill was 35 cents an hour for male employees of 16 years of age or over. Employees in agriculture, in domestic services, in navigation by sail, and in commercial establishments and offices, were to be excluded from its provisions; but it contained a section expressly including employees of the provincial government, as well as those of municipal and school corporations. An employee receiving wages less than 35 cents an hour, under the provisions of the bill, would be enabled to recover the difference by suit before any court of competent jurisdiction either during his en-

gagement or within a year from the date of discharge. An employer paying less than the minimum rate would be liable to a fine not exceeding $50 on complaint of the employee himself or of any other person.

On the second reading of the Bill on March 26, the Speaker ruled it out of order, on the ground that, as to give effect to the section referring to employees of the Provincial Government would involve increased expenditure by the government in carrying out public works, the bill could not, under the rules of the House, be introduced by a private member.

The Montreal Trades and Labour Council, at a meeting on March 8, discussing the principle of the bill, declared itself opposed to the establishment of a fixed minimum rate, fixed without reference to local conditions and existing rates. The Council stated its reasons for opposing the bill as follows:—"Because of the varied character of employment, the adoption of a fixed minimum rate applicable to all industry in all parts of the province, which appears to be the intention of the proposed bill, is not calculated to be in the best interest of those whom the bill seeks to protect. Furthermore, the proposed rate is entirely inadequate and far below rates already established by mutual agreement in certain industries and municipalities throughout the province. The recognition of such basic rate could not but react to the detriment of those already in receipt of a higher rate. Labour has been insistent in the demand that the federal 'Fair Wage Clause' should apply on all government work, and to establish an all-inclusive minimum wage might ultimately react on the successful application of such Fair Rates."

Alberta's position on unemployment insurance

The Alberta Legislature unanimously adopted the following resolution on March 10:—

"This Assembly is of the opinion that the Government of Canada should, with the least possible delay call a conference representative of the Federal Government and of the Provincial Governments for the purpose of investigating and considering this problem, and to particularly consider whether any nation-wide plan of unemployment insurance is, having regard to all the circumstances, feasible and practicable:

"Provided, however, that in any action, legislative or otherwise, taken by the Government of Canada following such conference, the Province of Alberta shall not be deemed to concur therein, or to be bound thereby until this Legislature gives its approval thereto."

Industrial survey of Ontario

In view of the next annual meeting of the Canadian Manufacturers' Association, which is to be held at Toronto next June, a series of articles on industries in the Province of Ontario is being published in *Industrial Canada*, the monthly magazine of the Association. The first instalment of the survey, appearing in the March issue, summarizes the present industrial standing of the Province as follows:—

"Practically everything that is manufactured in the other provinces is also manufactured in Ontario, while in some industrial products Ontario has a monopoly. The latest published official statistics, covering the year 1927, show 9,512 industrial establishments with an invested capital of $2,134,181,377. These plants spent $939,872,565 for their materials and produced goods valued at $1,758,004,575. Their employees numbered 298,361 and they received, in salaries and wages, $355,373,039.

"Not only are Ontario's industries diversified as to production, but they are also well distributed as to location. In large centres of population, such as Toronto, Hamilton, London and the Border cities, towns and even villages, prosperous factories are the backbone of the community. This decentralization is possible mainly because of excellent transportation facilities by rail, road and water and because of the development and general distribution of hydro-electric power.

"Hydro-electric power has been responsible for the great industrial growth of the southern part of the province since the beginning of the century, and it is playing an important part in the more recent development of Northern Ontario. To some extent it has replaced coal, the one essential natural resource lacking in this industrial province.

"Ranked according to the 1927 value of production, the five leading industries of Ontario are: the automobile industry, with products valued at $128,700,514; flour milling, $107,646,593; slaughtering and meat packing, $89,309,580; pulp and paper, $74,309,603; and rubber goods, including rubber footwear, $72,896,820. The largest capital investment is in the production of electric light and power, amounting to $393,043,877. The capitalization of the pulp and paper industry, $201,763,069, stands second."

New British Unemployment Insurance Act

The Unemployment Insurance Act, 1930, which received the Royal Assent on February 6, came into operation in March. The new Act provides for increases in the rates of unemployment benefit for persons aged 17, 18

and 19, and for an increase in the rate of benefit for an adult dependent from 7 shillings to 9 shillings a week. In addition, the Act makes certain changes in the conditions for the receipt of benefit, and adds to the classes of dependents in respect of whom an increase of benefit may be received.

One of the main changes in the conditions for the receipt of benefit is the repeal of the provision that a claimant must prove that he "is genuinely seeking work, but unable to obtain suitable employment." The new Act provides, however, that claimants will be disqualified for benefit if it is proved that, without good cause, they have refused a suitable situation, or have failed to carry out any written directions given with a view to assisting them to find suitable employment. The new Act also provides that, in general, claims for benefits which are not allowed by insurance officers must be referred to a Court of Referees for decision. The procedure which has been laid down in this connection provides for the greater localization of the work of the Court in deciding on doubtful claims.

Benefits to workers under British health insurance

An outline of the report of the committee of the Legislature of British Columbia, recommending the institution of a system of sickness insurance, is given on another page of this issue. Reference is made also to the annual report of the health insurance system in England. The results obtained by the British Health Insurance scheme are pointed out by Mr. R. J. Davies, M.P., in his recent annual report as secretary of the National Union of Distributive and Allied Workers (Great Britain). Stating that the scheme is one of the public schemes that are based on sound actuarial principles, Mr. Davies proceeds to show the wide range of benefits purchased by the small contributions required:—"It is amazing, for example, in the case of health insurance, the progress which has been possible within the meagre limits of the present contribution income. One instance will suffice—for a deduction of 4d. per week from wages in 1912, a man became entitled to 10s. per week sickness benefit, 5s. disablement, 30s. maternity, and to medical and sanatorium benefit. The deduction from wages in 1930 is only a halfpenny more (4½d.) and the majority of men are now entitled to maximum cash benefits, i.e., 20s. sickness; 10s. disablement; 50s. maternity; medical benefit. Dental, ophthalmic, surgical, want, or distress, and other types of additional benefits, are also available for the large majority of insured persons. Approved societies now bear also the full cost of medical benefit, but the State contribution has been considerably reduced during the last few years. Whatever may be said of the approved society system, if and when the whole field of social insurance is being surveyed, we feel sure the administration of the health scheme, within the limits stated, will at any rate stand out as an example of what might have been possible if other similar schemes had been as soundly based and administered."

Problems of a census of unemployment

At the 91st annual meeting of the American Statistical Association Mr. Charles E. Persons discussed the problems raised by the inclusion of unemployment among the subjects to be investigated in the forthcoming census of the United States (Labour Gazette, September, 1929, page 962, etc.). An attempt to ascertain the extent of unemployment in Canada by the same means is to be made in Canada in accordance with a resolution adopted by the House of Commons last year declaring that "in the forthcoming census provision should be made for the securing of the fullest possible data regarding the extent of unemployment and sickness" (Labour Gazette, August, 1929, page 846).

Mr. Persons lays stress on the point that the questions to be asked by the census enumerators must be free from ambiguity and capable of definite answer "even though the information is received from the housewife rather than from the individual worker . . . . The boarding house keeper will answer for her boarders, neighbours and friends for workers absent when the enumerator calls." For such reasons he questions the utility of asking vague questions such as the number of months of unemployment during the census year. "The census is taken on a certain date," he points out; "the unemployment census should confine itself to enumerating the unemployment on that date . . . All past time performances in unemployment census taking," Mr. Persons continues, "indicate that very sparing use should be made of long range questions. Without too sanguine hope that the answers will be accurate the unemployment schedule may venture to inquire how many weeks men have been without jobs. It may add a parallel question for those possessed of jobs discriminate between 'a job,' and makeshift or provisional employment. A few hours' work at shovelling snow does not terminate a period of unemployment. On the other hand, many one-time miners, glass blowers, and cigar makers will never again be permanently em-

ployed in those industries. The makeshift jobs accepted as a temporary expedient may prove to be permanent. These men may have jobs, although they may not be inclined to accept that now as a true statement. The second inquiry is intended to sort out from those claiming jobs the fraction whose layoff has been so long as fairly to warrant their being counted among the unemployed. And its use is suggested by knowledge of the practice, in such industries as the railroads, of carrying on the payroll all men laid off when employment shrinks.

"The conclusion is that the census of unemployment should gather information regarding all gainful workers found idle on the census day. It should place emphasis on the possession of a job. The mandate of Congress is that those unemployed should be enumerated."

French social insurance scheme effective July 1

The Social Insurance Act adopted by the French Parliament in March, 1928, is to take effect on July 1, 1930. This Act, the provisions of which were outlined in the LABOUR GAZETTE, June, 1928, page 590, established a system of compulsory insurance against sickness, maternity, invalidity, old age, death and family responsibilities. It was estimated that the new system would affect 8,500,000 insured persons and 13,000,000 beneficiaries, and would entail an annual expenditure of about five billion francs. Compulsory insurance will apply to all wage earners of either sex, whose total remuneration does not exceed 50,000 francs. This limit is increased to 18,000 francs for wage earners having one dependent child in each case, and it is further increased by 2,000 francs in respect to each child after the first. The Act was to have taken effect six months after the date of the issuance of the regulations under its provisions, which would have been February 5, 1930. But shortly before the latter date the government decided to postpone the operation of the Act until certain proposed amendments had been fully considered, and it is now announced that it will become effective on the date mentioned above, namely July 1, 1930.

Proposals for stabilizing employment at Detroit

Towards the end of 1929 the mayor of Detroit appointed a civic committee to study unemployment, with particular reference to the seasonal fluctuation in automobile manufacturing. The committee reported on January 7, 1930, having found that unemployment was severe in Detroit in the latter part of 1929, though the year had been one of unusual activity; and that it persisted in spite of relief measures undertaken by public utilities, the construction industry, and the municipality. They conclude that the palliative methods now in use for unemployment relief are obsolete: "merely to speed up governmental construction," they assert, "and to request our railroads and our public utilities to expedite their programs to alleviate the present situation, is only a temporary expedient, and does not in any way approach the final solution of the periodic unemployment situation in so far as Detroit as a municipality is concerned, or the nation as a whole."

The remedy for unemployment, the committee considers, must be looked for within industry itself and consists in methods of management tending to stabilize manufacture: "Future stabilization in output would be advantageous to the public, to the workmen, and to Detroit and the nation, and a program benefiting all parties should certainly be put into effect, in spite of the many recognized objections, as rapidly as the industry can educate the public to the necessity."

The committee recommends the following practical measures as a means of affording steady employment, even although such a policy might necessitate shorter hours and possibly lesser income:

1. A reduction in price of cars in winter, and an increase in summer. This is to stimulate buying in winter.

2. Scientific control of field stocks of unsold cars so that output will be greater than retail sales in the winter, and less in the summer.

3. The public should be induced to look on a car as a means of transportation and not as a bonnet or a dress where style changes every time the moon changes. . . . that we should get over the craze for model changes (fundamental changes in car design are not numerous), and that the blame for this is that the public demands constant change and will get it, and pay dearly for it.

4. The things the automotive industry and the public must do to stabilize employment in the industry....are as follows:—(*a*) Adopt a sliding scale of prices varying with the seasons; (*b*) Make less frequent model changes; (*c*) Change models in summer rather than winter; (*d*) Eliminate winter automobile shows; (*e*) Keep accurate records of stocks, sales and production; (*f*) Exercise sound judgment in forecasting sales; (*g*) Adopt production schedules which will cause field stocks to rise and fall in a predetermined scientific manner.

Vocational education in New Brunswick

The eleventh annual report of the New Brunswick Vocational Education Board recently published, gives an account of the activities of the Board during the year ending October 31, 1929. The report points out that last year 1,020 pupils were enrolled in the full-time classes, with fourteen enrolled in short-term and special classes, while 2,504 pupils were enrolled in the evening classes. It is noted that in the latter, general education and dressmaking were the most popular classes, the former with 504 and the latter with 511 students enrolled. The class of the last school year showed industrial high school courses established in seven of the composite high schools in the province. In these the student may take the regular academic high school course, and in addition may take either a commercial, home economics or industrial course. An illustration of the growing importance of pulp and paper making is found in the fact that in the Edmundston school last year twenty-four men attended a full-time day school in a pulp and paper making course.

Need for vocational guidance of juveniles

The Social Service Council of Canada, in a recent study of juveniles in penitentiaries secured the following information as to the school records and the subsequent employment records of a group of 1,258 boys who registered for employment at one industrial centre in Ontario. Of this group 70 per cent became factory workers; 20 per cent office workers, and 10 per cent went to various trades. The proportion of boys who had not passed their high school entrance examination was 60 per cent; the proportion who passed their entrance, but did not go to high school was 20 per cent; the proportion who received their junior matriculation was 3 per cent; those who received their senior matriculation were about ½ or 1 per cent. The proportion of boys in the group who had trouble in the way of continuous employment was about 20 per cent, 15 per cent being those who had no further than a lower school education and 4 per cent having received high school education of from one to four years. All matriculants with the exception of one case continued in the positions they have obtained. Only through slackness in firms with which they were connected were they let out, owing to the employer having to decrease their staffs.

The Massey Harris Employment Department recently took a census of the number of boys under 20 years of age, who had left employment, or had been discharged within the last 7 years. Practically all the boys were over 16, yet very few had advanced beyond junior fourth book in the public schools. Altogether 1,499 boys were involved, their average stay being only 9 weeks, and only 107 remaining longer than 6 months. Nearly a third (477) remained less than a week, and only about a ninth (163) stayed over 3 months. Nearly 400 (in actual numbers 396) were discharged because of unsatisfactory conduct, or inability to do the job. The employment manager stated that these boys practically all came from the "non-academic" type, who do not care for the ordinary public school type of education. Staying but a short period in any job, they never become trained and "develop into the floating type of labourer" who, as they get older, become "a drug on the labour market," and "compose the bulk of the city's unemployed."

The *Social and Industrial Review*, published by the Department of Labour of the Union of South Africa, gave in its issue of February 5 the results of a survey of juvenile placements in the Johannesburg district in 1929, reaching conclusions somewhat similar to those of the Social Service Council of Canada. An inquiry conducted under the auspices of the Juvenile Affairs Board, showed the following conditions in regard to juvenile employment:

Slightly over one-third of the cases investigated proved to be highly satisfactory. It was found that in many cases the lads had been promoted and would be eligible for further promotion. Most of these cases were attending classes with a view to increasing their chances of advancement. One-sixth of the satisfactory cases were found to be engaged in blind alley occupations, some of them being office boys, others pages in hotels; some were spending their spare time in motor works and were hoping to obtain other employment through their own efforts. Reference is made to the "lamentable fact" that so few of these boys kept in touch with the Juvenile Affairs Board. About half the number of cases dealt with had had three, four or five changes of employment since obtaining their first job. Half of these cases had made as many as five changes within the past year. It was estimated that about a fifth had left on account of family troubles, or their parents having moved a considerable distance from the boys' places of employment. These comprised the untraceable juveniles. The cause of so many changes was often found to be due to faults of character or an unfortunate lack of understanding between employers and employees

Some of the juveniles were of a restless nature and did not know what they wanted. They would give up job after job. "The fact that half the lads placed in employment were always shifting was a strong indication that after-care work was necessary."

Extension of vocational rehabilitation period in United States

References to the progress of "vocational rehabilitation" in the United States and Canada were made in the Labour Gazette, July, 1927, page 702, and in previous issues. In 1920 the United States Congress enacted the "Fess-Kenyon" law providing for a system of federal and state co-operation in re-establishing injured industrial workers. Under that Act the sum of one million dollars was to be distributed annually among the States for a period of four years. In 1923 the provisions of the Act were extended to June 30, 1930. The Committee on Education of the House of Representatives, reporting favourably on a recent bill to extend the Act for a further period of three years, states as follows:—

"To date 44 States of the Union have accepted the provisions of the national rehabilitation act and are co-operating with the Federal Government in restraining and returning to remunerative employment their disabled citizens. Some of the States are appropriating three or four times the amount allotted by the Federal Government. This counselling, training, and placing of disabled persons costs on the average only $250 per case. Figures from the various States show that it costs from $300 to $500 annually to maintain these persons in idleness at State expense in poorhouses and other institutions before they are rehabilitated. The average age of rehabilitated persons is 30 years, which gives them on the average a working expectancy of 20 years. During the first year after rehabilitation they earn on an average more than the cost of their rehabilitation and still have a period of 19 years in which to be earners.

"The rehabilitation program has been in operation for over nine years. During a large part of this period the work in the States first co-operating was in the experimental stage, as is now the case with those States which have inaugurated their program more recently. Therefore it is imperative that Federal aid be extended for such period of years as will give equal opportunity to all States in the development of standards of efficiency in practice and methods.

"This is a humanitarian service, in that it helps those who are not able to help themselves and places them in a position to live happy lives of usefulness. It is a social service in that it converts those who are not able to take their places in society into self-respecting citizens. It is an economic service in that it converts liabilities into assets."

Jurisdictional disputes in Building Trades

Following the conferences held during the past winter in the United States at the suggestion of President Hoover (Labour Gazette, December, 1929, page 1324) an agreement was reached in January between the unions and the organized employers in the building trades. President W. J. McSorley, of the Building Trades Department of the American Federation of Labour, recently explained that the agreement was for the purpose of avoiding strikes caused by disputes between unions as to which should perform certain classes of work. Such strikes, he declared, have in the past years cost great losses to the building industry. The general scheme now agreed upon provides, first, that there shall be no cessation of work pending the adjudication of an intra-union dispute, and second, the setting up of machinery for agreement through conciliation and, where necessary, arbitration of any matter in dispute. The system established under the new agreement may consist of a single board or of a series of regional boards made up of representatives of the unions and employers. If regional boards, favoured by some as providing quicker action, are set up, a national board or court of appeals will be formed to which any union may appeal, all men remaining at work meanwhile.

Before 1919, when the National Board for Jurisdictional Awards was set up (Labour Gazette, January, 1921, page 63) jurisdictional strikes, usually originating in the development of new methods or materials, were frequent. The board settled scores of disputes and headed off thousands of strikes prior to 1926, but in that year it collapsed because of structural weakness. Since then a common method of settling a dispute has been to call a strike, leaving the investor helpless to do anything while the unions involved fought it out.

Employers, workmen, engineers and architects were represented on the old board. In the new board there will be only employers and representatives of the unions, probably with an arrangement whereby a different umpire will sit in each arbitration case.

The province of Quebec Safety League recently issued, in its "Safety Leaflet" series, No. 25 on "Investigating Accidents," also No. 26, on "Safety Methods in Repair Work".

The Labour Educational Association of Ontario will hold its 28th annual convention in Niagara Falls, commencing May 24, the meeting to be held in Bampfield Hall, 644 Erie avenue. The convention call urges affiliated organizations to submit resolutions for consideration three days prior to the opening of the convention.

At the 1929 session of the Nova Scotia Legislature an amendment was made to the Workmen's Compensation Act increasing the basis of compensation from 55 to 60 per cent of the average earnings of the injured workman. The Nova Scotia *Industrial Safety News* points out that this change will mean an added cost to the employers of between 7 and 8 per cent. "The only way this increased burden can be offset," it is stated, "is by preventing accidents, and we hope all employers will take effective action towards this end. The burden is more or less a mutual one, and the only way an individual firm can get any relief is through the general reduction in the number and severity of accidents in the industries with which it is grouped for assessment purposes."

The Nova Scotia *Industrial Safety News*, April, 1930, states that the Maritime Safety League is to be re-organized. It is pointed out that last year there were 1,482 accidents in the Maritime Provinces of which 348 were fatal. "When we read of one fatal accident the impression made upon the mind may not be very deep, but when we find that 348 lives were destroyed by accident in these three small provinces in one year, we cannot help but be deeply impressed. This is equivalent to wiping out a village of 3,480 inhabitants every ten years."

Imperial Service Medals for Canadian Employees

Thirty-five employees of the Dominion Government have been awarded Imperial Service Medals by His Majesty the King, as follows:

Department of Justice

Tinsmith-instructor: Vincent Bisson, St. Vincent de Paul, Quebec.

Chief keeper: Felix Clermont, St. Vincent de Paul, Quebec.

Department of Marine and Fisheries

Lighthouse keeper: Edward Winchester Suthern, Westport, Nova Scotia.

Post Office Department

Letter Carriers: James Charters, Hamilton, Ontario; Dominick Killorn, Saint John, New Brunswick; Frederick Tubbs, Victoria, British Columbia.

Department of Railways and Canals

Agent: Peter Henry Sheeman, Dalhousie, New Brunswick.

Assistant foreman: Anselme Nolin, Joffre, Quebec.

Baggage master: Albert Judson Lutz, Moncton, New Brunswick.

Blacksmith: Malcolm Ross, Stellarton, Nova Scotia.

Carpenter: Bliss Botsford Wilson, Moncton, New Brunswick.

Chief despatcher: Jasper Davison, Campbellton, New Brunswick.

Drillman: John Michael Murray, Halifax, Nova Scotia.

Freight checkers: George Thomas Ingram, Charlottetown, P.E.I. Nathan Budd Leaman, Moncton, New Brunswick; James Albert Mullaney, Saint John, New Brunswick.

General foreman: David Albert Seaman, Moncton, New Brunswick.

Locomotive engineers: Louis Charles Auguste Dion, Rivière-du-Loup, Quebec; John Franck, Rivière-du-Loup, Quebec; Louis Filteau, Joffre, Quebec; John William McDavid, Campbellton, New Brunswick; Ernest Oullet, Rivière-du-Loup, Quebec; Hugh Daniel Stewart, Stellarton, Nova Scotia.

Locomotive fireman: Ludger Pelletier, Rivière-du-Loup, Quebec.

Locomotive wipers: Albert Payne, Campbellton, New Brunswick; Murray Whooten, Mulgrave, Nova Scotia.

Roadmaster: Thomas Henry McPherson, Moncton, New Brunswick.

Section foreman: John Daniel McGregor, Trenton, Nova Scotia.

Sectionman: Paul Dastous, St. Moise, Quebec.

Train baggagemaster: Charles Hill Porter, Moncton, New Brunswick.

Standard rule inspector: Toussaint Treffle Marchessault, Levis, Quebec.

Switchman: James Arbing, Saint John, New Brunswick.

Train master: Andrew Bunn, Sydney, Nova Scotia.

Trackman: Edmond James McDonald, Richmond, Prince Edward Island.

Water service man: Joshua Morrell, Moncton, New Brunswick.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of March was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Spring activity in the agricultural industry in the Province of Nova Scotia was just commencing. The fishing industry in this province reported good catches, although weather conditions were not particularly good for operations. Considering the time of the year activities in the logging and lumbering industries were rather favourable, and it was anticipated that river driving would begin shortly. Production in the coal mining industry showed normal activity in that line. Manufacturing industries continued on about the same basis, without any curtailments being reported. Although some construction activity was noticeable in Halifax, building was rather quiet in other sections of the province. Transportation was fair, while trade showed improvement. The usual number of orders for domestic workers were being received.

As in Nova Scotia, farmers in the Province of New Brunswick were starting their spring work. Fishing catches were rather fair, and lobster fishermen reported conditions as improving. Lumber operations were almost completed for the season, and there was a lull in this industry pending the beginning of river driving. Manufacturing was normally busy. Building and construction activity showed an upward tendency, and Moncton and Saint John showed rather substantial activity for this season of the year. Transportation and trade were both commented upon as being good. The usual demand for women domestic workers was being fairly well met.

Except in the case of the Montreal office the employment offices in the Province of Quebec reported that orders for farm hands had not yet started to come in. This was the slack season in the logging industry, following the conclusion of heavy cutting operations and pending river driving. Mines throughout the province showed normal activity, and it was expected that additional work, particularly prospecting, would be started in the near future. In Montreal the boot and shoe trades showed increased activity, as did also the clothing industry. Throughout the province textile manufacturing showed no alteration. Manufacturing industries generally appeared to be in a rather satisfactory state. Building and construction activity showed a tendency to increase, with the result that orders for tradesmen and labourers registered with the employment offices were becoming more numerous. Railroad transportation was active, but trade conditions were reported as quiet. The demand for and the supply of women domestic workers were about equal.

Although there was a good supply of experienced farm workers available at the Ontario employment offices, the number of vacancies being listed showed a substantial upward tendency. As might be expected at this season of the year, the logging industry in the northern part of this province was fairly quiet, cutting having fallen off substantially and river driving not yet having been started. Plenty of men were available for any vacancies in the mining industry that might develop, but while only a few placements were being made this industry showed continued normal activity. The changes in the condition of the manufacturing industry throughout the province were not particularly numerous, though such changes as were occurring indicated increased activity. Weather conditions had scarcely yet improved to the point where the building and construction activity would materially benefit, with the result that the volume of work in this line being proceeded with at the present time was not particularly large. The demand for women domestic workers was about the usual, and no serious shortages of applicants were reported.

Backward spring weather in the Province of Manitoba was holding up the demand for farm hands, which did not show the expected increase; plenty of experienced applicants were available to take such jobs as were offering. Building and construction, particularly in the City of Winnipeg, were optimistically commented upon, especially as regards the prospects for the forthcoming season. Though some men were still being placed in the logging industry a slackening off was reported. Reports indicated that factories were fairly busy. Demands for unskilled labour for casual jobs were not particularly numerous. Vacancies for women domestic workers were filled as they were registered.

Although the Saskatchewan employment offices generally reported an improved demand for farm workers, there was no shortage of competent applicants, and the really heavy demands for workers had not yet made themselves felt. Very few vacancies for building and construction workers had yet been notified to the various employment offices. Log-

ging and sawmilling activity was particularly brisk. Although a fair number of casual orders for labour were being received, there was no difficulty in meeting these demands. Requirements for women domestic workers were on the increase, but plenty of applicants were available.

Demands for farm help in the Province of Alberta also were on the increase, but there was no shortage of suitable applicants, and

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep, and hogs; storage holdings of butter and cheese.

peak demands such as received in other years were not anticipated. The building and construction season had not yet really begun, although a fair volume of work of this character was being proceeded with. There was a fair demand for mill hands and logging workers. The coal mines showed lessened activity. Vacancies and applicants for female domestic work were about equal.

The logging and lumbering industry throughout the Province of British Columbia was not uniform in that some districts reported improvement, while others reported no change. Metal mines continued to operate with normal activity. Building and construction prospects were rather favourable, and considerable work was being carried on. Some minor improvements in the manufacturing group were noted. The women's division of the Vancouver employment office showed increased activities. Generally speaking, the present conditions, considering the time of year and future prospects, were rather favourable in this province.

Employers' Reports

Largely owing to seasonal losses in the out-of-door industries, there was a decline in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 7,127 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 960,394 persons, as compared with 973,460 in the preceding month. This increase caused the index number, (based on the average for 1926 as 100), to decline from 111·6 on February 1 to 110·2 at the beginning of March, as compared with 111·4, 102·6, 97·5, 92·6, 88·1, 91·8, 91·0, 82·9 and 89·1 on March 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was downward in the Maritime Provinces, Quebec, Ontario and the Prairie Provinces, but in British Columbia improvement was indicated. In the Maritime Provinces, gains were registered in manufactures, particularly in iron and steel works, and transportation and trade were also busier. Logging, mining, communications and construction, however, reported seasonal losses. In Quebec, the decrease was due to seasonal curtailment in logging and construction. Manufacturing and transportation, on the other hand, were decidedly brisker. In Ontario, iron and steel, textiles and lumber recorded considerable recovery, and mining, communications and trade were also more active, while construction and logging were seasonally slack. In the Prairie Provinces, manufacturing showed increases, while mining, transportation and trade reported reduced activity. In British Columbia, manufacturing, particularly of lumber products, recorded important advances in employment, as did logging, transportation and construction, while mining was slacker.

Employment declined in Montreal, Quebec, Toronto, Hamilton and Winnipeg, but the trend was favourable in Ottawa, Windsor and the Adjacent Border Cities and Vancouver. In Montreal, there were reductions, chiefly in construction, while considerable improvement was shown in manufactures, especially in iron and steel and textile factories. In Quebec, manufacturing and construction afforded less employment, while other industries recorded only small general changes. In Toronto, iron and steel and pulp and paper factories reported a considerable decrease, and there was also a seasonal falling-off in construction. On the other hand, textile plants, services and trade afforded more employment than on February 1. In Ottawa, iron and steel plants were more active, and trade was also rather brisker. In Hamilton, manufacturing, especially of iron and steel products and electrical apparatus and building materials showed less employment. In the Border Cities, pronounced improvement was indicated, mainly in automobile factories. In Winnipeg, the decline was largely in trade, while manufactures were somewhat busier. In Vancouver, construction and transportation recorded small gains.

A review of the returns by industries shows improvement in manufactures, notably in iron and steel, lumber and textile factories. On the other hand, logging, construction, mining, transportation, communications and trade showed seasonal curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1930.

Trade Union Reports

There was a slight decline in the volume of employment afforded local trade union members at the close of February, the 1,760 labour organizations from which reports were tabulated, with 209,327 members, indicating 11·5 per cent of inactivity, compared with 10·8 per cent in January. The situation was also less favourable than in February last year, when 6·8 per cent of the members reported were without work. Nova Scotia and New Brunswick unions reflected an upward employment trend during February from the previous month, the tendency in the remaining provinces being toward lessened employment. The changes, however, were not outstanding. All provinces contributed a share to the unem-

ployment increase recorded over February of last year, Saskatchewan and Alberta unions showing the most noteworthy curtailment.

A more detailed article with tabular statements on unemployment among local trade unions appears elsewhere in this issue.

Employment Office Reports.

During the month of February, 1930, the offices of the Employment Service of Canada made 23,132 references of persons to vacancies and effected a total of 22,073 placements, of which 10,965 were in regular employment and 11,108 in casual work. Of the placements in regular employment, 7,839 were of men and 3,126 of women. Applications for work were received from 36,223 workers, of whom 25,715 were men and 10,508 were women, while employers notified the Service of opportunities for 15,947 men and 7,228 women, a total of 23,175 vacancies. A decline was shown in the volume of business transacted when a comparison was made with the figures of the preceding month, but a slight increase was indicated when the figures were compared with those of February last year. Reports for January, 1930, showed 27,365 vacancies offered, 43,790 applications made, and 25,929 placements effected, while in February, 1929, there were recorded 21,899 positions available, 31,932 applications for work, and 20,184 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1930, will be found elsewhere in this issue.

Building Permits and Contracts Awarded.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during February, 1930, was $8,827,870, as compared with $7,189,741 in the preceding month and with $10,465,330 in February a year ago.

The *MacLean Building Review* states that the contracts awarded for March totalled $24,263,000. This is a high total for March judging from the records of past years. March a year ago reached twenty-seven millions. Of the March, 1930, total, $11,561,000 was for business buildings; $5,135,700 was for engineering purposes; $1,442,300 was for industrial purposes. The apportionment of the contracts awarded during March by provinces was as follows: Ontario, $9,595,000; Quebec, $8,680,100; British Columbia, $2,128,500; Saskatchewan, $927,800; Nova Scotia, $848,400; Manitoba, $758,800; Alberta, $755,600; New Brunswick, $559,600; Prince Edward Island, $9,200.

Production and Trade

Industrial Production.

Figures showing the volume of production in certain industries during the recent months and also in the corresponding months in the previous year are given in the table on page 369.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that the physical volume of business in Canada was uneven during February, a moderate advance after seasonal adjustment being shown in manufacturing production. The operations of the motor car industry expanded considerably and the imports of crude petroleum denoted preparations for an active season in the oil industry. The receipts from other countries during the first two months of this year were more than 151,000,000 gallons, compared with 102,900,000 gallons in the same months of last year. The daily average output of steel ingots and castings showed a moderate increase over January, the production in February amounting to 106,612 long tons. The lumber industry was less active in February and the production of newsprint showed a recession. The exports of wood pulp at 66,512 tons were 18·5 per cent over the same month of 1929. The index of manufactures, after adjustment for seasonal tendencies, was 153·6 in February compared with 151·3 in the preceding. Mining operations showed a decline in February from the preceding month after adjustment for the difference in the length of the months.

A drop of 42 per cent in the output of coal from Alberta mines in February, as compared with the total for the preceding month, was the chief factor in reducing the Dominion output for the month to a point 26 per cent below the figures for January, according to a statement issued by the Dominion Bureau of Statistics at Ottawa. Decreased railway consumption of coal was given as the principal cause of the lessened output. Coal mining during February totalled 1,185,458 tons, a decrease of 11 per cent from the five-year February average of 1,333,328 tons. February's output included 861,233 tons of bituminous coal, 46,810 tons of sub-bituminous and 277,415 tons of lignite. Nova Scotia was the leading producing province, with an output of 473,723 tons or 40 per cent of the total production. Alberta mines produced 443,462 tons or 37 per cent of the total production, British Columbia's output amounted to 197,162 tons; Saskatchewan, 50,760 tons; and New Brunswick 20,451 tons.

Production of coke pig iron in Canada during February amounted to 70,600 long tons. This tonnage was 19 per cent under the output

of 87,079 tons in January and 25 per cent less than the total of 93,939 tons reported for February of last year. Compared with the figures for the previous month, data for February showed a gain in the output of basic iron, but this was more than offset by lower tonnages for the foundry and malleable grades. Basic iron advanced to 51,262 tons from 48,898 tons while foundry iron dropped to 18,522 tons from 30,073 tons and malleable iron to 816 tons from 8,108 tons in January.

Production of ferro-alloys in Canada during February at 4,821 tons was 31 per cent lower than the 6,943 tons reported for the previous month.

Production of steel ingots and direct steel castings in Canada during February at 106,612 tons was slightly under the 115,200 tons of the previous month and was also below the 117,445 tons made in February of a year ago. The reduction from January was due to the lower output of steel ingots, basic open hearth ingots having dropped to 97,211 tons from 105,043 tons, electric ingots to 1,873 tons from 2,144 tons and alloy ingots from basic furnaces, to 880 tons from 1,457 tons. Direct steel castings were slightly higher at 6,648 tons as against 6,556 tons in January.

External Trade.

A summary of Canadian trade prepared by the Department of National Revenue shows that in February, 1930, the merchandise entered for consumption amounted to $80,922,161, as compared with $84,910,377 in the preceding month and with $97,042,055 in February, 1930. The chief imports in February were: Iron and its products, $18,952,256; Fibres, textiles and textile products, $13,670,352; Non-metallic minerals and products $11,046,082.

The domestic merchandise exported during February, 1930, amounted to $66,689,817, as compared with $73,507,327 in January, 1930, and with $82,259,345 in February, 1929. The chief exports in February, 1930, were: Wood, wood products and paper, $19,075,205; Agricultural and vegetable products, mainly foods, $13,902,897; Non-ferrous metals and their products, $10,810,013.

Strikes and Lockouts

The time loss due to industrial disputes in March, 1930, was less than half that occurring during February, 1930, when a strike of women's clothing factory workers in Toronto, involving approximately 2,000 workers, caused about 12,000 days' time loss. As compared with March, 1929, the figures for March, 1930, show that about the same number of workers were involved in the three disputes occurring this year as in the fourteen which were recorded for the same month in 1929, the time loss being greater. There were in existence during the month three disputes, involving 1,582 workers and resulting in a time loss of 5,484 working days, as compared with five disputes involving 2,952 workers and resulting in a time loss of 13,840 working days in February. In March, 1929, there were on record fourteen disputes, involving 1,508 workers and resulting in a time loss of 3,723 working days. At the end of the month there were two disputes recorded as strikes and lockouts involving approximately eighty workers. These figures do not include those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $11.67 at the beginning of March, as compared with $11.83 for February; $11.23 for March, 1929; $10.92 for March, 1928; $11.05 for March, 1927; $11.46 for March, 1926; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $15.98 for March, 1920; and $7.68 for March, 1914. The most important changes were seasonal declines in the prices of eggs and butter, while less important declines occurred in the prices of milk, flour, beans and tea. The prices of beef, veal, mutton, pork, bacon and cheese were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.96 at the beginning of March, as compared with $22.12 for February; $21.52 for March, 1929; $21.15 for March, 1928; $21.29 for March, 1927; $21.77 for March, 1926; $21 for March, 1925; $21 for March, 1924; $21.42 for March, 1923; $20.96 for March, 1922; $23.87 for March, 1921; $25.01 for March, 1920; $20 for March, 1918; and $14.35 for March, 1914. Fuel was practically unchanged. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again substantially lower at 91·9 for March, as compared with 94·0 for February; 96·1 for March, 1929; 97·7 for March, 1928; 97·3 for March, 1927; and 101·3 for March, 1926. In the grouping according to chief component materials seven of the eight main groups de-

clined while one was unchanged. The Vegetables and Vegetable Products group and the Animals and their Products group were both substantially lower, the former due to lower prices for grains, rubber and sugar, which more than offset higher prices for oatmeal and rolled oats, and the latter due to lower prices for salmon, hides, calves, hogs, butter and eggs. The other groups which declined were: the Textiles and Textile Products group, because of lower prices for cotton, silk and wool; the Wood, Wood Products and Paper group, due to lower quotations for spruce lumber, lath and ground wood pulp; the Iron and its Products group, due to declines in the prices of steel plates, range boilers and wire nails; the Non-Ferrous Metals group, due to lower prices for lead, silver, tin, zinc and solder; and the Chemicals and Allied Products group, due to lower prices for shellac and camphor gum. The Non-Metallic Minerals and their Products group was unchanged.

Mineral Production in Quebec in 1929

A preliminary statement on mineral production in the Province of Quebec during the year 1929 recently issued by the Bureau of Mines, Department of Highways and Mines, indicates that the value of the production of mines and quarries reached a new high record of $44,814,021—an increase of $7,488,734 or 20 per cent over 1928. The preliminary production figures and valuations are subject to revision, and the final report will be published later. It is pointed out that Quebec maintains its position of third place (reached in 1918) as a mineral producer among Canadian provinces, being exceeded only by Ontario and British Columbia. The mining industry in 1929 was not unduly affected by the slight reaction in the last three months of the year, and "it is very likely that in 1930 the curve of Quebec's mineral production, which has risen steadily year by year from $19,000,000 in 1924 to $44,814,021 in 1929, will continue to show an annual increase."

The value of the 1929 mineral production is subdivided into groups as follows: Building materials, $16,951,630; non-metallic minerals, $14,233,103; metallic products, $13,629,288, these figures representing respective proportions to the total value of production of 38 per cent, 32 per cent and 30 per cent.

During the fiscal year 1929 the number of miners' certificates issued numbered 3,086, as compared with 4,090 for the preceding year. The number of claims recorded in 1929 was 9,544 as against 13,707 in 1928. While these figures would seem to indicate a decrease in prospecting activities, or in staking new ground, the apparent diminution is ascribed to the fact that prospectors gave more time to working claims already staked.

The remarkable increase in the production of the metals is considered the outstanding feature of the Quebec mining industry. Some idea of the rapid development is indicated by the fact that in 1926 the value of metallic products (lead, zinc, copper, gold and silver) was $1,900,000. In 1929 this had increased to $13,629,288. This increase is attributed to the production of the Rouyn camp and to the operation of the Horne copper smelter at Noranda.

In non-metallic minerals, asbestos showed a substantial increase both in tonnage and in value, as compared with 1928. Asbestos to the quantity of 306,055 tons, valued at $13,172,581, was shipped from the mines in 1929, while in 1928 the production was 273,033 tons valued at $11,238,361. Increases in production were also registered in mica, feldspar and magnesite.

The production of building materials and clay products for the year 1929 reached a value of $16,951,630. The preliminary figures represent but a slight decrease on the valuation of these products from 1928, a record having been established in the production of building materials during that year. Important gains were recorded during 1929 in the Portland cement industry, the valuation being in excess of 1928 by over $800,000. The consumption of cement amounted to 5,169,508 barrels which shows an appreciable increase over the previous year.

The Cape Breton Electric Company, Limited, of Sydney, Nova Scotia, has for a number of years been having a monthly inspection of its entire plant carried on by employees appointed by an Employees' Safety Council. In addition to the personal safety feature, the work of this Committee covers inspection of fire hazard and general plant housekeeping, all of which are more or less related. This Committee is given an entirely free hand and officials of the Committee do not regularly attend their meetings unless requested to do so. This is done for the purpose of removing any possible feeling that their Committee is being dominated or held down by any official.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF MARCH, 1930

DURING the month of March an application for the establishment of a Board of Conciliation and Investigation was received in the Department of Labour from checkers employed by the Canadian National Steamships on the waterfront at Halifax, N.S., being members of the Canadian Brotherhood of Railroad Employees. The application stated that the dispute grew out of the refusal of the officers of the Canadian National Steamships to meet a committee of employees for the purpose of negotiating a proposed agreement covering wages and working conditions, forty employees being directly affected.

Officers of the Department took the matter up with the representatives of the respective parties concerned and negotiations were under way at the close of the month.

The Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and the Canadian National Railways on the one hand and certain of their checkers, etc., employed on the Montreal wharf, on the other hand, was completed shortly after the close of the month by the appointment of Mr. Raoul Lacroix, of Montreal, P.Q., as third member and chairman. The appointment was made on the joint recommendation of the other board members, Messrs. Errol M. McDougall, K.C., and J. T. Foster, both of Montreal, nominees of the employers and employees, respectively.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR DURING THE FISCAL YEAR ENDING MARCH 31, 1930

DURING the past twelve months the services of the Department of Labour were utilized in connection with a number of labour disputes. In some of these cases strikes or lockouts had already occurred, and in others cessation of work appeared to be imminent or there was difficulty in carrying on negotiations in connection with wages and working conditions. In most cases the proceedings were under the provisions of the Conciliation and Labour Act, which empowers the Minister to inquire into the causes and circumstances of a dispute, and to take such steps as seem expedient for the purpose of bringing the parties together, appointing a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries by officers of the Department resulted in the settlement of the matters in dispute without further proceedings through the establishment of Boards of Conciliation and Investigation under the Act.

The following is a list of the most important cases in connection with which mediation work was performed during the year by personal intervention on the part of the Minister of Labour, or by officials of the Department, on request of one or both parties to the dispute.

Toronto, Ont.—During April, 1929, a dispute arose between the plumbers and one section of the Master Plumbers' Association which finally developed into a cessation of work involving a large number of workmen. Through direct negotiations by the Minister of Labour an agreement was finally reached and the men returned to work.

Montreal, P.Q.—Approximately 800 painters and decorators employed by various firms in Montreal declared a strike in April, 1929, demanding a wage increase from 70c. to $1.00 per hour. A representative of the Department of Labour offered his services as a mediator. Negotiations ensued which resulted in a three-year agreement being signed by 22 employers providing for a wage rate of 80c., 85c. and 90c.

Oshawa, Ont.—The tool and die makers (night shift) in the employ of the General Motors at Oshawa, Ont., ceased work in April, 1929, alleging various grievances. The Minister of Labour discussed this matter directly with the officials of the Company and as a result all the men who were available were reinstated.

Saskatoon, Sask.—The electric linesmen employed by the City of Saskatoon requested the assistance of the Department in April, 1929, in respect to certain alleged grievances having to do with wage rates. This matter was dealt with by one of the Departmental officers, who arranged a meeting between the City Commissioner and representatives of the men, and a settlement was effected.

Saint John, N.B.—In May, 1929, the blacksmiths employed by the Saint John Drydock and Shipbuilding Company, Saint John, N.B., solicited the help of the Department in bringing about a wage adjustment. A Departmental mediator was assigned to this case with the result that a mutually satisfactory agreement was signed.

Mercoal, Alta.—A dispute arose in May, 1929, between the miners and the management of the McLeod River Collieries at Mercoal, Alta., the miners alleging that their agreement had been violated, and a strike was threatened. This dispute was adjusted through the efforts of an officer of the Department of Labour.

Montreal, P.Q.—A strike involving carpenters and the General Contractors' Association at Montreal took place in May, 1929, over wage rates, a large number of men being affected. Through the efforts of a representative of the Department an agreement was reached between the parties concerned which provided for an increase in wages.

Halifax, N.S.—A representative of the Department of Labour was asked in May, 1929, to assist in the adjustment of a dispute in respect to wages, working conditions and the reinstatement of certain employees between the National Fish Company and its employees in Halifax. An arrangement was arrived at, satisfactory to all concerned.

Peterborough, Ont.—During May, 1929, a strike developed involving certain plush weavers in the employ of the Dominion Worsteds at Peterborough, Ont. The strike was due to an alleged violation of wage contracts of certain employees brought from England. Two Departmental mediators were assigned to this case and as a result the Company agreed to reinstate the men concerned. It developed, however, that the three men involved preferred to return to England. Their wishes were acceded to, the Company paying all expenses in this connection.

Ottawa, Ont.—Officials of the Local Union of Painters and Decorators were anxious to deal directly with the Master Painters in regard to wages and working conditions but were unable to bring about a meeting with their employers. In June, 1929, they applied to the Department of Labour for assistance in this matter and an attempt was made to induce the Master Painters to meet the men in committee, but without success.

Halifax, N.S.—The building trades in Halifax in the spring of 1929 were asking for a general increase in wages. Negotiations between certain organizations and the Mechanical Builders' Exchange had resulted in a deadlock. Through the efforts of a mediator of the Department of Labour new agreements satisfactory to all concerned were reached.

Nelson, B.C.—Trouble developed in July, 1929, on the Nelson *Daily News* with the result that certain printers ceased work, alleging violation of their agreement in respect to apprentices. This dispute was handled by one of the Departmental officers but a solution of the difficulty could not be reached.

London, Ont.—Milk drivers in the employ of several companies in London struck in August, 1929, for improved working conditions and a signed agreement. The strike was of very short duration and the men's claims were granted. Previous to the strike an officer of this Department was helpful to some extent and arranged conferences between employer and employee.

Fort William, Ont.—The electrical workers in the employ of the Fort William Utilities Commission and Port Arthur Utilities Commission brought to the attention of the Department their inability to solve certain difficulties existing between themselves and their employers. In August, 1929, a Departmental mediator visited Port Arthur and interviewed all concerned in the dispute. Being unable to adjust the matter locally he endeavoured to have the matter referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. The representatives of the men were quite agreeable to this procedure but the consent of the employers could not be obtained.

Prince Rupert, B.C.—The machinists in the employ of the Prince Rupert Drydock Company in August, 1929, threatened to strike over a wage dispute. Due to the efforts of a mediator of the Department of Labour the threatened strike did not ensue.

Halifax, N.S.—A number of common labourers in the employ of the Foundation Company of Canada engaged on the construction of the hotel and depot at Halifax struck in September, 1929, for a wage increase from 35c. to 40c. per hour. An officer of the Department of Labour took charge of this dispute with the result that the men were reinstated and the 40c. rate made effective.

Fort William, Ont.—Paper makers in the employ of the Great Lakes Paper Company, Fort William, Ontario, threatened to strike over wage rates in September, 1929. Through

the efforts of the Minister of Labour this strike was prevented.

Toronto, Ont.—Coppersmiths in the employ of the Coulter Copper and Brass Company, Toronto, struck in October, 1929, for increased wages. A Departmental mediator arranged several conferences between employers and employees at which he was present but a settlement could not be reached and the strike continued.

Saint John, N.B.—Machinists in the employ of T. McAvity & Sons, Saint John, in October, 1929, notified the Department that a dispute existed between their membership and the Company in respect to wage rates and asked the assistance of the Department in avoiding a serious outcome. Through mediation of a representative of the Department a mutually satisfactory agreement was reached which provided for a considerable increase in wages.

Halifax, N.S.—The union painters engaged on the new T. Eaton Company building, Halifax, threatened to strike in October, 1929, on account of the contractor employing non-union labour. Through the efforts of an officer of the Department of Labour the difficulty was adjusted.

Montreal, P.Q.—A dispute took place in October, 1929, between the operative plasterers and cement finishers and the Montreal Builders' Exchange in respect to wage rates. An officer of the Department, acting as a mediator, arranged for arbitration proceedings and through this medium a settlement was reached.

Saint John, N.B.—Machinists employed by the Saint John Drydock and Shipbuilding Company, Saint John, N.B., notified the Department in November, 1929, of their inability to reach an agreement with the Company in respect to overtime rates. A mediator of the Department arranged a meeting between the employers and employees and an agreement was reached.

Halifax, N.S.—A serious dispute arose in Halifax in December, 1929, between the longshoremen and the various shipping agencies in respect to wages and working conditions. After prolonged negotiations a mediator of the Department was successful in bringing about a satisfactory settlement and signed agreement.

Winnipeg, Man.—Employees in the Fort Rouge Rail Plant of the Canadian National Railways, Winnipeg, brought to the attention of the Department certain grievances and asked for an investigation. A mediator of the Department visited the Fort Rouge Plant and later on interviewed the Company officials. As a result of his visit certain understandings were reached which, to a considerable extent, adjusted the matters complained of.

Calgary, Alta.—Representations had been made to the Department of Labour to the effect that the wage rates on the Ghost River Power development for the Calgary Power Company were not in accordance with the prevailing rates. After thorough investigation and prolonged negotiations the Minister of Labour brought about a settlement of this dispute in December, 1929. As a result of this settlement back wages were paid to the various employees to the amount of approximately $16,000.

Winnipeg, Man.—The trackmen employed by the Winnipeg Electric Company, Winnipeg, advised the Department in December, 1929, that their agreement with this Company had been violated in connection with reduction of staff, and requested that an officer of the Department should deal with the question. An officer proceeded to Winnipeg and after several conferences with a committee of the men and also with Company officials a solution of the difficulty was found.

Halifax, N.S.—In October, 1929, labourers employed on work being done at Pier 27, South Terminals, Halifax, ceased work demanding an increase in wages from 35c. to 40c. per hour. An officer of the Department of Labour dealt with this dispute at once and a rate of 40c. per hour, which is recognized as the prevailing rate in Halifax, was put into effect.

Sydney, N.S.—The longshoremen at North Sydney brought to the Minister's attention in February, 1930, difficulty they were experiencing as to wage rates at that port and requested assistance in bringing about an adjustment of what they termed unfair conditions. An officer of the Department was assigned to this case and as a result of his efforts a considerable number of steamship agents entered into an agreement with the longshoremen's organization, which is said to be satisfactory to all concerned.

Hamilton, Ont.—In response to requests from employees of the full-fashioned hosiery department of the Mercury Mills, Hamilton, Ontario, who had ceased work in February, 1930, over a requirement of the Company that they should give advance notice in writing before becoming members of a labour organization two mediators of the Department proceeded to Hamilton and were successful in bringing about an agreement which eliminated

this requirement and provided for the reinstatement of all the employees concerned without discrimination.

Hamilton, Ont.—The printers employed by the Hamilton *Herald* and *Spectator* had reached a deadlock in their negotiations with the newspaper management in regard to a new agreement, the old agreement having expired during the negotiations, in February, 1930. This dispute had reached a stage where strike breakers were on hand and cessation of work appeared imminent. Through intervention of the Minister both sides to the dispute agreed to accept Departmental mediation. Two officers of the Department were therefore sent to Hamilton and as a result of their efforts a new wage agreement covering a period of three years was signed. This agreement provided for an increase in wages and proved satisfactory to both parties.

Guelph, Ont.—In February, 1930, the employees of the metal polishing department of the Guelph Stove Company, Guelph, informed the Department that discrimination was being shown by the Company, resulting in the laying off of two or more officials of the local Union, and further complaint of a 20 per cent reduction in piece work rates, and requested the assistance of the Department in bringing about an adjustment. Two mediators proceeded to Guelph to make an investigation and interviewed the management. The General Manager declined to make any concessions and denied that there had been any discrimination. He also declined to allow the matter in dispute to be investigated by a Board of Conciliation under the Industrial Disputes Investigation Act, although the men were quite agreeable to accepting such procedure. On March 6th the employees concerned ceased work and then negotiated with the Company officials. An agreement was reached to accept 10 per cent reduction in piece work rates and the two men who had been laid off, claiming discrimination, waived their rights to reinstatement.

Lulu Island, B.C.—In March, 1930, a dispute arose involving pile drivers employed on bridge construction at Lulu Island, B.C. This matter was brought to the attention of the Department and a satisfactory basis of settlement was reached.

CANADIAN NATIONAL RAILWAY EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Proceedings

REPORTS have been received of four cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases dealt with by this Board was given in the Labour Gazette, October, 1929, page 1086, and in previous issues; and a general summary of the proceedings of the Board from the date of its inception on September 1, 1925, to December 31, 1927, was given in the issue of October, 1928, page 1060.

This Board was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named", which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award, but it has seldom been found necessary to appoint an arbitrator.

Cases No. 49 and 50—Accounting Department, Moncton, N.B.

These cases concerned two ladies who had been employed as comptometer operators in the Auditor of Disbursements Office, and who had been transferred to the general storekeeper's office on a re-organization of staff. The employees contended that they should not be required to forfeit their seniority, and that they should be returned to their rank in the Auditor of Disbursements office. The Company contended that the employees in question retained in their new positions their former rates of salary, and also their seniority. The Board found that the employees had not been given the opportunity of exercising their seniority rights in their office in accordance with the schedule and decided that they

should be returned to that office with seniority rights unimpaired.

Case No. 51—Operating Department—Moncton, N.B.

A lady who had been employed in the local freight agent's office applied for the position of stenographer in the Freight Claims Agent's office, the application being made under Rules (*f*) and (*g*) of Article 3 of the Schedule for clerks and other classes of Employees. The company refused the application on the ground that the local freight agent desired to retain her services, and that the article cited did not apply to the case, having been made in fact after the application. The evidence showed that the application of the employee was the only one received from an employee covered by the schedule. The Board considered that in view of the circumstances the last sentence of rule (*g*) Article 3, should have been the controlling factor, and decided that the applicant should be awarded the position she applied for.

Case No. 52—Operating Department, Moncton, N.B.

A controversy arose as to the appointment of an assistant accountant in the office of the General Superintendent of Motive Power. The employees contended that the vacancy should have been bulletined in accordance with Article 3, rule (*d*), and awarded to the senior applicant. The company denied this contention, asserting that the position in question was not covered by the schedule. The evidence showed that when the accounting staff in this office was set up no agreement was reached as to which positions, if any, would be exempted from the schedule. The Board considered that this should have been done, and that the employees in the group concerned should have been given an opportunity of applying for the vacant position. The Board therefore decided that applications from this group should now be given due consideration with a view to the appointment of senior qualified applicant. The Board also recommended that the parties to the dispute should confer with a view to reaching an amicable agreement as to the schedule status of the position.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1930

THE number of strikes and lockouts in existence in Canada during March was three, as compared with five the preceding month. The time loss for the month was less than half that occurring during February, when a strike of women's clothing factory workers in Toronto, involving approximately 2,000 workers, caused about 12,000 days' time loss. As compared with March, 1929, the figures for March, 1930, show that, owing to a strike of 1,500 workers, about the same number of workers were involved in the three disputes occurring this year as in the fourteen which were recorded for the same month in 1929, the time loss being somewhat greater.

Date	Number of disputes	Number of employees involved	Time loss in working days
*March, 1930.....	3	1,583	5,484
*February, 1930.....	5	2,952	13,840
March, 1929.....	14	1,508	3,723

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

No disputes were carried over from February but three disputes commenced during March, one of which terminated during the month in favour of the workers. At the end of March, therefore, there were two disputes recorded as strikes or lockouts, as follows: men's clothing factory workers, Montreal, P.Q., and painters at Toronto, Ont.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to five such disputes, namely: electrotypers, Toronto, Ont., Dec. 20, 1926, one employer; plumbers, Kingston, Ont.,

April 2, 1928, several employers; photo engravers, Toronto, Ont., Jan. 7, 1929, one employer; moulders, Lachine, P.Q., May 2, 1929, one employer, and shoe factory workers, Montreal, P.Q., Jan. 23, 1930, one employer.

A minor dispute involving metal polishers in a stove manufacturing establishment in Guelph has been reported, involving seventeen employees for one-half day. The employer had announced a wage reduction in piece-rates, to which the employees objected and ceased work. The employees involved had a short time previously organized a local of the International Metal Polishers' Union, and two employees who had become officers were dismissed, while a third resigned expecting to be dismissed. Intervention of the Department of Labour was requested owing to this apparent interference with freedom of association and conciliation officers interviewed the parties. The employer stated that the men had not been dismissed for union activity, but that while senior employees and competent workmen, a reduction in staff being necessary, these were considered best able financially to be unemployed. He also stated that he would not recognize the union and refused to reinstate the dismissed employees. As the result of the reduction in wages on March 6 the international vice-president of the union came again to Guelph, a modification of the decrease in wages was arranged, and the management agreed to deal with a committee of employees, the seventeen employees involved resuming work next morning. The employer has reported that the cessation of work for the one-half day was arranged between the employees and the foreman in order to discuss the matter.

A dispute in Toronto between the plumbers' union and certain master plumbers was reported, involving in certain cases a stoppage of work by plumbing contractors on construction jobs since March 19. It appears that on March 14 the plumbers' union passed a resolution to be effective from March 19: "That only members of Local Union 46 and duly indentured apprentices under the Ontario Apprenticeship Act, shall handle any tools of the trades or do any mechanical work at the trade, or handle any plumbing or heating material on the building or job." Certain contractors on being notified of this resolution objected that it would be impracticable to carry out their contracts if they were not allowed to employ labourers and helpers to handle materials, etc., and stopped work on certain jobs until the matter had been arranged. The contractors also appealed to the international union headquarters and the international organizer for Canada was instructed to take the matter up in Toronto.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

Women's Clothing Factory Workers, Montreal, P.Q.—Employees in some seventy-two women's clothing factories in Montreal ceased work on March 10 to secure a union agreement involving higher wages, shorter hours, and other union shop conditions. On March 13 work was resumed, an agreement between the International Ladies' Garment Workers' Union and the employers' association providing for the conditions demanded. Certain independent employers also signed the agreement and the union states that the agreement applies to all the factories in Montreal in this line of production. The text of the agreement is given elsewhere in this issue.

Men's Clothing Factory Workers, Montreal, P.Q.—Employees in one factory in Montreal ceased work on March 18 to secure recognition of the union and union wages and working conditions. The employer reported that the strikers were almost immediately replaced. The union states that the firm is unable to carry on its operations and that it is unable to get work done in contract clothing shops as the union will not allow it. The union also reports that buttonhole makers joined the original strikers, tailors, a week later. In connection with picketing a certain number of strikers were arrested and charged with intimidation but were released on bail.

Painters, Toronto, Ont.—Painters employed by one painting contractor in Toronto ceased work on March 18 to secure an increase in wages to 85 cents per hour until May 1 and after that $1 per hour. At the end of the month the dispute was unterminated. It has been reported that a number of strikers were arrested in connection with picketing and were charged with vagrancy but were acquitted. Action is reported to have been taken by the Canadian Labour Defence League and the International Painters' Union to determine the rights of strikers to peaceful picketing.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1930

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) **Strikes and Lockouts in Progress Prior to March, 1930**

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain and Northern Ireland

The number of disputes which began during February was 32, while 10 disputes were in progress from the previous month, making a total of 42 disputes in progress during the month, involving 9,300 workpeople and resulting in a time loss of 79,000 working days for the month. Of the 32 disputes beginning in February, 2 arose out of demands for increases in wages, 8 over proposed reductions in wages, 9 over other wages questions, 6 over questions respecting the employment of particular classes or persons, one over working arrangements, and 6 on questions of trade union principle. Settlements were reached in 29 disputes, of which 8 were in favour of workpeople, 9 in favour of employers and 12 ended in compromises. In the case of two other disputes, work was resumed pending negotiations.

A strike involving about 3,300 insurance agents employed by a co-operative society lasted for over two weeks in February. The demand of the strikers was for increased rates of remuneration, and the strike was settled when the agents agreed to accept a guarantee of 50 shillings per week, with no change in commission rates.

Irish Free State

For the year 1929, the number of disputes which began was 53, the number of workpeople involved in all disputes was 4,533, and

the time loss for the year was 101,397 working days. Of the 53 disputes which began in the year, 26 concerned wages questions, 4 were over hours of labour, 11 over the engagement or dismissal of workers, 11 over other matters concerning conditions of employment, and one on a trade union question.

Settlements were reached in 50 disputes. Of these, workers' claims were wholly admitted in 11, partially admitted in 12, rejected in 6; employers' claims were wholly successful in 5, partially successful in 9, and rejected in 6 cases; in addition, one dispute had an indeterminate result.

The following table gives a classification of the disputes in the year by industries:—

INDUSTRIAL DISPUTES IN THE IRISH FREE STATE DURING 1929, BY INDUSTRIES

Industry group	Number of disputes	Work-people involved	Working days lost
Mining and quarrying	4	198	3,241
Food, drink and tobacco	7	550	3,678
Textile			
Clothing, boot and shoe	2	10	142
Furniture and wood working	4	127	3,039
Engineering and shipbuilding	2	380	7,550
Chemical			
Printing and paper			
Building and allied trades	10	494	13,317
Gas, water and electricity	2	48	288
Railway, tram and omnibus	4	2,043	63,150
Other transport (dock labour, etc.)	4	284	1,165
Retail trades			
Public utility services	9	309	5,341
General and miscellaneous trades	5	90	486
Total	53	4,533	101,397

Cuba

A general strike took place in Cuba on March 20, in protest against employment conditions and against the arrest of certain labour leaders. The strike lasted for 24 hours only and it was reported that about 200,000 workers were involved. The strike however did not affect railways or public utilities and no disturbances were reported.

Australia

The number of disputes reported for the third quarter of 1929 was 57, directly involving 11,626 workpeople and resulting in a time loss of 1,106,499 working days for the period. The estimated loss in wages was £1,264,875.

The dispute involving coal miners in New South Wales against reductions in wages, which began on March 31, 1929, is still in progress.

United States

The number of disputes which began in January was 32, involving 9,579 workers, while 7,504 workers were involved in disputes in effect at the end of the month. The time loss in January was 284,217 working days.

Conciliation and Arbitration in Queensland, Australia

A new Industrial and Conciliation and Arbitration Act became effective in Queensland, Australia, on January 23, 1930. The Minister of Labour and Industry for the State, Mr. H. E. Sizer, explained the provisions of the Act in a statement reproduced in the *Queensland Industrial Gazette*, February 24, 1930. "The Act," he said, "differs in many vital particulars from that which it repealed. The main items on which the two Acts differ are jurisdiction, payment for holidays, preference to unionists, and methods of procedure and making awards. The court constituted by the judge and the two Conciliation Commissioners has power to make declarations as to the basic wage and the maximum weekly hours to be worked in industry, or in respect of particular industries. In cases where the court is of opinion that an industry is not of average prosperity, and that serious unemployment has resulted or will result from the operation of an award, it may rescind or cancel any award, or exempt wholly or partly from the provisions of an award any employees, and permit of an agreement being made upon such bases as it may prescribe, or have full discretion to make any award it thinks fit in the circumstances.

"On the question of procedure the basic principle of the new Act is conciliation, and, for that purpose, it is prescribed that before the court deals with any matter, such matter shall be referred to a Conciliation Board, consisting of a conciliation commissioner as chairman, and an equal number of representatives of employers and employees. Any agreement which has been arrived at by the representatives of a Conciliation Board is to be an agreement under the Act, and to be registered as such by the board. The conciliation commissioner may only refer to the court such matters or things upon which no agreement can be arrived at before the board, and concerning which he certifies that there have been several genuine attempts to come to an agreement within the space of three months before such matters have been referred to the court. It is, however, provided that in the case of a dispute which the commissioner thinks should in the public interest be referred to the court before the expiration of three months, the Commissioner is empowered to refer the dispute to the court at any time he thinks fit."

Establishment of Boards.—According to the regulations issued under the Act, the establishing of a conciliation board originates with a court determination, signed by a judge and forwarded to the Minister of Labour. Within seven days after the Governor in Council has declared the designation of the board, the court appoints one of the Conciliation commissioners to be chairman, notifying the Minister of such appointment. If the board chairman considers it impracticable or inadvisable to constitute a board of actual employers and employees, he is obliged, within seven days after his appointment, to hand to the Registrar a certificate to that effect. Then the Registrar's duty is to forward, within two days, this certificate to the Minister. If, however, no such certificate is received by the Registrar within the prescribed time, his next course is to notify all industrial unions of employers and employees having members affected and fix a time (no longer than fourteen days) within which they may nominate members to act on the board. If either party fails to nominate representatives the chairman is authorized to recommend to the Minister the appointment of persons representative of the employers or employees, or both, as the situation demands. Where there is no registered industrial union of either employers or employees, the Registrar is empowered to notify any voluntary association of employers or employees having members affected, and call upon such an association to nominate members.

Canadian Forestry Association

The Canadian Forestry Association recently published an illustrated circular explaining the organization and purposes of this organization, which is described as "a union of 32,000 citizens in defence of the woods, waters and wild life" of the Dominion. The work of the Association is outlined as follows: It (1) maintains fourteen field campaigns, holding 2,000 public mass meetings a year to enlist the Canadian public in forest conservation and (on the prairies) tree planting. The Association makes two million human contacts annually; (2) handles every fortnight twelve thousand schools throughout Canada with teaching material eagerly utilized by the teachers before a multitude of young Canadians; (3) publishes on a non-profit basis *Illustrated Canadian Forest and Outdoors* and *La Forêt et la Ferme*, both serving the cause of conservation; (4) maintains an active publicity bureau reaching hundreds of Canadian newspapers and magazines with a constructive educational service; (5) maintains a vigorous British Columbia Branch office at Vancouver in charge of experienced forest protection experts and educationists; (6) devotes thousands of dollars a year to encouragement of tree planting on the bare prairies, and is rewarded by more than forty thousand attendance at prairie meetings annually and a widespread adoption of actual tree planting; (7) promotes better conservation laws and more adequate enforcement of them and provides through an instructed public the only sure basis for sound law and administration; (8) carries out all campaigns on a firm trust in the intelligence and courage of the Canadian people and with unswerving devotion to the true interests of our Dominion; (9) without endowment, or reserve funds, or any identification with government departments or commercial organizations, the Canadian Forestry Association depends wholly upon voluntary financial support.

The Canadian Forestry Association is an independent educative institution in the service of the people of Canada. It is "non-government" and non-commercial and is managed by a Board of Directors elected annually in open meeting. The head office of the association is in the Standard Bank Building, Ottawa.

FAIR WAGES AND AN EIGHT HOUR DAY FOR DOMINION GOVERNMENT EMPLOYEES

THE Honourable Peter Heenan, Minister of Labour introduced in the House of Commons on April 1 a Government bill respecting fair wages and an eight-hour day for labour employed on public works of the Dominion of Canada. This measure was given second reading on April 10 and passed the Committee stage on the same date. In introducing the bill the Minister observed that its purpose was threefold:—to give statutory authority for the observance on contracts for Dominion public works of the rates of wages which are generally accepted as current from time to time for competent workmen in the district in which the work is being performed; to provide that the wages shall in all cases be fair and reasonable; and to declare that the working hours of persons employed by contractors or by the Government itself on public works of the Dominion of Canada shall not exceed eight hours per day, except in such special cases as the Governor in Council may otherwise provide, and in cases of emergency.

On motion for the second reading, Hon. Mr. Heenan outlined the history of the Fair Wages Policy of the Dominion Government, beginning with the year 1897, when Sir William Mulock, then Postmaster General, appointed Mr. W. L. Mackenzie King to investigate the conditions under which supplies for the Dominion Government were manufactured. As the result of Mr. King's report Sir William Mulock introduced the first Fair Wage Resolution which was adopted by the House of Commons in 1900, as follows:—

"That it be resolved, that all government contracts should contain such conditions as will prevent abuses, which may arise from the subletting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this house cordially concurs in such policy, and deems it the duty of the government to take immediate steps to give effect thereto. It is hereby declared that the work to which the foregoing policy shall apply includes not only work undertaken by the government itself, but also all works aided by grant of the Dominion public funds."

"In conformity with that resolution," Mr. Heenan continued, "there has been inserted in government contracts ever since a clause requiring the observance of the current rate of wages and working hours in the districts where the work is being done, and it has been provided also that in the event of any dispute arising as to what were current wages or hours, the dispute should be settled by the Minister of Labour. In most cases the fair or reasonable wages have been embodied in the schedules, and in other cases this has been done by way of a general fair wage clause. For the information of the House, I might say that where a contract can be carried out within a reasonable time, say a year, the schedule of wages has been embodied in the contract, but where it is to be expected that the work will take three or four years, as was the case with the Welland canal, a general fair wage clause is inserted to the effect that wages will be based on the conditions prevailing from time to time. That is what is known as the general wage contract.

"In 1907, the present Speaker of the House of Commons, then Minister of Labour, recommended to the Governor in Council that the schedule of wages to be paid to the workmen should be posted in a conspicuous place, so that the men could observe what they were entitled to. He recommended also that the books of the employers should be open for inspection, and fair wage officers were employed by the government to go around to see that the fair wage clause was being carried out.

"In 1922 the Hon. James Murdock, then Minister of Labour, in order to provide for more uniformity in the administration of the policy, put through an order in council to take care of every eventuality which could be conceived, and the matter has been handled in that way ever since."

In Committee of the whole House two amendments were made in Section 3 of the bill on the suggestion of the Minister of Labour. The text of the bill as it stands for third reading in the House of Commons is as follows:—

Text of Bill

AN ACT RESPECTING FAIR WAGES AND AN EIGHT HOUR DAY FOR LABOUR EMPLOYED ON PUBLIC WORKS OF THE DOMINION OF CANADA.

1. This Act may be cited as The Fair Wages and Eight Hour Day Act, 1930.

2. In this Act the expression "Minister" means the Minister of Labour.

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work

shall be subject to the following conditions respecting wages and hours:—

(*a*) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(*b*) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory established for the purpose of the work contemplated.

4. The wages and hours of all workmen employed by the Government of Canada on such works as are described in section three, and who are excluded from the operation of the *Civil Service Act*, shall be those set forth in paragraphs (*a*) and (*b*) of section three.

5. (1) The Governor in Council, on the recommendation of the Minister, may make regulations with regard to wages and hours herein provided for and without limiting the generality of the foregoing may provide by regulation for,—

(*a*) the method of determining what are current or fair and reasonable wages and the preparation and use of schedules of rates relating thereto,

(*b*) rates of wages for overtime,

(*c*) classifications of employment or work,

(*d*) the publication and posting of wage schedules,

(*e*) payment of wages to employees in case of default by the contractor or other party charged with such payment and recovery thereof from such contractor or other party,

(*f*) the keeping of proper books and records and the examination of the same by Government officers,

(*g*) persons who may be employed on works referred to in this Act,

(*h*) the subletting of contracts,

(*i*) the penalties to be imposed for breaches of the provisions of this Act or regulations made hereunder,

(*j*) generally for the due enforcement of the provisions of the Act and regulations.

(2) All regulations made under this Act shall, from the date of their publication in the *Canada Gazette*, have the same force and effect as if they had been included herein.

EIGHT-HOUR DAY FOR DOMINION GOVERNMENT EMPLOYEES

Order in Council, P.C. 670, approved by His Excellency the Governor General on the 27th March, 1930.

THE Committee of the Privy Council have had before them a Report, dated March 19, 1930, from the Minister of Labour, submitting as follows:—

1. That it was recognized in the Labour Part of the Treaty of Versailles and the corresponding provisions of the other Treaties of Peace, that the well-being—physical, moral and intellectual—of industrial wage earners is of supreme international importance, and that although differences of climate, habits and customs, economic principles and industrial traditions, make strict uniformity in the conditions of labour difficult of immediate attainment, there are methods and principles for regulating labour conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit.

2. That approval was expressed in the Peace Treaties of the principle of the eight-hour working day.

3. That a Draft Convention was adopted at the First Session of the Conference of the International Labour Organization (League of Nations) in 1919 to limit hours of work in industrial undertakings to eight hours per day.

4. That the Draft Convention above mentioned was referred in 1924 to the Select Standing Committee on Industrial and International Relations of the House of Commons of Canada for examination and report.

5. That on the recommendation of the Committee on Industrial and International Relations of the House of Commons, approved by the House of Commons, the Draft Convention on hours of work in industrial undertakings was referred by Order in Council to

the Supreme Court of Canada with a view to determining the jurisdiction of the federal and provincial authorities, respectively, on this subject.

6. That the judgment of the Supreme Court of Canada contained the following declaration: "The subject matter is generally within the competence of the legislatures of the provinces but the authority vested in these legislatures does not enable them to give the force of law to provisions such as those contained in the Draft Convention in relation to servants of the Dominion Government, or to legislate for those parts of Canada which are not within the boundaries of a province.

7. That a report from the Civil Service Commission, which was submitted to Your Excellency in Council under date of February 16, 1925, showed that the standard daily hours of work of monthly rate employees in the Government departments are from 9 a.m. to 5 p.m., with an interval for luncheon and a half-holiday on Saturday, and that the standard hours of prevailing rate employees, numbering 1,576 in Ottawa and 18,264 outside Ottawa (of whom 12,247 were postmasters paid on percentage basis), are 44 hours per week, based on an eight-hour day for five days, and 4 hours, or a half-day, on Saturday. Certain exceptions to these standard hours of work were also noted in the report of the Civil Service Commission.

8. That request has been made to the Government for the granting of the eight-hour day to its own employees.

9. That it is desirable that the principle of the eight-hour day should be applied to any branches of the public service of Canada in which it is not now observed.

The Minister accordingly recommends that, except in cases where the work of employees is intermittent in character, or the application of this rule is not deemed to be practicable or in the public interest, the hours of work of any employees of the Dominion Government who are still required to work more than eight hours daily be reduced to eight hours daily, with a half-holiday on Saturday.

The Committee concur in the foregoing recommendation and submit the same for approval.

(Sgd.) E. J. LEMAIRE,
Clerk of the Privy Council.

Mineral Production of Canada in 1929

A preliminary report on the mineral production of Canada during the calendar year 1929, published recently by the Dominion Bureau of Statistics, states that for the fourth year in succession the mining industry in Canada reached a new high record of production. Gains of $19.6 millions in the value of copper and nickel output, $2.6 millions in the value of cement, $3.69 millions in other structural materials such as brick, lime, stone sand and gravel, a rise of $1.38 millions in the value of lead and zinc, $1.93 millions advance in the value of asbestos, and $1.75 millions greater value in crude petroleum, were high lights in Canada's greatest mining year when the total output was valued at $307,146,494 or 11.69 per cent more than the valuation of the previous year's production. Lower values in a few items including silver and gypsum, left the net gain for the year at $32,157,007.

New records were established in 1929 in the output of asbestos, cement, clay products, copper, gold, lime, nickel, petroleum, salt, stone, and zinc.

Metals as a group showed the greatest gain with a total valuation of $153,694,303 as compared with $132,012,454 in 1928. This was a gain of $21,681,849 or 16.4 per cent. Fuels, valued at $76,721,864 as compared with $74,413,160 in the preceding year, showed a net gain of 3.1 per cent or $2,308,704. Other non-metallics including asbestos, feldspar, gypsum, mica, quartz, salt, talc and soapstone had a value of $20,698,481, compared with $18,826,692 in 1928. Gains made in this group were 9.9 per cent or $1,871,789. Structural materials including brick, tile, cement, lime stone and sand and gravel were valued at $56,031,846 compared with $49,737,181 in 1928 and showed a gain of 12.65 per cent or $6,294,665.

The general chairmen representing the labour unions on the Canadian National Railways were convened at Montreal during February by Mr. W. D. Robb, vice-president of the system, for the purpose of considering a proposal to consolidate into one company the various sickness benefit and insurance societies now acting on behalf of the employees. A committee was elected to study the proposal and it will present a report at a further conference. If an agreement should be reached on the lines of the proposal, it will be submitted for approval to the employees affected, who number about 120,000. An account of the C.N.R. pensions scheme was given in the LABOUR GAZETTE, January 1930, page 26.

OLD AGE PENSIONS IN NEW BRUNSWICK

Interim Report of Provincial Commission

THE appointment of a Provincial Commission in New Brunswick to consider the question of participation by the province in the Old Age Pensions Act of the Dominion, was noted in the Labour Gazette, December, 1929, page 1320. Subsequently, on a suggestion offered by organized labour, the Commission was requested to investigate the question of mothers' allowances. The Commission presented to the Legislature on April 1 an interim report, containing the preliminary results of their investigations on old age pensions. At this stage it was found impossible to include a report on mothers' allowances, but the subject will be dealt with in the final report to be presented later.

The Commissioners are as follows:—Chairman, Mr. Justice W. C. H. Grimmer, of the Chancery Division of the New Brunswick Supreme Court; Mrs. H. F. McLeod, Fredericton; Mrs. J. B. Chouinard, St. Quentin; Mr. Oscar J. Dick, Saint John; Mr. George A. Stone, Moncton; and Mr. R. A. Cross, St. George.

Interim Report

The report opens with an account of the methods followed by the Commissioners in obtaining information as to the operation of old age pensions in those provinces which have already entered the Dominion scheme, namely British Columbia, Saskatchewan, Alberta, Ontario and Manitoba, valuable help being secured from the pension authorities in these provinces. An estimate was made of the number of persons of seventy years of age and upwards, resident in the province, who might be eligible for pensions. One method followed was to send out questionnaires, through the postmasters of the province, with the co-operation of the Postmaster General, for delivery to persons who might be eligible. The assistance of public bodies, clergymen and social workers, was also enlisted. Information as to population of the province by eligible age groups based on the census of 1921, and subsequent estimates, was also obtained from the Dominion Bureau of Statistics.

The results tentatively reached by means of the inquiries from these and other sources are stated as follows:—

"Your Commission estimates the number of persons seventy years of age or over in New Brunswick, say of January 1, 1930, to be in round numbers 16,000.

Cost of Old Age Pensions in New Brunswick.—"Your Commission feels that the statistical returns which it has received at the present time, as have been herein described, furnish a fairly reliable basis upon which an estimate of the probable cost of old age pensions in the province may be based. The calculation is based upon the assumption that the financial condition of the persons who would be eligible for pensions may be taken from the questionnaires which have been received, and no account is taken of the number of persons who would be excluded from receiving pensions on account of residence qualifications since our inquiry proved those to be practically negligible.

"The income distribution for eligible pensioners in this province was obtained as set out in the following table:—

Income Distribution

Annual Income	No. of Persons
$300 to $365	198
$200 to $299	423
$126 to $199	457
$125 and under	7,373
Total number of pensioners	8,451
Average monthly pension	$ 19 29
Total estimated cost of Pensions on above basis	$1,956,000

7,373 pensioners with incomes of $125 or less receive $240 each.
457 pensioners with incomes from $126 to $199 receive $220 each.
621 pensioners with incomes from $200 to $350 receive $140 each.

"The computation and estimate above set forth is based upon information gathered by the Commission, and from the answers contained in 9,628 questionnaires that have been returned to it. Of this number 8,451 appear to be eligibles, while 1,177 are disqualified either by reason of their present incomes, residence qualification, or under the age limit.

"The total amount payable in pensions according to this computation would be roughly $1,956,000. . . . of which sum the Federal Government would pay one-half and the Provincial Government would be liable for the same amount, plus cost of administration. As the Federal Government does not pay its proportion of the amount of pensions expended in one quarter till the beginning of the next quarter, the province in addition would have to bear the interest charges on the amount of the Federal allowance from the time the pensions were paid until reimbursed."

The report next calls attention to the probable effects of the operation of section 10 of the Dominion Act, providing for the reciprocal liability of the various provinces that have entered the scheme in regard to old age pensioners who have moved their place of residence from one province to another during the past twenty years. "The effect of this clause," the commissioners state, "would be to enlarge the number of pensioners to some extent for which New Brunswick would be partly responsible, and since most of the immigration has been from east to west, it is improbable that New Brunswick would be able to claim reimbursement from any of the other provinces under the provisions of this Act. This clause would also add to the cost of administration, owing to the difficulty in verifying the length of residence in the different provinces."

Cost of Administration.—The commissioners consider that the cost of administrating old age pensions in New Brunswick would probably be somewhat higher than in the other provinces on account of the high percentage of eligibles. They suggest that "the administration of the Act in this province might very well be delegated to the Workmen's Compensation Board, which with the appointment of additional staff would be well equipped to administer the same; and further suggests from the information at hand that if this is done the administration costs need not exceed from $12,000 to $15,000 per year.

It is pointed out that "while this is not to be considered in any way as a final report, and the survey and investigation authorized under and by the Commission is not complete, still there is sufficient authority for stating that the cost of old age pensions will place a fairly heavy burden upon this province."

Problem in Eastern Provinces.—The report points out that "none of the eastern provinces of Canada have so far adopted old age pensions in co-operation with the Federal Act. It may be fairly stated this is not due to lack of appreciation of the problems of the aged dependents, but rather to the question of expediency and ability to carry the burden. They have hesitated on account of the less favourable age situation as compared with the Western Provinces, and because the adoption of pension schemes would involve a much larger financial burden than in the West. . .

"That the subject of old age pensions has awakened a lively interest (that is, in New Brunswick) is fully instanced in that while the estimate of the census authorities places the number of persons of seventy years of age and upwards in this province at 16,000, the Commission has recorded the names of over 15,000 of this number, and has questionnaires from over 9,628 of them. It is a fair estimate that the 16,000 comprises practically the full number of persons of seventy years of age in the province. One thing is sure—the 15,000 now registered embraces a very large number of persons who are not eligible for pensions, and who when weeded out will substantially reduce the number of eligibles as estimated herein."

The report contains a summary of the pension systems existing in other countries, and also describes the methods in force in other Canadian provinces for giving effect to the Dominion scheme.

REPORT OF BUREAU OF LABOUR OF MANITOBA FOR 1928-29

THE Bureau of Labour and Fires Prevention Branch of the Department of Public Works, Province of Manitoba, has issued its fourteenth annual report dealing with its activities for the year ending April 30, 1929. The Bureau is responsible for the administration of the following legislation: The Bureau of Labour Act; the Manitoba Factories Act; the Bake Shops Act; the Shops Regulation Act; the Minimum Wage Act; the Elevator and Hoist Act; the Steam Boiler Act; the Building Trades Protection Act; the Public Buildings Act; the Fair Wage Act; the Electricians' Licence Act; the Public Amusements Act (licensing of cinema projectionists); the Fires Prevention Act, and the One Day Rest in Seven Act.

Summary tables in the report indicate the number and nature of the inspections carried out and orders issued under the above-mentioned Acts. During the year, the total number of inspections was 19,929 and there were 11,066 orders issued. All the orders issued under the various Acts were for improvements in the interests of safety or health and sanitation. Only two cases of child labour were found and orders were given (and complied with) to have the conditions remedied. Under the Factories Act there were 1,981 inspections with 1,641 orders for safety improvements and 247 orders for bettering health and sanitary conditions.

The accompanying table indicates the number of inspections and orders in connection with the administration of the various Acts.

Statute	No. of Inspections	No. of Orders
The Manitoba Factories Act	2,088	1,964
The Bake Shops Act	87	95
The Shops Regulation Act	249	168
The Minimum Wage Act	2,978	1,209
The Elevator and Hoist Act	5,076	2,588
The Steam Boiler Act	4,450	1,639
The Building Trades Protection Act	1,228	536
The Public Buildings Act	51	35
The Electricians Licence Act	181	18
The Public Amusements Act	252	117
The Fires Prevention Act	2,746	2,438
The One Day Rest in Seven Act	543	259
	19,929	11,066

Industrial Accidents.—The following table indicates the number of accidents reported to the Bureau for the year ending April 30, 1929:—

Group	Fatal	Miscellaneous	Total
Industrial	17	6,477	6,494
Building trades	7	417	424
Elevators	1	9	10
Grand total			6,928

The report gives particulars concerning each fatal accident, and also of investigations into other fatalities not coming under its jurisdiction. In connection with industrial accidents, the Bureau made 802 special investigations.

Accident Prevention.—As regards accident prevention, the report observes: "Experience has shown that accident prevention is a real business proposition, economically and morally sound, working out its problems under the following headings: (1) *Engineering,* which in short means the study of accidents and their causes, then the establishment of safe conditions and practices; (2) *Education,* by arousing employers and employees to the vital needs for personal carefulness in avoiding accidents; (3) *Enforcement,* by compelling the thoughtless minority to observe and obey the safe practices which the majority have adopted through education and experience.

"Statistics show that the number of preventable accidents are increasing every year. A large number of our industrial accidents do not just happen—they are caused, and very often through thoughtlessness. Investigation of accidents, by the Bureau has proved that the human factor contributes largely to our ever-increasing accident frequency.

"It is gratifying to report that at the last session of the Legislature, an appropriation was passed for accident prevention. It is proposed by the Bureau to launch an educational campaign and bulletin service forthwith, and to further develop the formation of safety committees in all industries where possible in the hope that very beneficial results will obtain from such course of action."

First Aid.—In connection with this work, the report points out that the Bureau, with some financial assistance from the Workmen's Compensation Board, has conducted a series of first aid classes. The report considered that "first aid does create a watchful interest towards the prevention of accidents" as well as reducing the fatal tendencies of accidents. During the year, there were 264 students instructed, there being 156 successful graduates.

Building Trades Protection.—During the year, special attention was given to inspections under the Building Trades Protection Act. The report considers that not only are these inspections contributory toward accident prevention, but they are also being welcomed by employers, who frequently request inspection of some particular situation.

The Fair Wage Act.—During the fiscal year the Fair Wage Board held 11 meetings. The schedule for the City of Winnipeg was revised and became effective from May 1, 1929, to April 30, 1930.

Prosecutions.—There were five prosecutions during the year for violation of various Acts administered, i.e., one under the Minimum Wage Act, two under the Factories Act, and two under the Electricians Licence Act. In these cases convictions, with fines and costs, were obtained, while stay of proceedings was granted, in two other cases.

During the year, 157 complaints under the several Acts, were received and adjusted, 130 of these being in connection with the Minimum Wage Act.

Unemployment Relief.—In an appendix to the report, statistics are given in connection with destitution and unemployment relief This phase of the work is outlined as follows:—

"During the winter of 1928-1929, the provincial government again came to the assistance of cities and municipalities wherein unemployment became acute necessitating relief to persons made destitute through this cause.

"This made the ninth consecutive winter during which the government of Manitoba participated in unemployment relief, and it is only fair to say that Manitoba is, apparently,

the only provincial government, in fact, the only government in Canada, having a definite policy in regard to this very important problem. The method followed is practically the same as was suggested and initiated by the Federal government in the fall of 1920, i.e., that municipalities be granted a percentage of the cost of relief or work organized to relieve unemployment."

The financial extent to which the provincial government assisted the municipalities in dealing with the unemployment situation during the past nine winters is summarized as follows:—

Winter 1920-1921.. ..		$ 78,952 28
Winter 1921-1922.. ..		151,718 85
Winter 1922-1923.. ..		63,542 80
Winter 1923-1924.. ..		55,104 39
Winter 1924-1925.. ..	$ 61,064 79	
Less refund..	2,455 47	
		58,609 32
Winter 1925-1926.. ..		16,567 57
Winter 1926-1927.. ..		9,640 41
Winter 1927-1928.. ..		11,552 58
Winter 1928-1929.. ..		10,962 82

Minimum Wages for Women

In regard to the administration of the Minimum Wage Act, the report refers to the death of Mr. L. J. Rumford, whose place on the Board was filled by the appointment of Mr. E. C. Stovel, the personnel of the Board now being as follows:—Geo. N. Jackson, chairman; Mrs. Edna M. Nash and Mr. E. C. Stovel, representing the employers; Mrs. Jessie Maclennan and Mr. James Winning, representing the employees.

During the year the Board held 19 meetings. On August 1, 1928, Regulation No. 10, covering bag factories in all sections of Manitoba, became effective. There was one prosecution under Regulation No. 5, governing hotels, etc., in which case conviction was obtained, a fine of $25 and costs imposed, and an order made for the repayment of $36.84 wages due. Twenty-nine claims for wages were adjusted, involving the sum of $423.68, without recourse to prosecution. In Winnipeg and district, 2,430 inspections were made, and of the resulting orders, 158 concerned working conditions, 493 had to do with hours of work and 506 concerned wages. Outside of Winnipeg, the number of inspections totalled 98 and the corresponding numbers of orders were 5, 11, and 31 respectively. Overtime permits were issued to the number of 183, and 21 for legal holidays, the largest number of such permits being in laundries, and offices.

In addition to the above work, a survey of boys working in industry was made in connection with which there were 450 inspections. A detailed report of this survey was submitted to the 1928-1929 session of the Legislature.

WORKMEN'S COMPENSATION IN QUEBEC IN 1929

THE second report of the Workmen's Compensation Commission of the Province of Quebec outlines its activities during the calendar year 1929, being the first complete year during which the Act was in operation. A preliminary report, outlining the administration of the Act during the twelve months ending September 30, 1929, was reviewed in the Labour Gazette, January, 1930, page 22. The provisions of the Workmen's Compensation Act, which came into force on September 1, 1928, were detailed in the Labour Gazette, May, 1928, page 459.

The Act applies to the work of building, including the business of demolishing; to factories, manufactories, or workshops; stone, wood or coal yards; lumbering operations, including protection service and the floating of timber; any transportation business by land or by water or loading or unloading; any gas or electrical business; the business of building, repairing, or maintaining public roads, railways, tramways, telephones, telegraphs, water works, drains, sewers, dams, wharves, docks, elevators, bridges or other similar work; mines or quarries; any industrial enterprise or yard in which explosives are manufactured, used or kept, or in which machinery is used, operated by mechanical power, but only if the accident is caused by such machine or the discharge of such explosives; any commercial establishment, but only if the accident which happens in such an establishment is caused by an elevator to the persons in charge of same, or if the accident happens in a workshop forming part of the establishment, and is caused to workmen of such workshop by machinery operated by mechanical power.

Agricultural industries and domestic service are excluded, as is also navigation by means of sails, even when the vessel is equipped with an auxiliary motor. An employer of less

than seven workmen is not subject to the provisions of the Act, but may place himself under its provisions by giving notice in proper form to the Workmen's Compensation Commission. The Provincial Government and corporations are subject to the Act when carrying on any enterprise within its scope.

Insurance.—All employers in enterprises covered by the Act, with the exception of the Crown and municipal, school, ecclesiastical and governmental corporations, and of railways under the control of the Parliament of Canada, must insure in an approved fixed premium or mutual insurance company. The Commission may, however, at its discretion, exempt an employer and grant him a licence to be his own insurer.

Claims and Awards.—In the course of the year the Commission received 25,610 reports of accidents, and disposed of 26,781 files, including those which were in suspense at the end of 1928. Indemnity was granted in 21,377 cases, classified as follows: temporary total incapacity, 18,728; permanent incapacity, 2,497; fatal accidents, 152. Of the 18,728 cases of compensation for temporary total incapacity, 13,295 were payable by insured employers; 5,363 by self-insurers and 70 by employers who were neither insured nor self-insurers at the time of the award. In the permanent incapacity group, 1,781 cases were payable by insured employers; 699 by self-insurers, and 17 by employers who were neither insured nor self-insurers. Of the fatal accident indemnities, 82 were payable by insured employers, 69 by self-insurers and 1 by an employer was not either insured or a self-insurer.

There was no award in 5,404 cases. Of this number, there were 2,231 cases in which the temporary total incapacity did not exceed seven days, an employer not being called upon under the Act, to report such accidents. However, notwithstanding the instructions issued to this effect there were, as mentioned above, 2,231 such cases reported to the Board. In addition, 944 claims were not allowed because there was no accident such as would fall under the provisions of the Act. In 1,361 cases the injured person did not make a claim, while in 690 cases the employer was found not to be subject to the Act. There were 178 cases in which two files had been opened for the same accident.

New Medical Tariff.—The report draws attention to the new medical tariff fixing the fees payable to physicians, surgeons, nurses and hospital establishments that have been called upon to render services to workmen who have been victims of accidents. This tariff was given in the Labour Gazette, February, 1930, page 161.

Features of the Year.—The Board expresses gratification that in the great majority of accidents, the degree of permanent incapacity does not exceed 20 per cent. According to the tabular statistics, accident frequency is greatest in the lumbering industry, with manufacturing in second place. The report comments on the large number of accidents suffered by workmen under twenty-one years of age, and asks if this special liability of younger workers is attributable to carelessness and lack of experience. The tabular summary indicates that of the total of 21,377 accidents, 3,959 were sustained by minors.

Dealing with the experience of administration during the year, the report observes that the interested parties were found to be not sufficiently familiar with the provisions of the statute, and the hope is expressed that when the law is better understood, misunderstandings will disappear. It is stated that, in general, the present legislation has materially benefited injured workmen. While experience would doubtless suggest useful amendments, the report cautions the legislature against hasty changes in its provisions.

The accompanying tables indicate (1) the number of accidents according to industrial groups and (2) the total average compensation according to industrial groups.

NUMBER OF ACCIDENTS IN 1929 INVOLVING PAYMENT OF COMPENSATION

Class	Tempory incapacity	Permanent incapacity	Death	Totals
Building or demolishing	2,779	402	31	3,212
Factories or workshops	5,059	804	22	5,885

Workmen's Compensation in Quebec

The Workmen's Compensation Commission of the Province of Quebec, issued on March 10, the following statement as to the procedure to be followed in cases in which an injured person is operated upon by a surgeon of his own choice.

"Several cases have arisen where the injured person making a claim under the Workmen's Compensation Act, 1928, has been operated on by a surgeon of his own choice, without advice to his employer and before obtaining a decision of the Commission.

"In the majority of such cases, the surgical intervention has eliminated all the elements of proof or control as to the nature and the cause of the accident suffered by the injured person and this practice has, up to the present, given rise to certain abuses against which the Commission feels called upon to protest.

"In consequence, the Workmen's Compensation Commission rules and orders:—

"10. Except in cases of real urgency, no injured workman shall be operated upon, except by a surgeon chosen by the employer, without giving preliminary notice in writing to the Commission and to the employer.

"The notice may be given either by the surgeon or by the injured person; it should be deposited in the Post Office under registered cover five full days before the date of operation, and must indicate the date, hour, place and the nature of the intervention proposed.

"20. On receipt of this notice, the doctor designated by the employer or the insurer may:—

(*a*) make an examination of the injured person at any time, and

(*b*) be present at the operation if he so desires.

"Failure to comply with the above mentioned ruling will be considered by the Commission as a serious presumption against the validity of all such claims and will expose the injured person and his surgeon respectively to the possibility of rejection of the claim for an indemnity and professional fees according to the circumstances."

REGULATIONS OF THE WORKMEN'S COMPENSATION BOARD OF SASKATCHEWAN

THE *Saskatchewan Gazette,* March 29, 1930, published the Regulations of the Workmen's Compensation Board under the Workmen's Compensation Act, 1929, to take effect on April 29, 1930. These regulations, which were approved by the Lieutenant Governor in Council on March 21, are as follows:—

Regulations of The Workmen's Compensation Act, Saskatchewan

GENERAL PROVISIONS

Assessments how levied and payable:

Regulation 1.

Assessments shall be levied provisionally upon the estimate of payroll given by the employer, or, in case no estimate has been given by the employer, or in case the estimate given by the employer is deemed by the board to be too low, upon an estimate fixed by the board.

Provided that in no case shall any assessment be less than twenty ($20) dollars.

Except where otherwise fixed by the board, provisional assessments of forty ($40) dollars or under and all minimum assessments shall be payable in full within one month after mailing of notice of assessment, and provisional assessments of more than forty ($40) dollars shall be payable in two equal installments the first within one month after mailing notice of assessment and the second without further notice on September first in each and every year beginning with the year 1930.

Any credit due the employer shall be applied on the provisional assessment in the order of the falling due of the instalments payable.

After the actual payroll for the year has been ascertained, adjustment shall be made, and any balance found due by an employer by reason of such adjustment shall be paid with the first instalment of the next provisional assessment.

Regulation 2.

For the purposes of assessment except as the board may otherwise decide, an industry is to be regarded as a unit, including its various operations—e.g. the working of a building contractor may, if done directly by himself and not sublet, include excavation, concrete work, erection of steel, carpenter, brick-laying or stonework, lathing, plastering, plumbing and heating and other employment incidental to such work, and unless a substantial part of the work is extra hazardous, such as abnormally deep excavation or considerable quantities of steel construction, the general industry rate of assessment will be applied to the whole operation.

Regulation 3.

All work sublet in any industry shall be rated for its particular class or group if the rate is higher than the general industry rate, e.g. a contract for steel construction shall bear the rate for that class of work if the rate is higher than the general industry rate.

Operations so intermingled with or close to other operations bearing a higher rate as to share the hazard of the latter, shall be rated at the rate of the latter. Other operations so intermingled as to prevent proper assignment of accidents are to be separately rated but all put into the class and group to which the preponderating part belongs.

Regulation 4.

Every employer shall in the year 1930 on or before the twentieth day of May and in each succeeding year on or before the twenty-first day of January deliver at the office of the board or if delivery is made by His Majesty's post deposit in His Majesty's post office in sufficient time to reach the board on or before the said dates the payroll statement required by the Act to be furnished by the employer.

Regulation 5.

Any industry for which a payroll statement under section 89 of the Act giving estimate of payroll for the latter half of 1930 and after 1930 for the whole of the year has not been furnished in 1930 on or before the twentieth day of May, 1930, and in all subsequent years on or before the twenty-first day of January in that year shall for the year in which the default occurred bear an additional assessment of 5 per cent of the ordinary assessment, and where the default continues longer than the fifth day of June, 1930, and the twentieth day of February in subsequent years a further 1 per cent for each month or fraction of a month of such further default and where an employer commencing or recommencing business does not furnish statements forthwith to the board an additional assessment of 5 per cent of the ordinary assessment shall be charged, and where the default continues for more than one month a further 1 per cent for each month or fraction of a month of such further default. The additional assessments in each of the above cases shall in no case be less than five nor more than five hundred ($500) dollars.

Regulation 6.

In the year 1931 it shall be the duty of every employer to furnish to the board a statement of his actual payroll for the latter half of 1930 and in every succeeding year for the whole of the preceding year which statement shall accompany the statement of estimated payroll for the current year and shall be furnished the board on or before the twenty-first day of January of that year and failure to transmit such statement or the furnishing of a false statement shall subject the employer to the liability to pay not only interest as hereinbefore set out on his current assessment on estimated payroll, but also interest as aforesaid on any deficiency of assessment in the actual payroll for the preceding year when finally determined or estimated by the board and interest charged on any deficiency of assessment for the preceding year charged by reason of the default of the employer in furnishing statement of actual payroll for the preceding year shall be subject to the provision of a minimum payment of five ($5) dollars but not limited by any maximum.

Regulation 7.

In addition to the payment of interest as above set out, every employer in default in any manner above set out shall be liable to incur a penalty not exceeding five hundred ($500) dollars to be recovered on summary conviction.

Regulation 8.

Any employer failing to pay any assessment or special assessment or any prescribed portion thereof within one month after notice thereof has been mailed to him shall pay as a penalty for such default 5 per cent of the amount for which he is in default and if a further month or more elapses before payment an additional 1 per cent for every additional month or fraction thereof that default continues. In respect of the second instalment, first September is to be considered the date of notice. In adjustments involving added percentage the final percentage is to be computed on the actual payroll at the adjusted rate.

Regulation 9.

In adjustment of assessments upon actual payrolls for the preceding year if the actual payroll is more than double the estimate of payroll, interest at 5 per cent (absolute) is to be charged upon the difference between what the assessment would have been on the actual payroll and what it was on the estimate of payroll and in default of payment of the adjusted assessment and interest a further increase shall be paid by the employer as provided in the preceding paragraph.

Regulation 10.

In adjustment of assessments for the preceding year after actual payroll for preceding year has been ascertained, if the actual payroll is less than half the estimate of payroll and all the provisional assessment has been paid not later than September thirtieth, interest at 5 per cent absolute is to be allowed on the difference between the amount paid and what the assessment at the provisional rate would have been if the estimate had been the amount of the actual payroll (exclusive in each case of additional assessment or added percentage).

Regulation 11.

To enable a member of the family of an employer or the dependents of such member to claim compensation under The Workmen's Compensation Act it shall be necessary that the employer not only carried such member of his family on his payroll at the time of the accident and included the wages of such member of his family in his last statement furnished to the board under section 89 of the Act but it shall also be necessary that the amount of such wages paid or to be paid to such member of the family shall be shown specifically and individually on the then last payroll statement furnished the board.

Regulation 12.

An employer or partner or an executive officer of a limited company is not covered and his wages are not assessed unless election to be covered is made in strict conformity with section 13 of the Act.

Regulation 13.

For the purposes of section 13 the term "executive officer" shall include directors, president, vice-president, secretary and treasurer and other duly elected or appointed executive officers of the company but shall not include superintendents or managers who are not corporation officers.

Regulation 14.

It shall be the duty of every principal who has let work to a contractor before the principal's payroll statement to the board has been furnished for the current year to ascertain and satisfy himself that his contractor has forwarded to the board a payroll for the work undertaken by him in accordance with the provisions of the Act and if he has not done so to include such work in the principal's estimated payroll and in work let to a contractor after the current year's payroll has been furnished by the principal to at once notify the board of the letting of the work and give an estimate of the payroll in connection therewith and if the contractor does not in accordance with the provisions of the Act furnish a payroll to the board the principal shall in furnishing a statement of his actual payroll for the year include the payroll in connection with such work let by him to the contractor and shall in all cases be liable for the assessments on the payroll in connection with the work let to the contractor and to make good any default of the contractor and shall be entitled to be indemnified by the contractor and to withhold out of any moneys due to the contractor any amounts which he has paid to the board on account of the contractor.

Regulation 15.

For greater certainty in some cases and in other cases due to the scattered, sporadic and transient nature of the work and the obvious impracticability of obtaining any record thereof and the undue expense which would be involved in administration, the following industries are wholly excluded:—

(*a*) The business of a florist or seedsman, seed-growing, gardening and horticulture; the keeping or breeding of live-stock, poultry or bees; fruit-growing; the picking, grading, packing, hauling, handling and storage of wool, fowl, fruit or vegetables, or products other than grain carried on by co-operative associations or companies, whose membership or shareholders are limited to the producers of such wool, fowl, fruit, vegetables or products other than grain and whose object is to bring about more satisfactory handling and sale thereof and not to carry on such work or operations as a business for profit or gain.
(*b*) Hand laundries.
(*c*) Barber shops and shoe shine establishments.
(*d*) News vendors.
(*e*) Undertaking and funeral directing.
(*f*) Skating or curling rinks.
(*g*) Educational, hospital and surgical work, medical work, veterinary work and dentistry.
(*h*) Retail mercantile business and wholesale mercantile business except as specifically included in paragraph 36 of Schedule I according to the classification in the Act, or carried on by a manufacturer whose factory is within the province. Commercial travellers are considered excluded unless employed by a manufacturer whose factory is within the province, unless they fall within the provisions of regulation 19.
(*i*) Hotel keeping and restaurant keeping.
(*j*) Auctioneers.
(*k*) All operations in connection with flying machines except the manufacture thereof.
(*l*) Taxidermy.
(*m*) Junk dealing.
(*n*) The business of an architect.

(*o*) Excavation other than as expressly mentioned in the rate classification or as included in other industries.
(*p*) Photographers.
(*q*) Window cleaners except when employed in a window cleaning business conducted as a regular industry which pays the regular rate of assessment for such industry or in an industry included in schedule I and regularly employed in such industry.
(*r*) Millinery except in a factory.
(*s*) Making up of fabrics in any form or of clothing or repairing except in a factory.
(*t*) Volunteer employees of all kinds except in mine rescue work.
(*u*) Radio dealers.
(*v*) Watch, clock and jewellery repairing.
(*w*) Chimney sweeps.
(*x*) Boat and canoe livery.
(*y*) Employees of race tracks and annual exhibitions.
(*z*) Fishing, ship building, operation of and work upon wharves, operation of dry docks, operation of steam vessels, works for the purpose of the business of a navigation company or used or to be used in connection with its business and all other navigation, towing, operation of vessels and marine wrecking.
(*a*1) The business of an optician.
(*a*2) Boot and shoe repairing.
(*a*3) Harness repairing.
(*a*4) Manufacture or erection of awnings or tents in an industry not principally or wholly engaged therein or in an industry not otherwise included in schedule I.
(*a*5) Surveyors and their employees.
(*a*6) Threshing and hauling of grain from a farm.
(*a*7) Weed inspectors or weed cutting.
(*a*8) Auditors.
(*a*9) Health inspectors.
(*a*10) Poundkeepers.
(*a*11) Erection of bill boards and bill posting.
(*a*12) Grave digging and cemetery workers, unless they fall within the provisions of regulation 18.
(*a*13) Swimming and wading pools and amusement grounds.
(*a*14) Sports club employees.
(*a*15) Gymnasiums.
(*a*16) Janitors unless employed in an industry under schedule I of the Act.

Regulation 16

Each of the following industries when carried on as part of, in immediate connection with and for the purpose of an exclusively retail store is excluded from the operation of Part I of the Act.
(*a*) Sausage manufacturing.
(*b*) Meat cutting.
(*c*) Coffee grinding.
(*d*) Delivery of goods.

Regulation 17

Employment by a parks board in a city or town or employment directly by a city or town of workmen to do the same nature of work as is done by a parks board, and employment in or about a cemetery in a city or town owned by a city or town or a commission or board controlled by a city or town and whether within or without the corporate limits, is added to class 19 group 9 according to the reclassification.

Any such employment not carried on as hereinbefore set out in this paragraph is wholly excluded from the operation of the Act.

Regulation 18

Distributors of farm machinery and implements and repairs for and parts thereof for a manufacturer within or without the province or for an agent of such manufacturer when such distributors are the primary source within the province from which such merchandise may be obtained are as to mechanics and artisans employed wholly or partly as such added to class 11 group 0 and as to all other employees and including clercial help added to class 18 group 5 of the reclassification.

Distributors of such merchandise who do not furnish the primary source within the province from which such merchandise may be obtained and who whether on consignment or purchase and resale or otherwise deal in such merchandise as retailers thereof are deemed to carry on an industry not within the Act and such industry is wholly excluded as to all operations.

Regulation 19

The interpretation of words and phrases provided in the interpretation clauses of The Workmen's Compensation Act shall apply to these and all other regulations of The Workmen's Compensation Board.

Regulation 20

Except where otherwise specifically provided every industry which, if carried on by an employer carrying on no other industry, would not be under the operation of Part I, is excluded from the operation of Part I where it is carried on by an employer who is also carrying on an industry or industries which is or are under the operation of Part I.

Regulation 21

Subject to any other regulation of the board every undertaking which consists of work or service (for example the delivery of goods), for which no direct charge is made and which is incidental to an industry under Part I carried on by the employer who performs or renders such work or service, is added to or included in the class in which such industry is included; and when such undertaking is incidental to an industry not under Part I, it is excluded from the operation of Part I.

Regulation 22

Subject to any other regulation of the Board, every undertaking which consists of work or service for which a direct charge is made and which is connected with but not part of an industry (whether such industry is under Part I or not) carried on by the employer who performs or renders such work or service, and which work or service is carried on separately would be an industry under the operation of. Part I, is added to or included in the class of industries in which such undertaking if carried on by itself would be included.

NOTE.—The above regulation which deals with the matter of general interpretation provides in effect that an industry and all operations in or incidental to it shall be regarded as a unit and that only operations that are carried on as a business are to be considered industries within the meaning of schedule I. For example, teaming done by a lumberman in

his lumber manufacturing business is included as part of that business and teaming done by a grocer for his grocery business is considered part of that business and is excluded with it from schedule I and in neither of these cases is the teaming considered to be the industry of teaming within th meaning of paragraph 36 or paragraph 51 of schedule I.

Regulation 23

Unless otherwise specially provided, anything not itself carried on or done by the employer as a business or trade or for profit or gain, which, but for this regulation would be an industry included in schedule I is excluded from the operation of Part I of the Act except where it is carried on or done as a part of or process in, or incidentally to, or for, or for the purpose of an industry in schedule I which is carried on as a. business or trade or for profit or gain; and where anything not itself carried on or done (by the employer as a business or trade or for profit or gain is carried on or done) as a part of or process in, or incidentally to, or for or for the purpose of an industry in schedule I which is carried on by the employer as a business or trade or for profit or gain it shall be included in the class in schedule I in which such last mentioned industry is included.

Regulation 24

Notwithstanding anything elsewhere herein contained any construction work undertaken by an employer who is not regularly engaged in such business and who is not otherwise an employer within schedule I and who engaged in such construction work not as a regular trade or business, for example a person, firm or corporation who or which is entering into such operations as an isolated undertaking and for its own purposes only or as a further example an owner who becomes an employer for the purpose of erecting a building for his own use on his own premises and is not generally in the building business shall come within the operation of schedule I as to those employed by such person, firm or corporation as artisans and mechanics and shall be deemed to the extent in this regulation set out to come within the provisions of paragraph 41 of schedule I and it shall be the duty of such person, firm or corporation immediately upon entering upon such undertaking to notify the board thereof and to return a payroll in connection therewith.

Regulation 25

(1) For greater certainty, operations carried on by a person whose busines is substantially farming, provided less than six workmen other than farm labourers are usually employed therein, are declared not to have been included in and are excluded from the operation of Part I.

(2) Every employer shall post up and keep posted up in conspicuous places within easy access of his workmen and where his workmen shall most readily see such notice such card or pamphlet of information concerning the Act as may be supplied to him by the board and a copy of the Act if so directed and it shall be the duty of every employer to make application to the board for such card or pamphlet of information for the purposes aforesaid.

Regulation 26

Every employer having fewer than twenty-five (25) workmen usually employed shall provide and maintain in his factory, shop, warehouse or other place of employment or in each factory, shop, warehouse or other place of employment if he has more than one, a first aid kit or box containing the following supplies with such additional quantities as may be reasonably necessary to provide first aid to his injured workmen and shall have the same in charge of some suitable person.

MINIMUM FIRST AID KIT

A standard first aid manual:

Instruments: 1 pair scissors, 1 pair tweezers, 2 eye droppers, 1 camel's hair brush, 2 dozen safety pins, assorted, 1 tourniquet, 1 graduated medicine glass, 1 porcelain or white enamel wash basin, ½ dozen finger stalls, 3 eye shields.

Drugs: 2 ounces powdered boracic acid for eye wash, 2 ounces aromatic spirits of ammonia, 1 (2 ounce) bottle of boracic tablets, 4 ounces tincture of iodine for external use, 1 tube of vaseline, carbolated, 4 ounces olive oil (for dressing for burns or eye injuries), 1 recognized antiseptic for washing wounds, Burn dressing, *e.g.* bicarbonate of soda mixed with vaseline (3 per cent).

Each of the above must be in bottles or containers plainly labelled and the specific purpose for which the contents are to be used marked thereon with clear and plain directions as to the methods of use and the strength of any solution to be used and all antiseptics or other substances dangerous if taken internally shall be plainly marked in red letters "poison".

Dressings: 3—1 ounce packages absorbent cotton, 3—1 yard packages sterile gauze, 6 sterile gauze bandages assorted sizes, 3 triangular bandages, 1 roll adhesive plaster, splints of assorted sizes.

The above equipment shall be examined and checked over at least once per month by the person in charge thereof and must at all times be kept in a clean place free from dust or dirt and in a place readily accessible to all the workmen.

Regulation 27

Every employer having twenty-five (25) or more workmen usually employed shall provide and maintain in his factory shop, warehouse or other place of employment or in each factory, shop, warehouse or other place of employment if he has more than one, a room thereof which shall be available and suitable for use as a first aid room and which shall at all times be kept sanitary and in charge of a clerk, workman, nurse or other person who has taken a course in first aid to the injured, the following equipment and supplies as minimum requirements.

FIRST AID ROOM EQUIPMENT

A standard first aid manual:

Furnishings: Hot and cold water, I porcelain or white enamel wash basin, I cabinet for surgical dressings, 1 porcelain or white enamel foot bath, 1 enamelled refuse pail, 1 metal box fitted with emergency dressings to be used by first aid man when required to attend injured men in factory who cannot be immediately removed to first aid room, 1 carrying stretcher, ½ dozen finger stalls, 3 eye shields.

Instruments: 1 pair scissors, 1 pair tweezers, 2 eye droppers, 1 camel's hair brush, 2 dozen safety pins, assorted, 1 torniquet, 1 graduated medicine glass, 1 porcelain or white enamel wash basin.

Drugs: 2 ounces 4 per cent boracic acid for eye wash, 2 ounces aromatic spirits of ammonia, 1 (2 ounce) bottle of boracic tablets, 4 ounce tincture of iodine for external use, 1 tube vaseline, 4 ounces olive oil (for dressing for burns or eye injuries), 1 recognized antiseptic for washing wounds, burn dressing, *e.g.*, bicarbonate of soda mixed with vaseline (3 per cent).

Each of the above must be in bottles or containers plainly labelled and the specific purpose for which the contents are to be used marked thereon with clear and plain directions as to the methods of use and the strength of any solution to be used and all antiseptics or other substances dangerous if taken internally shall be plainly marked in red letters "poison."

Dressings: 3—1 ounce packages absorbent cotton, 3—1 yard packages sterile gauze, 6 sterile gauze bandages assorted sizes, 3 triangular bandages, 1 roll adhesive plaster, splints of assorted sizes.

The above equipment shall be examined and checked over at least once per month by the person in charge thereof and must at all times be kept in a clean place free from dust or dirt and in place readily accessible to all the workmen.

Regulation 28

Every employer shall keep posted up throughout the works in every factory, shop, warehouse, or other place of employment the following notice and where non-English speaking workmen are employed such notice shall be posted in their different languages.

NOTICE

It is Dangerous to Neglect Injuries

Without proper care, blood poisoning or infection with serious consequences may result from slight injuries, such as cuts, punctures, scratches, slivers, burns, etc.

Workmen are urged to see that proper attention is given to all such injuries and to report immediately to the office of first aid officer.

Every employer must keep a first aid kit where it will be handy for your treatment.

Posted by direction of The Workmen's Compensation Board.

Regulation 29

A minimum first aid kit as above described or a first aid equipment satisfactory to the Workmen's Compensation Board shall accompany every crew in any employment within the provisions of the Act where the nature of the employment requires such crew to move from place to place.

Regulation 30

The board, where it deems the circumstances justify it, may direct or approve any addition to or reduction or variation in the first aid service for appliances above prescribed, or may in any case not above provided for prescribe such first aid service and appliances as it deems warranted.

Regulation 31

For greater certainty, continuation of an industry and reconstruction, alteration, repair, demolition, taking care of, or making ready for sale the plant or property of an industry or business in schedule I in insolvency, bankruptcy, or winding up proceedings, or under receivership of assignment for the benefit of creditors are added to the class to which such industry belongs.

Regulation 32

The fifty-four (54) classes of industries set forth in schedule I of the Act are reclassified so as to constitute twenty (20) classes and certain of these classes are subdivided into groups. The reclassification of the original classes and the subdivision of these reclassified classes into groups is as appended hereto and the classes and groups as appended hereto are hereby declared to replace the original classification under the Act.

The classification of industries is omitted.

WORKMEN'S COMPENSATION IN ONTARIO

Changes in Rates of Assessment for Various Industries in 1930

THE Ontario Workmen's Compensation Board has published in pamphlet form the 1929 adjusted assessment rates, and the provisional rates to be assessed on industries in the Province for 1930. In addition, the general provisions of the Act are outlined, and the method of rating explained.

It is pointed out that "for assessment and compensation purposes under the Act the industries covered are divided into 24 classes. Each class stands upon its own footing and carries its own burden, except that a very small general fund, known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may arise in any class. With the exception of this Disaster Reserve the moneys collected are just what are considered necessary to take care of the accidents that have actually happened. Separate accounts are kept of all assessments received, and all compensation and medical aid awarded for each of these classes. Each of the 24 classes of industry is thus in effect a mutual insurance association of the employers in that class. The rates for each class are fixed and the assessments made much in the same way as a municipality levies its taxes. They are governed by the requirements. The rates fixed for the year are intended to cover the burden for that year. At the beginning of the year

each employer is required to furnish the Board with an estimate of his probable pay roll for the year and he is assessed provisionally upon that estimate. At the end of the year the actual amount of pay roll is ascertained and rate provisionally fixed being also altered where the accident experience shows this to be necessary.

The rates are fixed in accordance with the accident experience of each industrial group. If it is seen that the rate charged has produced just sufficient money, or if the surplus or deficit is small, the existing rate will be maintained. If there is any considerable difference, it will be increased or decreased accordingly. It is to be remembered always that any surplus to the credit of a class remains in the class funds, and this is also taken into consideration in fixing the rates. All industries in the same class do not necessarily, nor usually, bear the same rate. The classes are subdivided into groups, and even within the group the rates are different where this is shown to be justified.

Describing the system of merit rating, the Board states that "individual distinction between employers even in the same line of industry is made according to their accident experience by a system of merit rating. Where the accident cost falls short of the amount of assessment by a stated percentage a merit rating refund, within specified limits, is made accordingly. Merit rating for the period including the years 1926, 1927 and 1928, is being made, and it is the purpose of the Board to give merit refunds annually, based on the accident experience of each firm for the three preceding years and taking the amount of assessment paid for the last year of the three-year period as the basis of the computation."

The Act also provides for additional assessments for a delay in submitting payroll statements, and for an added percentage in any case where an employer fails to pay any assessment, or prescribed portion thereof, within one month after receiving notice.

Assessment Changes in 1930

The table of rates is based on per $100 of payroll in all classes.

In Class 2, the rate for pulp mills and manufacturers of fibre board is raised from $1.50 to $1.60 per $100 of payroll; while in the same group, the rating for pulp and paper mills is increased from $1.40 to $1.50.

In Class 5, group 7—nitro-glycerine, dynamite or other high explosives manufacture, or shell testing—there is a marked increase in the rate, from $1.00 to $5.00. In this same group the rate for fireworks or torpedo manufacturing is increased from $1.00 to $5.00. Other increased ratings in this group are as follows: fuse manufacture from 60 cents to $3; small arm cartridges manufacture, from 40 cents to $2.00; loading and fixing artillery ammunition, from 80 cents to $4.00.

There are two decreases in the rates assessed for 1930:—In Class 6, (sand and gravel pit operation, with machine power) there is a reduction from $4.50 to $2.25. In Class 7, the rate for iron smelting with blast furnaces is reduced from $3.00 to $1.50.

In Class 9, the group including the manufacture of metal siding roofing, shingles, window frames, as well as the manufacture of steel drums or barrels, has a rate increase from 90 cents to $1.00.

The last part of the pamphlet lists the industries excluded and included under the Act.

WORKMEN'S COMPENSATION LEGISLATION IN THE UNITED STATES AND CANADA

THE Bureau of Labour Statistics of the United States Department of Labour recently published a bulletin (No. 496 of the Workmen's Compensation and Insurance Series) dealing with Workmen's Compensation Legislation of the United States and Canada as of January 1, 1929, with text of legislation enacted in 1927 and 1928 (a previous Bulletin in this series was noticed in the Labour Gazette, April, 1927, page 395).

The report points out that "the adoption of workmen's compensation for industrial injuries in lieu of the rule of the employers' liability for injuries due to his negligence stands out in its effect on the status of the worker as one of the most important legal-economic developments of modern times. A right to relief based on the fact of employment, practically automatic and certain, replaces the doubtful contest for a recovery based on proof of the employer's negligence and of the absence of the common-law defenses."

Abroad, Germany in 1884, and Great Britain in 1897 and 1906, were influential in turning attention to the system of benefits for injuries due to employment, not necessarily to the negligent act of the workman concerned. The first official recognition of the principle by the Congress of the United States was the Federal act of 1908, providing limited

benefits for designated classes of employees of the United States; though acts of 1882 (Life Saving Service) and 1900 (Postal Service) had made some provision of this nature for the services indicated. Concurrently with these dates the subject came to attract general attention from State legislatures. Investigative commissions began to be provided for as early as 1903 (Massachusetts) and 1905 (Illinois), but no legislative results followed. All the states of the Union had workmen's compensation acts at the beginning of the year 1929 except five (Arkansas, Florida, Mississippi, North Carolina, and South Carolina). In addition to these 43 State acts, the Bulletin covers the four territorial acts (those of Alaska, Hawaii, Philippines, and Porto Rico), the act for the District of Columbia, the act for longshoremen, and that for the United States civil employees.
